Gerontechnology Jan A. M. Graafmans, Vappu Taipale, Neil Charness, 1998 This publication is concerned with gerontechnology the study of technology and ageing with the aim of improving the functioning of older people in daily life The first part of the book is a compilation of the key note addresses describing the background for and the conditions under which the emerging field of gerontechnology can be developed further The chapters deal with political socio economic ethical demographic issues related to gerontechnology Furthermore methodological approaches in human factors ergonomics and industrial design are described Trends in technological developments and innovations conclude the first volume The second part presents some 80 case studies divided over 9 sections 1 perception and cognition 2 communication technology 3 mobility and transport 4 health and home care technology 5 housing 6 training and education 7 safety and security 8 product design and 9 culture and attitudes

Data Security for Health Care SEISMED Consortium, 1996 The efficiency of modern health care relies more and more upon a computerised infrastructure Open distributed information systems have started to bring professionals together from all over the world On the one hand easy processing and communication of images sound and texts will help to visualize and therefore treat illnesses and diseases efficiently on the other hand the very ease of access and use can threaten patient privacy accountability and health care professional secrecy Developments in community care are responsible for the fact that many aspects of patient care are delivered outside the closed walls of a hospital and hence patient records must also be accessible and updated throughout the community Therefore the introduction of information technology should focus primarily on the improvement of the health of patients or at least not putting patients health at risk This means that the right data has to be available to the right person at the right time availability Information technology deeply affects the confidential relationship between patient and doctor since it increasingly surrounds and mediates it Information systems in health care establishments are increasingly developing towards an integrated system where various users can interact and communicate The process of integration will cross the borders of local health care establishments and it will progressively expand e g into patients homes into a European health care community in order to support the mobility of patients the exchange of medical and administrative data transfer of bills and money

Interactive Technology and the New Paradigm for Healthcare Richard M. Satava, Karen Morgan, Hans B. Sieburg, 1995 This work contains the state of the art in Virtual Reality as applied to Medicine Interactive technology used in many research and development programs can be applied to health care by involving robotics computer vision simulation artificial intelligence image manipulation and storage data gloves man machine interfaces etc The Health Telematics Application Program for example is advancing virtual reality and enabling technologies simulation visualization and robotics in health care services for patients the elderly and persons with disabilities This book addresses the following items from the end user s perspective technology transfer telerobotics telemedicine education and training and virtual reality the book would be useful for those researching
