Recycling, International Trade and the Environment P.J. van Beukering, 2013-03-09 During the last century international trade has become indispensable for many economies This is not only the case for trade in primary raw materials and consumer products but also for secondary recyclable materials With the rapid growth of the recycling sector worldwide trade in recyclables increased tremendously It is striking that most of this trade flows from developed to developing countries This book addresses the main causes of this typical trade pattern and investigates its economic and environmental effects by carrying out case studies on waste paper imports in India waste plastics imports in China and used tyre trade in Europe The book concludes by recommending policies that are aimed at preventing negative economic and environmental effects potentially resulting from trade in recyclables The book offers new ideas to researchers who are involved in international trade material flows and waste management and provides new insights for decision makers who are interested in WTO and the Basel Convention

Economics of Industrial Ecology Jeroen C. J. M. van den Bergh, Marco Janssen, 2004 Studies that integrate scientific technological and economic dimensions of industrial ecology and material flows The use of economic modeling techniques in industrial ecology research provides distinct advantages over the customary approach which focuses on the physical description of material flows The thirteen chapters of Economics of Industrial Ecology integrate the natural science and technological dimensions of industrial ecology with a rigorous economic approach and by doing so contribute to the advancement of this emerging field Using a variety of modeling techniques including econometric partial and general equilibrium and input output models and applying them to a wide range of materials economic sectors and countries these studies analyze the driving forces behind material flows and structural changes in order to offer guidance for economically and socially feasible policy solutions After a survey of concepts and relevant research that provides a useful background for the chapters that follow the book presents historical analyses of structural change from statistical and decomposition approaches a range of models that predict structural change on the national and regional scale under different policy scenarios two models that can be used to analyze waste management and recycling operations and adopting the perspective of local scale an analysis of the dynamics of eco industrial parks in Denmark and the Netherlands The book concludes with a discussion of the policy implications of an economic approach to industrial ecology
