Red Canary:

The Red Canary Tim Birkhead, 2014-01-30 The creation of Dolly the sheep in the 1990s was for many people the start of a new era the age of genetically modified animals However the idea was not new for in the 1920s an amateur scientist Hans Duncker decided to genetically engineer a red canary Though his experiments failed they paved the way for others to succeed when it was recognised that the canary needed to be both a product of nature and nurture This highly original narrative of huge contemporary relevance reveals how the obsession with turning the wild canary from green to red heralded the exciting but controversial developments in genetic manipulation The Unreliability of the Neutral Red Method, as Generally Employed, for the Differentiation of B. Typhosus and B. Coli. ... Mabel Purefoy Fitzgerald, 1902

Ten Thousand Birds Tim Birkhead, Jo Wimpenny, Bob Montgomerie, 2014-03-01 Ten Thousand Birds provides a thoroughly engaging and authoritative history of modern ornithology tracing how the study of birds has been shaped by a succession of visionary and often controversial personalities and by the unique social and scientific contexts in which these extraordinary individuals worked This beautifully illustrated book opens in the middle of the nineteenth century when ornithology was a museum based discipline focused almost exclusively on the anatomy taxonomy and classification of dead birds It describes how in the early 1900s pioneering individuals such as Erwin Stresemann Ernst Mayr and Julian Huxley recognized the importance of studying live birds in the field and how this shift thrust ornithology into the mainstream of the biological sciences The book tells the stories of eccentrics like Colonel Richard Meinertzhagen a pathological liar who stole specimens from museums and quite likely murdered his wife and describes the breathtaking insights and discoveries of ambitious and influential figures such as David Lack Niko Tinbergen Robert MacArthur and others who through their studies of birds transformed entire fields of biology Ten Thousand Birds brings this history vividly to life through the work and achievements of those who advanced the field Drawing on a wealth of archival material and in depth interviews this fascinating book reveals how research on birds has contributed more to our understanding of animal biology than the study of just about any other group of organisms

SHORTLISTED FOR THE WAINWRIGHT PRIZE FOR WRITING ON GLOBAL CONSERVATION Pilcher is both very funny and very very clever Gillian Burke Richly entertaining throughout Sunday Times For the last three billion years or so life on Earth was shaped by natural forces Evolution tended to happen slowly with species crafted across millennia Then a few hundred thousand years ago along came a bolshie big brained bipedal primate we now call Homo sapiens and with that the Earth's natural history came to an abrupt end We are now living through the post natural phase where humans have become the leading force shaping evolution This thought provoking book considers the many ways that we've altered the DNA of living things and changed the fate of life on earth We have carved chihuahuas from wolves and fancy chickens from jungle fowl We've added spider genes to goats and coral genes to tropical fish It's possible to buy genetically modified pets eat genetically modified fish and watch cloned ponies thunder up and down the polo field Now as our global dominance grows our influence extends far beyond these species As we warm our world and radically reshape the biosphere we affect the evolution of all living things near and far from the emergence of novel hybrids such as the pizzly bear to the entirely new strains of animals and plants that are evolving at breakneck speed to cope with their altered environment In *Life Changing* Helen introduces us to these post natural creations and talks to the scientists who create study and tend to them At a time when the future of so many species is uncertain we meet some of the conservationists seeking to steer evolution onto firmer footings with novel methods like the spermcopter coral IVF and plans to release wild elephants into Denmark Helen explores the changing relationship between humans and the natural world and reveals how with evidence based thinking humans can help life change for the better *Compendium-Canaries* Norbert E.W.
