

HOW RED WINE IS MADE

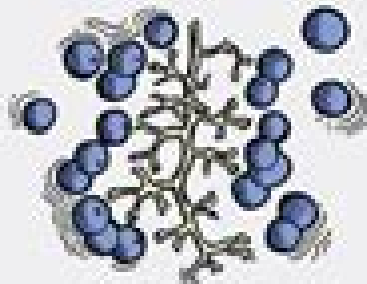

The easy guide to the wine-making process
in 12 simple steps for beginners

Harvest grapes

The vintage (harvest) period is the best time to pick the grapes. It's during this time that the grapes are at their peak. The weather is usually warm and dry, which is ideal for the grapes to ripen.

Prepare grapes

Before the grapes can be used, they need to be prepared. This involves removing the stems and leaves from the grapes. The grapes are then washed and dried. Some winemakers also use sulfur dioxide to prevent the grapes from spoiling.

Clarification

Clarification or 'fining' is the process of removing any remaining solids from the wine. This is done by adding a substance called 'fining' to the wine. The fining substance binds to the solids and is then filtered out. Some winemakers also use sulfur dioxide to prevent the wine from spoiling.

Press

After the fermentation process, the wine is pressed. This is done by using a press to squeeze the grapes. The juice is then collected and the skins are removed. The juice is then filtered and the skins are discarded.

Fermentation

After the pressing process, the wine is fermented. This is done by adding yeast to the wine. The yeast converts the sugar in the wine into alcohol. The fermentation process can take anywhere from a few days to several weeks.

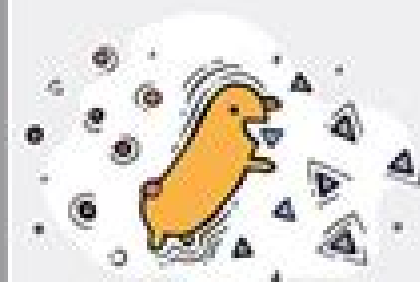

Add yeast

Before the wine can be fermented, it needs to be prepared. This involves adding yeast to the wine. The yeast converts the sugar in the wine into alcohol. The fermentation process can take anywhere from a few days to several weeks.

Bottling

Bottling is the final step in the wine-making process. The wine is poured into bottles and the bottles are sealed. The bottles are then stored in a cellar or a similar environment for a period of time before being sold.

Malolactic

Malolactic fermentation is a process that occurs in some wines. It is the conversion of malic acid into lactic acid. This process is often used to soften the wine and to give it a more complex flavor. It can also be used to prevent the wine from spoiling.

Aging

After the wine has been fermented, it is often aged. This is done by storing the wine in wooden barrels. The barrels allow the wine to breathe and to develop a more complex flavor. The aging process can take anywhere from a few months to several years.

Blending

The wine is often blended with other wines to create a more complex flavor. This is done by combining different wines and then filtering the mixture. The blending process can take anywhere from a few days to several weeks.

Bottle aging

Some wines are aged in the bottle. This is done by storing the wine in a cellar or a similar environment for a period of time before being sold.
