Reconstructive Surgery of the Middle Ear Adolph Wolferman, 1970

Reconstructive Surgery of the Middle Ear

Jun'ichi Suzuki, 1999 This book will be a companion for the surgeon performing tympanoplasty Tympanoplasty is a unique operation which half a century ago appeared as the first functional surgery under microscopy in the history of medicine There are several different surgical approaches to any case of chronic ear disease and in each case the best method of tympanoplasty should be used The success rate of tympanoplasty should be high enough to be able to operate when there is only one hearing ear and a success rate of 100% is required Hence the objective of training ear surgeons is to obtain 100% confidence in their tympanoplasty Most ear surgeons would agree that closed method tympanoplasty is the best method of which two techniques can be chosen closed method intact posterior canal wall technique which requires more skills because of a limited visual field and the closed method posterior canal wall reconstruction method The latter is recommended in this book and is shown in detail from basic knowledge and information to expert advice The book shows some secrets for those who want to be independent surgeons and good enough to dare to operate on the only hearing ear The book is richly illustrated In addition it has the unique aspect of many Box articles Important issues appear again in Boxes where they are summarized Several Box articles on special subjects are contributed by colleagues who previously worked or studied in the authors hospital

Surgery and Pathology of the Middle Ear Jean F.E. Marquet, 2012-12-06 Dear colleagues Promotion of the development of ENT is one of the most important tasks of IFOS International Federation of Otorhinolaryngology Apart from organizing the World Congresses it supports different international and regional meetings organizes symposiums on well determined subjects etc Since the last World Congress in 1981 in addition to the Danube Symposium in 1982 and the Congress of ENT Societies in Asia Oceania in 1983 an international symposium was organized in Antwerp by the Belgian ENT Society on evaluation problems of middle ear surgery This is a very controversial question on which there is no consensus During a four day meeting many anatomical and pathological aspects operative methods possibilities of the evaluation of the results with computers were widely discussed You will find all the lectures presented in this book I am convinced that these papers will prove to be a good basis for further discussion and hope that finally we shall achieve an international agreement on the evaluation of our results in middle ear surgery My thanks go to Professor Marquet for organizing the meeting and for publishing the papers Professor Dr L Surjan President of IFOS 10 WELCOME Dear colleagues and especially dear Professor Marquet In my function as pro rector of the University of Antwerp I am very proud of welcoming you to the opening of the International Conference on The Postoperative Evaluation in Middle Ear Surgery It gives me the opportunity to stress the importance of this congress and to honour Prof Marquet

Grote,2012-12-06 The need for better implant materials was a stimulus for the increa sing knowledge of Biomaterial Scientists Different surgical disciplines were very successful in the use of prostheses especially because they based their surgery on a good cooperation with fundamental scientists The use of alloplastic implant materials in the reconstruction of the middle ear has not always been successful We

all know the initial success in the sixties and the disappointments after short term follow up periods Because of these failures Otolaryngology missed contact with the new developments in Biomaterial Science However we must realize that in the reconstruction of a sound conducting system our most successful results are achieved with alloplastic implants John Shea introduced the use of Teflon prostheses in the restoration of hearing in otosclerosis and ever since this has been the most rewarding reconstructive middle ear operation With the development of the intact canal wall techniques and the use of homologous implant materials the problems of middle ear surgery seemed to be solved However we now know that closed techniques have disadvantages after longer post operative periods and the use of homologous implant materials give problems Collection of these implants is not always easy and the preservation is still in discussion Furthermore problems of resorption rejection or fixation give uncertain post operative results Middle ear prostheses of different new implant materials are promoted by industry and good results are published but also disappointments after shorter or longer periods
