The Evolution of Resource Property Rights Anthony Scott, 2008-03-27 Individuals rights to use natural resources have long existed This book traces the historical development of these rights and looks at how individuals rights

have evolved Each chapter focuses on a single natural resource property right noting the impact of technology the role of the common law courts and the increasing role of government

**Invasive Forest Insects, Introduced Forest Trees, and Altered Ecosystems** Timothy D. Paine, 2007-05-24 Demand for timber and fibre continues to grow and is being met by increased reliance on plantation forestry Many of the plantations that are being grown around the globe are non native species that have characteristics of rapid growth and good commercial qualities In some cases the high rates of production are a result of the absence of native herbivore and diseases This limited pest status is threatened as pest species move around the globe At the same time there is concern about threats of these non native plantation species on native communities and the impact of changing climates on forest productivity This volume explores many of these issues for the first time

Tropical Forest Ecosystems Structure and Function V.P. Singh, 2004-10-01 Tropical forests are vital for social economic and ecological reasons They play an important role in ecosystem processes such as the biogeochemical and hydrological cycle they provide habitat for wildlife and serve as source of biodiversity and they offer protection against soil erosion Kremen et al 2000 and Condit et al 2002 The forest contains large trees standing 30 to 50 meters in height creating continuous canopy of foliage The enclosed canopy shades tree forest floor inhibiting the development of much undergrowth creating an open forest formation Piercing into the tree canopy reveals a multistory appearance of broad leaf evergreen vegetation The forest is a treasure trove of different animal and plant species Forest and woodlands cover nearly 40% of the earth's land surface and they are the most biologically diverse ecosystems in most part of the world The tropics consist of a diversity occurring between the latitudes of the tropic of Cancer and the tropics of Capricorn north and south of the equator These ecosystems are currently experiencing the highest rates of destruction in the world More than 90% of dry forests have been destroyed and less than 2% of what remains is protected Because of the climatic and forest structure dry forests are easier to clear for agriculture the soil is more fertile and the land is more suitable for livestock Forest area has increased slightly since 1980 in industrial countries but has declined by almost 10% in developing countries Tropical deforestation probably exceeds 1 30 000 sq km a year Less than 40% of forest globally are relatively undisturbed by human action Many developing countries today rely on timber for export earnings at the same time millions of people in tropical countries still depend on forests to meet their every need Since time immemorial forest has provided a valuable source of economic life for human populations Yet the ways in which forests are used and valued depends largely on people's economic needs and priorities in a particular place or at a particular time balanced against the relative scarcity or abundance of forest resources Over recent years a complex array of social economic and political changes have altered human demands on forest These changing demands have had devastating impact on forest status and integrity

This book is an outcome of the own work experience and research on tropical forest for the last 30 years I hope this will provide to readers concise sufficient and recent information on tropical forest of the world      Forest Planning at Landscape Level Kailash Chandra Bebarta,2007 Study conducted at Rajnandgaon District of Chattisgarh India      Which Way Forward Carol J. Pierce Colfer,2010-09-30 Indonesia contains some of Asia s most biodiverse and threatened forests The challenges result from both long term management problems and the political social and economic turmoil of the past few years The contributors to Which Way Forward explore recent events in Indonesia while focusing on what can be done differently to counter the destruction of forests due to asset stripping corruption and the absence of government authority Contributors to the book include anthropologists economists foresters geographers human ecologists and policy analysts Their concerns include the effects of government policies on people living in forests the impact of the economic crisis on small farmers links between corporate debt and the forest sector and the fires of the late 1990s By analyzing the nation s dramatic circumstances they hope to demonstrate how Indonesia as well as other developing countries might handle their challenges to protect biodiversity and other resources meet human needs and deal with political change The book includes an afterword by Emil Salim former Indonesian Minister of State for Population and the Environment and former president of the Governing Council of the United Nations Environment Programme A copublication of Resources for the Future and the Center for International Forestry Research CIFOR and the Institute for Southeast Asian Studies ISEAS
