Trust and Records in an Open Digital Environment Hrvoje Stančić, 2020-12-30 Trust and Records in an Open Digital Environment explores issues that arise when digital records are entrusted to the cloud and will

help professionals to make informed choices in the context of a rapidly changing digital economy Showing that records need to ensure public trust especially in the era of alternative truths this volume argues that reliable resources which are openly accessible from governmental institutions e services archival institutions digital repositories and cloud based digital archives are the key to an open digital environment The book also demonstrates that current established practices need to be reviewed and amended to include the networked nature of the cloud based records to investigate the role of new players like cloud service providers CSP and assess the potential for implementing new disruptive technologies like blockchain Stan i and the contributors address these challenges by taking three themes state citizens and documentary form and discussing their interaction in the context of open government open access recordkeeping and digital preservation Exploring what is needed to enable the establishment of an open digital environment Trust and Records in an Open Digital Environment should be essential reading for data information document and records management professionals It will also be a key text for archivists librarians professors and students working in the information sciences and other related fields

Computer Medical Databases Morris F. Collen, 2011-10-20 Chapter 1 offers an overview of the basic computer technology Each succeeding chapter describes the problems in medicine followed by a review in chronological sequence of why and how computers were applied to try to meet these problems Only the technical aspects of computer hardware software and communications are discussed as they are necessary to explain how the technology was applied This approach generally led to defining the objectives for applications of medical informatics At the end of each chapter the author summarizes his personal views and interpretations of the chapter contents Although the concurrent evolution of medical informatics in Canada Europe and Japan certainly influenced workers in the United States the scope of this historical review is limited to the development of medical informatics within the United States Furthermore this review is limited to electronic digital computers it excludes mechanical analog and hybrid computers

A Framework for Records Management in

Relational Database Systems Ahmed Ayaz Ataullah, 2008 The problem of records retention is often viewed as simply deleting records when they have outlived their purpose However in the world of relational databases there is no standardized notion of a business record and its retention obligations Unlike physical documents such as forms and reports information in databases is organized such that one item of data may be part of various legal records and consequently subject to several and possibly conflicting retention policies This thesis proposes a framework for records retention in relational database systems It presents a mechanism through which users can specify a broad range of protective and destructive data retention policies for relational records Compared to naive solutions for enforcing records management policies our framework is not only significantly more efficient but it also addresses several unanswered questions about how policies can be mapped from given legal requirements to actions on relational data The novelty in our approach is that we defined a record in a relational database as an arbitrary logical view effectively allowing us to reduce several challenges in enforcing data retention policies

to well studied problems in database theory We argue that our expression based approach of tracking records management obligations is not only easier for records managers to use but also far more space time efficient compared to traditional metadata approaches discussed in the literature The thesis concludes with a thorough examination of the limitations of the proposed framework and suggestion for future research in the area of records management for relational database management systems

DATA SCIENCE CRASH COURSE: Drinking Water Potability Classification and Prediction Using Machine Learning and Deep Learning with Python

Vivian Siahaan, Rismon Hasiholan

Sianipar, 2023-08-06 In this data science crash course project we aim to build a classification and prediction model to determine the potability of drinking water using machine learning and deep learning techniques in Python The first step of the project involves data exploration where we examine the dataset's structure and characteristics We identify the target variable Potability which indicates whether the water is safe to drink 1 or not 0 We check for any missing values and handle them appropriately to ensure the dataset's integrity Next we analyze the distribution of features in the dataset to understand their statistical properties We visualize the feature distributions through histograms box plots and density plots This exploration helps us identify potential outliers or skewed features that might require preprocessing Before building the predictive models we split the dataset into training and testing sets The training set is used to train the machine learning models while the testing set evaluates their performance on unseen data To start with machine learning models we employ algorithms Logistic Regression Support Vector Machines K Nearest Neighbors Decision Trees Random Forests Gradient Boosting Extreme Gradient Boosting Light Gradient Boosting We use the Grid Search technique to optimize their hyperparameters ensuring the best possible performance After evaluating and selecting the best performing machine learning model we explore deep learning techniques using an Artificial Neural Network ANN The ANN architecture consists of input hidden and output layers We determine the optimal number of hidden layers and neurons through experimentation To train the ANN we use the training data and optimize the model's weights using backpropagation and gradient descent We also employ techniques like dropout and batch normalization to prevent overfitting After training the models we evaluate its performance on the test set To gauge the model's accuracy precision recall and F1 score we generate a classification report Additionally we plot the training and validation accuracy as well as the loss during the training process to visualize the model's learning progress For further insights we plot a confusion matrix which provides a comprehensive view of the true positive true negative false positive and false negative predictions This helps us assess the model's performance in handling different classes Throughout the project we prioritize model evaluation to ensure reliable predictions We compute the accuracy score which gives us an overall understanding of the model's correctness The classification report provides detailed precision

recall and F1 score for each class highlighting how well the model predicts the positive and negative cases In conclusion this data science crash course project focuses on drinking water potability classification and prediction using various machine learning and deep learning techniques in Python The project begins with data exploration and feature distribution analysis followed by the use of machine learning models with hyperparameter tuning through grid search Subsequently deep learning techniques using an Artificial Neural Network ANN are employed and the model s performance is evaluated using multiple metrics By following this comprehensive approach we aim to build an accurate and robust model that can effectively predict drinking water potability and contribute to ensuring safe drinking water for communities **Federal Register** ,1978
