Wildlife Ladds 2009 Haematology of Australian Mammals Clark 2004 and Australian Mammals Biology and Captive Management Second Edition Jackson 2025 **Reintroduction of Fish and Wildlife Populations** David S.

Jachowski,Joshua J. Millspaugh,Paul L. Angermeier,Rob Slotow,2016-09-13 Reintroduction of Fish and Wildlife Populations provides a practical step by step guide to successfully planning implementing and evaluating the reestablishment of animal populations in former habitats or their introduction in new environments In each chapter experts in reintroduction biology outline a comprehensive synthesis of core concepts issues techniques and perspectives This manual and reference supports scientists and managers from fisheries and wildlife professions as they plan reintroductions initiate releases of individuals and manage restored populations over time Covering a broad range of taxonomic groups ecosystems and global regions this edited volume is an essential guide for academics students and professionals in natural resource management

Reintroduction Biology of Australian and New Zealand Fauna Melody Serena,1995 Based on papers presented at the three day conference Reintroducing Biology of Australasian Fauna held at Healesville Sanctuary in April 1993 *The Handbook of New Zealand Mammals* Carolyn King,David Forsyth,2021-01-20 The Handbook of New Zealand Mammals is the only definitive reference on all the land breeding mammals recorded in the New Zealand region including the New Zealand sector of Antarctica It lists 65 species including native and exotic wild and feral living and extinct residents vagrants and failed introductions It describes their history biology and ecology and brings together comprehensive and detailed information gathered from widely scattered or previously unpublished sources The description of each species is arranged under standardised headings for easy reference Because the only native land breeding mammals in New Zealand are bats and seals the great majority of the modern mammal fauna comprises introduced species whose arrival has had profound effects both for themselves and for the native fauna and flora The book details changes in numbers and distribution for the native species and for the arrivals it summarises changes in habitat diet numbers and size in comparison with their ancestral stocks and some of the problems they present to resource managers For this third edition the text and references have been completely updated and reorganised into Family chapters The colour section includes 14 pages of artwork showing all the species described and their main variations plus two pages of maps **Carnivores of Australia** Alistair Glen,Christopher

Dickman,2014-11-05 The Australian continent provides a unique perspective on the evolution and ecology of carnivorous animals In earlier ages Australia provided the arena for a spectacular radiation of marsupial and reptilian predators The causes of their extinctions are still the subject of debate Since European settlement Australia has seen the extinction of one large marsupial predator the thylacine another the Tasmanian devil is in danger of imminent extinction and still others have suffered dramatic declines By contrast two recently introduced predators the fox and cat have been spectacularly successful with devastating impacts on the Australian fauna Carnivores of Australia Past Present and Future explores Australia s unique predator communities from pre historic historic and current perspectives It covers mammalian reptilian and avian carnivores

both native and introduced to Australia It also examines the debate surrounding how best to manage predators to protect livestock and native biodiversity Readers will benefit from the most up to date synthesis by leading researchers and managers in the field of carnivore biology By emphasising Australian carnivores as exemplars of flesh eaters in other parts of the world this book will be an important reference for researchers wildlife managers and students worldwide *Biological Invasions in New Zealand* Robert B. Allen, William G. Lee, 2006-07-04 Man s recent colonization of New Zealand has dramatically altered the resident biota and resulted in the introduction of numerous alien organisms to these once remote islands In reverse there is increasing evidence of a lesser known export of species to other regions of the world This volume presents an in depth review of the level and rate of such invasions and investigates what controls the success of invaders and the consequences for ecosystems both on land and offshore It provides invasion biologists everywhere with tests of current theories about those factors leading to the success of invaders as well as evaluating principles for understanding the nature of their impacts that form a solid basis for the effective management of biological invasions worldwide **Cats in Australia** Chris Dickman, John Woinarski, Sarah Legge, 2019-06-01 Across the world cats are loved as pets or are kept or tolerated for their role in controlling some animal pests But cats both pets and feral also kill many native animals and this toll can be enormous Cats have been remarkably successful in Australia spreading pervasively across the continent and many islands occurring in all environments and proving to be adept and adaptable hunters A large proportion of Australia s distinctive fauna is threatened and recent research highlights the significant role that cats play in the decline and extinction of native species Cats in Australia brings this research together documenting the extent to which cats have subverted and are continuing to subvert Australia s biodiversity But the book does much more than spotlight the impacts of cats on Australian nature It describes the origins of cats and their global spread their long standing and varying relationship with people their global impacts and their ecology It also seeks to describe the challenge of managing cats and the options available to constrain their impacts *Land Degradation* A.J. Conacher, 2013-12-11 This book contains selected contributions from the Sixth Meeting of the International Geographical Union s Commission on Land Degradation and Desertification held in Perth Australia in September 1999 Collectively these contributions explicitly seek to understand not only the mechanisms responsible for the problem of land degradation but their social and economic implications the means of overcoming the problems and the policy instruments whereby remedial measures may be implemented This breadth of approach is both distinctive and essential if the problems are to be tackled effectively The authorship comprises of specialists mostly geographers from universities research organizations and government agencies who provide a truly international perspective with contributions from Iceland to Australia and from the USA to Japan Audience The book presents current research findings which will be of particular benefit to professionals and practitioners as well as researchers and tertiary level educationalists who are involved with land degradation
