The Routledge Handbook of Waste, Resources and the Circular Economy Terry Tudor, Cleber J.C. Dutra, 2020-12-27 The Handbook introduces, contextualises, critiques and discusses a range of perspectives associated with the concept of the circular economy. These perspectives span an array of subjects including economics, environmental policymaking, sociology, environmental science, environmental and industrial engineering, management, international development and human geography. A fundamental underpinning of the Handbook is that it takes account of a wide range of sectors as well as geographical perspectives that incorporate both a Global North and Global South world context. This approach is crucial because it is only within such a holistic perspective that the circular economy concept can truly be examined. In addition, these issues are examined both from a theoretical as well as a practical perspective using real world case studies for illustration. Given its wide subject, sectoral and geographical areas of focus, the Handbook should be of value not only for those undertaking research in the field of circular economy but also stakeholders involved in policymaking as well as decision making on the front line.

LTLGB 2012 Feng Chen, Yisheng Liu, Guowei Hua, 2014-07-08 The LTLGB 2012 conference is intended to bring together researchers and related government officials involved in low carbon transportation, low carbon logistics and green building. Environmental and Natural Resource Economics Jonathan M. Harris, Brian Roach, 2016-05-05 Harris and Roach present a compact and accessible presentation of the core environmental and resource topics and more with analytical rigor as well as engaging examples and policy discussions. They take a broad approach to theoretical analysis using both standard economic and ecological analyses and developing these both from theoretical and practical points of view. It assumes a background in basic economics but offers brief review sections on important micro and macroeconomic concepts as well as appendices with more advanced and technical material. Extensive instructor and student support materials including PowerPoint slides, data updates and student exercises are provided.

Enterprises' Green Growth Model and Value Chain Reconstruction Nengmin Wang, Qi Jiang, Bin Jiang, Zhengwen He, 2022-10-11 The goal of this book is to improve the ability of enterprises to implement the green growth model and value chain reconstruction. China's environmental development strategies such as carbon peak emission and carbon neutrality have created new challenges and requirements for enterprises to go green. In addition, anti-globalization and the complex dynamic uncertainty caused by COVID-19 have

changed the operational environment that enterprises face The application of new technologies including the new generation of information technologies and the whole process management technology provides solutions for the implementation of enterprises green growth model and value chain reconstruction Based on China s enterprise management cases this book reveals the connotative features of enterprises green growth model and their evolutionary regularities the overall framework and decision optimization of value chain reconstruction under the green growth model and the approach to implementing the green growth model and value chain reconstruction The theoretical framework of the green growth model and value chain reconstruction established in this book has enriched and developed the research results in this field Cases of enterprises implementing the green growth model can provide references for the green transformation of enterprises and help enterprises appreciate the synergy between sustainability and growth This book can also serve as a research reference for scholars engaged in the field of sustainable operations as well as decision makers and managers of relevant government departments
