Recycling Dr Flora Martin, 2022-08-31 Recycling is the process of converting waste materials into new materials and objects The recovery of energy from waste materials is often included in this concept The recyclability of a material depends on its ability to reacquire the properties it had in its original state Recycling continues to contribute to the sustainable management of plastic solid wastes PSWs and it s among the important approaches currently used for reducing the impacts of PSWs in the plastic industry It provides opportunities for reducing quantities of waste disposed of oil usage and carbon dioxide emissions Further opportunities in the form of job creation global warming reduction reduction of virgin material consumption reduction in landfill contamination etc It also presents demerits such as being costly contamination littering pollution etc The chapter outlines the concept of recycling with particular attention to plastics It discusses the two strategies of recycling open loop recycling and closed loop recycling These strategies are compared and the difference is that open loop recycling provides an opportunity for new product development while closed loop is confined to the original products Different recycling processes such as primary recycling secondary mechanical recycling tertiary recycling and energy recovery are discussed by focussing on the processes merits and demerits Recycling is contributing to the sustainable management of wastes and because of advances in technologies and systems for segregating collecting and reprocessing of recyclable wastes it is rapidly expanding It is creating new opportunities for integration with industries communities and the governments Although the level of recycling activities fluctuates over time the underlying driving forces point to the overall increase of these activities Recycling is both an economic as well as environmental activity As an economic activity recycling represents recovery of residual value from waste products As an environmental activity recycling is neither inherently positive nor negative Life cycle assessment methodology can be applied to the recycling process just like to any other process to assess the overall impact The environmental impact can be assessed in terms of local regional and global impacts Ecoprofile is a form of life cycle assessment but with the application of weighing factors which allow for comparison and rating of impacts A Brief Introduction to Recycling During the 1960s and 70s it was thought that emissions from factory chimneys and sewage pipes constituted the biggest environmental problem But since then due to new worldwide Eco laws these discharges have decreased considerably Instead the focus has switched to the environmental problems associated with the goods that are

produced and consumed in modern society Many of the most environmentally damaging substances are currently being supplied through glass bottles newspapers plastic bags coke cans cardboard boxes and sweet wrappers just to mention a few To tell you what recycling is and what the word actually embodies may seem strange to you I am sure all of you think you know exactly what it entails But in theory Computer recycling involves the separation and collection of materials for processing and remanufacturing old products into new products and the use of these new products completing the cycle Glass is one of the most common man made materials It is made from sand limestone and sodium carbonate and silica The ingredients are heated to a high temperature in a furnace until they melt together

Life Cycle Assessment in the Built

Environment Robert Crawford, 2011-03-10 Life cycle assessment enables the identification of a broad range of potential environmental impacts occurring across the entire life of a product from its design through to its eventual disposal or reuse The need for life cycle assessment to inform environmental design within the built environment is critical due to the complex range of materials and processes required to construct and manage our buildings and infrastructure systems After outlining the framework for life cycle assessment this book uses a range of case studies to demonstrate the innovative input output based hybrid approach for compiling a life cycle inventory This approach enables a comprehensive analysis of a broad range of resource requirements and environmental outputs so that the potential environmental impacts of a building or infrastructure system can be ascertained These case studies cover a range of elements that are part of the built environment including a residential building a commercial office building and a wind turbine as well as individual building components such as a residential scale photovoltaic system Comprehensively introducing and demonstrating the uses and benefits of life cycle assessment for built environment projects this book will show you how to assess the environmental performance of your clients projects to compare design options across their entire life and to identify opportunities for improving environmental performance

Geoenvironmental Engineering A.M.O. Mohamed, H.E. Antia, 1998-04-21 The new social and economic era calls for integration of ecology and economy in a system of cause and effect The central element in this shift is sustainable development Fundamental to the achievement of sustainable development is the requirement for environmentally responsible waste management and restoration of the environment Solutions to the complex problems confronted by waste management and environmental restoration industry are currently handled by the geoenvironmental engineering profession that needs a good background in soil biology chemistry mechanics mineralogy and physics In recognition of this need this book summarizes relevant aspects of various soil physics mineralogy and chemistry as well as the chemistry of pollutants This treatment will provide sufficient background to students and practicing engineers to enable them to think about how to approach waste management and environmental restoration problems
