Reclamation Of Contaminated Land:

Assessment and Reclamation of Contaminated Land R M Harrison, R E Hester, 2007-10-31 Contaminated land and the methods and legal controls governing its reclamation for subsequent development and use are of great current interest and concern This volume covers aspects of this subject ranging from the origins and extent of contaminated land problems including effects on human health through investigative measures to specific techniques of remediation It is written in the context of the new UK contaminated land regime and includes human and ecological risk assessment methodology and the legal liabilities and insurance aspects of contaminated land This authoritative review will be welcomed by those involved in the areas of land use planning and development consultants and engineers in contaminated site investigation and remediation and environmental regulators Students of land management and environmental science will also find it essential reading

Reclamation of Contaminated Land C. Paul Nathanail, R. Paul Bardos, 2005-09-27 Land contamination is of global concern with many of the world's industries potentially harming the environment and human health Along with rapidly changing policy and technological developments this is an interdisciplinary area in which successful contaminated land management depends on the expertise of and interaction between a number of scientific and engineering disciplines Reclamation of Contaminated Land takes into account the different groups involved in contaminated land management and offers a flexible learning approach based on practical experience and research It presents an overview of the general skills and knowledge required encompassing both general management and regulatory practice and specific land contamination issues Divided into two parts Part I discusses site characterisation and the design of site investigations and the central role of conceptual models and risk assessment in decision making Part II discusses how risks from contaminated land are managed and the role of different remediation approaches to achieving this This book is of great value for 2nd 3rd 4th year undergraduates and MSc students in Environmental Science Environmental Technology Environmental Management Geography Geology Estate and Land Management It is also key reading for undergraduates and MSc students in Chemical Engineering Civil Environmental Engineering and Environmental Chemistry as well as professional planners and developers and local authorities

Reclaiming Contaminated Land T. Cairney, 2012-12-06 Chemically contaminated land has only recently been recognized as an immediate or long term potential hazard and published guidance on how to tackle such land has been sparse Indeed much of the available technical work emphasizes the risks and dangers rather than indicating safe and economical strategies of reclamation This book provides a comprehensive treatment of the important aspects of land reclamation Its basic aim is to dispel the myths that have become associated with the subject and to indicate methods and strategies that can be used for safe and economical reclamation The authors concentrate on the more important facets of reclamation and indicate where advice and information is more or less certain As in any newly developed field there are still uncertainties and for this reason not all the chapters contain equivalent amounts of detail All the authors have expertise in

the field of land reclamation and differences in emphasis between authors reflect the present state of the subject Overall the book emphasizes that contaminated land can be reclaimed safely provided that sufficient attention is paid to detail and that the proposed end use of the land is appropriate and based on a detailed knowledge of the site Contaminated Land

Michael A. Smith,1985-06-30 **Contaminated Land and its Reclamation** R E Hester,R M Harrison,2007-10-31

Contaminated land and the methods and legal controls governing its reclamation for subsequent development and use are of great current interest and concern This volume in the Issues in Environmental Science and Technology series contains seven articles which treat the many aspects of this subject ranging from risk assessment and risk management through specific remediation methods and the evolution of government policy and controls to analysis of the legal and technical features of specific environmental insurance policies The chemistry of the non ferrous heavy metals lead zinc and cadmium is examined in relation to reclamation of superfund sites in the USA alongside a consideration of the role of the Welsh Development Agency in developing strategies for the recovery of derelict and contaminated land An authoritative treatment of each of the topics is ensured by the particular expertise and distinction of the authors and as such Contaminated Land and Its

Reclamation will make an important contribution to the public debate on these issues It will be essential reading for all those groups of people directly or indirectly involved from consultants and their technical advisors through developers contractors and landowners to local authorities and government agencies with responsibility for policy and its implementation in this area **Contaminated Land** Peter B. Meyer,Richard H. Williams,Kristen R. Yount,1995 Contaminated land policy is a key

concern of governments and policy makers across the globe yet discussion has traditionally focused on the particular experience of the United States This major new book develops a framework for assessing laws and regulations regarding contaminated land and polluted properties their clean up and reuse and the assignment of costs and responsibilities for reclamation In Contaminated Land the authors a European and two Americans lay out a framework for cross national comparisons of policy contexts as well as ways of examining the outcomes of different approaches to contaminated land and systematically compare approaches to this issue in both the EU and US The use of this framework leads to a reassessment of specific policies such as the polluter pays principle which may be more successful in the EU than it has been in the US and subsidiarity which while problematic in Europe may hold promise in a US application Specific issues discussed include the nature and extent of the contaminated land problem legal implications regulation in the US the 1980 Comprehensive Environmental Liability Compensation and Reclamation Act European experience and EU environmental policy integrated comparative analysis and some lessons for the future Contaminated Land offers valuable insights on policy responses to the problem of badly polluted land from the perspectives of planning economics and sociology In particular this volume offers frameworks for comparison of different national settings to help determine the preferred and most promising approaches to contaminated land in any social economic and legal policy context Contaminated Land and Its Reclamation Ronald E.

Hester, Roy M. Harrison, 1997 This book deals with developments of a legal technical and professional nature and relates these to the methods of risk assessment and their application Key developments in the UK over the past twenty years including the Environmental Protection Act EPA 1990 the European Commission Green Paper on Environmental Liability the consultation paper Paying for our Past and the Framework for Contaminated Land are discussed **The Re-Use of Contaminated Land** Thomas Cairney, 1995-08-03 Former industrial and urban land is increasingly being recycled a practice which follows current political policy and is appropriate in the more heavily populated areas of Europe The contamination which soils and water below such land may have suffered due to past industrial activities could pose future risks to new occupiers or to the environment as a whole and therefore it is important that an assessment of the risk is undertaken before such land is re used This volume has been written specifically to assist developers consultants and planners who are involved in the reclamation of contaminated land in ensuring that such recycling does not expose the public or the wider environment to unacceptable risks It provides a clear rationale for why such risk assessments are needed outlines the current legislation regulating such activities and indicates where the responsibilities lie for control of this development Inevitably the assessment approach of this book draws mainly on UK experiences and regulations but the methodology and basic principles provided are universal and would be applicable when the safe recycling of contaminated land becomes a more important issue of development in other countries The risk assessment approach advocated in the book will be valuable to many developers of contaminated land since it is affordable and logical and adequately diagnostic to identify sites where re use will not be hazardous The book describes a comprehensive range of risks which have been given due consideration as potential problems when former industrial land is reused whilst also dispelling many of the vague and often unjustified concerns over land contamination **Reclamation and Redevelopment of Contaminated Land** Garrie L. Kingsbury, Tayler H. Bingham, 1992 **Contaminated Land** Griselda Pollock, 1998-03-19 Contaminated land is a problem both in the short and long term as it cannot be used without remediation The investigation and analysis of the problem along with the legal responsibilities surrounding the issues continue to present difficulties to those wishing to use or develop a contaminated site Since publication of the 1st edition the area *Contaminated Land* Michael A.
