Relativistic Channeling:

Relativistic Channeling R. A. Carrigan, James A. Ellison, 1987-09 Channeling by its nature involves a wide and disparate range of disciplines Crystal preparation material science accelerator physics sophisticated theoretical analysis and of course channeling itself all must work in concert in a research program In spite of the gulfs separating some of these activities researchers have drawn together over the last decade to carry out remarkable experiments in relativistic channeling and channeling radiation Several informal workshops on high energy channeling have been held over the years at Aarhus and Fermilab However with the vigorous progress in the field in the last several years it became clear that a more formal comprehensive workshop was needed along with a book that covered the whole spectrum of the new developments probed the future and also laid out some of the foundations of the subject This volume is the outcome of that process The organization and preparation of both the volume and the workshop owe much to several outstanding scientific committees The membership of these included J Andersen Aarhus S Baker Fermilab B Berman G Washington G Bologna Torino E Bonderup Aarhus S Datz Oak Ridge J Forster Chalk River F Fujimoto Tokyo W Gibson Albany I Mitchell Chalk River Y Ohtsuki Waseda R Pantell Stanford S Picraux Sandia J Remillieux Lyon A Saenz NRL V Schegelsky Gatchina C Sun Albany H Tiberall Catholic U E Uggerhøj CERN and R Wedell Humboldt Others from across the spectrum of scientific disciplines agreed to serve as session chairmen *Laser Physics at Relativistic Intensities* A.V. Borovsky, A.L. Galkin, O.B. Shiryayev, T. Auguste, 2013-04-17 One of the major accomplishments of laser technology that took place during the last 15 years is the possibility of generating coherent radiation that can be focused so that its intensity reaches the magnitude of 10^{18} W/cm² Even higher intensities result from nonlinear self focusing of such radiation in matter The unique character of these magnitudes is illustrated by the fact that these intensities are substantially higher than those occurring inside the Sun A range of previously unexplored physical mechanisms come into play as laser pulses interact with matter under the conditions of an extreme concentration of laser energy In particular free electrons of plasma formed by rapid nonlinear ionization of gases and solid targets during the pulse rise time are driven by a laser radiation electric field at velocities comparable to the speed of light and the corresponding relativistic increase in their masses entails a modification of the plasma's optical properties Laser radiation intensities at which the above effect occurs are called relativistic This book is intended to provide an introduction to the field of laser physics at relativistic intensities Extensive theoretical and experimental studies have been performed in this area in the last decade At present laser physics at relativistic intensities can be considered a new and rapidly evolving area of modern physics Important basic new phenomena and concepts of applications are associated with it among them relativistic and charge displacement self channeling wake field particle acceleration generation of free electron harmonics and X rays and fast ignition **Crystal Channeling and Its Application at High-Energy Accelerators** Valery M. Biryukov, Yuri A. Chesnokov, Vladilen I. Kotov, 2013-03-09 Nature performs nothing vainly and makes nothing unnecessary

Aristotle Interest in the passage of charged particles through crystals first appeared at the beginning of this century following experiments on x ray diffraction in crystallattices which provided the proof of an ordered distribution of atoms in a crystal Stark 1 put forward the hypothesis that certain directions in a crystal should be relatively transparent to charged particles These first ideas on the channeling of charged particles in crystals were forgotten but became topical again in the early 1960s when the channeling effect was rediscovered by computer simulation 2 and in experiments 3 that revealed anomalously long ion ranges in crystals The orientational ef fects during the passage of charged particles through crystals have been found for a whole range of processes characterized by small impact parameters for collisions between particles and atoms nuclear reactions large angle scatter ing energy losses Lindhard explained the channeling of charged particles in crystals 4 The results of the numerous investigations into the channeling of low energy amounting to several MeV charged particles in crystals have been summarized in several monographs and reviews 5 8l

Relativistic Nonlinear Electrodynamics Hamlet Karo Avetissian, 2015-11-20 This revised edition of the author s classic 2006 text offers a comprehensively updated review of the field of relativistic nonlinear electrodynamics It explores the interaction of strong and super strong electromagnetic laser radiation with the electromagnetic quantum vacuum and diverse types of matter including free charged particles and antiparticles acceleration beams plasma and plasmous media The appearance of laser sources of relativistic and ultra relativistic intensities over the last decade has stimulated investigation of a large class of processes under such super strong radiation fields Revisions for this second edition reflect these developments and the book includes new chapters on Bremsstrahlung and nonlinear absorption of superintense radiation in plasmas the nonlinear interaction of relativistic atoms with intense laser radiation nonlinear interaction of strong laser radiation with Graphene and relativistic nonlinear phenomena in solid plasma targets under supershort laser pulses of ultrarelativistic intensities The only book devoted to the subject of relativistic nonlinear electrodynamics this second edition will be a valuable resource for graduate students and researchers involved in any aspect of the field including those working with intense x ray gamma ray lasers the new generation of small size laser plasma accelerators of superhigh energies and high brightness particle beams

Channeling and Other Penetration Phenomena E. Uggerhoj, A. Zucker, 1989 *Planar Waveguides and other Confined Geometries* Gerd Marowsky, 2014-10-07 This book provides a comprehensive overview of the theoretical concepts and experimental applications of planar waveguides and other confined geometries such as optical fibres Covering a broad array of advanced topics it begins with a sophisticated discussion of planar waveguide theory and covers subjects including efficient production of planar waveguides materials selection nonlinear effects and applications including species analytics down to single molecule identification and thermo optical switching using planar waveguides Written by specialists in the techniques and applications covered this book will be a useful resource for advanced graduate students and researchers studying planar waveguides and optical fibers
