and Control K Westlake,2014-01-29 This book addresses a pollution hazard prevalent in most cities and large towns world wide by providing an understanding of the scientific and technical control of the landfill method of domestic and non domestic waste disposal considered within the framework of integrated waste management Landfill disposal is practised world wide and is cheap and convenient but if poorly managed poses a serious threat to the environment This pollution threat is a source of concern to regulating authorities and environmental pressure groups This comprehensive text reflects the authority of the author s considerable experience in assessment and remediation of landfill sites which he has taught in post graduate courses on hazardous waste management and in running international programmes on waste and contaminated land related subjects for industry Dr Westlake s expertise also reflects his work in association with the Environmental Safety Centre at the Harwell Laboratory Featuring the microbial degradation of waste within landfills with an understanding of hazards associated with the production migration and control of landfill gas and leachate the book also points to the benefits to be obtained from gas production There is important discussion on the monitoring of potentially dangerous dormant sites and much helpful advice on trouble shooting The text is set in the context of regulatory controls and assesses their impact while at the same time looking at the way forward for waste disposal by landfill There is coverage of legislative requirements and constraints including those from the European Union reflecting official attitudes There is growing international consensus that EU regulations can be interpreted and applied as a benchmark in relation to legal practices and attitudes in all countries throughout the world Addresses a pollution hazard prevalent in most cities and large towns world wide Provides an understanding of the scientific and technical control of the landfill method of domestic and non domestic waste disposal considered within the framework of integrated waste management Provides an important discussion on the monitoring of potentially dangerous dormant sites

Environmental Geotechnics R. W. Sarsby,2000 Increasing environmental awareness has emphasized the many engineering situations in which there are potential environmental impacts This text provides a guide for engineers who are likely to be involved in such situations **Regulation, Enforcement and**

Governance in Environmental Law Richard Macrory Hon KC,2014-10-09 Regulation Enforcement and Governance in Environmental Law is an updated edition of Richard Macrory s most influential writings Spanning his entire career these are all works which have helped shape contemporary environmental law and policy The book includes the full text of his 2006

Cabinet Office Review on Regulatory Sanctions new chapters on the Climate Change Act 2008 the Environment Tribunal and analysis of recent leading cases The book is divided into five thematic sections Regulatory reform Institutional Reform and Change the Dynamics of Environmental Law the Courts and the Environment and Europe and the Environment Reviews of the first edition This book is surely destined to become a must read for anyone academic practitioner or student interested in the development of regulation enforcement and environmental governance P Bishop IUCN Academy of Environmental Law Journal An excellent reference work on environmental law an extremely important and valuable edition to the environmental lawyer s bookshelf C Abbot Journal of Environmental Law It is a rare to find a volume which consumes one s attention for 765 pages and rarer still that such a blockbuster be a law book This book is not solely for environmental enthusiasts it should be essential reading for anyone concerned with the institutional reform transparency and accountability in the UK and EU C MacKenzie Cambridge Law Journal Seventeenth Report Great Britain. Royal Commission on Environmental Pollution, John Houghton, 1993-01-01 34 million tonnes of municipal waste 30 40 million tonnes of sewage sludge and possibly 6 million tonnes of chemical and clinical wastes are produced in the UK each year This comprehensive report deals with incineration and its role in relation to this waste From their study the Commission has come up with 35 recommendations which include a national strategy for waste management that a levy be applied to all waste deposited in landfill sites that government should give targets to waste disposal authorities for the recovery of energy from municipal waste and that waste disposal facilities should wherever possible be on sites which allow wastes to be moved by rail or water transport rather than road Waste Treatment and Disposal Paul T. Williams, 2013-04-30 Following on from the successful first edition of Waste Treatment Disposal this second edition has been completely updated and provides comprehensive coverage of waste process engineering and disposal methodologies Concentrating on the range of technologies available for household and commercial waste it also presents readers with relevant legislative background material as boxed features NEW to this edition Increased coverage of re use and recycling Updating of the usage of different waste treatment technologies Increased coverage of new and emerging technologies for waste treatment and disposal A broader global perspective with a focus on comparative international material on waste treatment uptake and waste management policies **Waste Incineration and the Environment** R M Harrison, R E Hester, 2007-10-31 Waste incineration is finding increasing favour as a waste disposal method and this Issue considers the topic of waste disposal and the place of incineration as an option It reviews the emissions and environmental impacts of incineration and available control technologies specific research upon emissions of trace metals and organic micropollutants and the methodologies for environmental impact assessment There is currently great interest and considerable controversy over waste incineration and this book gives a dispassionate view of the scientific and technical issues involved It provides a broad overview of the role incineration can play in waste management and looks at how environmental impacts may be managed and assessed For municipal waste when coupled with energy recovery waste

incineration provides an efficient spatially compact means of bulk waste reduction which is widely favoured over landfill and for some chemical wastes provides the only presently viable disposal option This book places incineration in the context of other waste disposal options and examines the relative benefits and environmental impacts in a balanced way **Crop Spraying and the Health of Residents and Bystanders** Great Britain. Royal Commission on Environmental Pollution, 2007 This report addresses a complex and controversial issue the human health risks associated with the use of agricultural pesticides Some people are extremely concerned about their potential exposure to pesticides arising because they occupy properties adjacent to farmland or because they have or have had access to such land for example when using footpaths The official position in the UK in response to these concerns has been that a robust approach to the assessment of human health risks associated with pesticide exposure already exists and that there is no scientific case for taking additional measures such as the introduction of no spray buffer zones to protect members of the public who may be in the vicinity of a sprayed area But those who consider themselves to be adversely affected by pesticide spraying have not been reassured and have continued to campaign for the adoption of more precautionary measures **Developments in Environmental Regulation** Jon Foreman, 2017-11-12 This book provides a critical examination of contemporary approaches to environmental regulation in the UK and the European Union It also explores how regulation has evolved in response to a number of factors including industrial development and improved scientific knowledge while considering the radical next steps that need to be taken in response to existing challenges **Developments in Environmental Regulation** draws its focus on the effects of risk based approaches to the environmental regulation of business and industry including its impact on sustainable economic growth The book also considers the challenges and potential opportunities that surround the UK's withdrawal or Brexit from the European Union This edited collection has been written by a group of highly experienced regulatory specialists whose insightful perspectives on key areas of environmental regulation are situated at the core of this work This book will appeal to students and academics policy makers and environmental practitioners interested in understanding how environmental policy and regulation is applied and how it can be adapted to its political context **Wolf and Stanley on Environmental Law** Susan Wolf, Neil Stanley, 2013-10-23 Written with real clarity by authors teaching and researching in the field **Wolf and Stanley on Environmental Law** offers an excellent starting point for both law and non law students encountering this diverse and rapidly developing subject for the first time The focus of the book is on the regulation and control of pollution and includes chapters on environmental permitting waste management air and water pollution and contaminated land The book also includes the administration and enforcement of environmental law EU environmental law the environmental torts and the private regulation of environmental law The book is supported by a range of learning features designed to help students Consolidate your learning Chapter learning objectives and detailed summaries clarify and highlight key points Understand how the law works in practice Law in Action features demonstrate the application of pollution control law Plan your research

Detailed end of chapter further reading sections outline articles books and online resources that provide next steps for your research This sixth edition has been updated and revised to take into account recent developments in the subject including coverage of the Environmental Permitting England and Wales Regulations 2010 developments in the Environment Agency enforcement and sanctions policy documents updates relating to the defence of statutory authority in the tort of private nuisance and current issue relating to compliance with the Aarhus Convention Suitable for students of environmental law and the wider environmental studies Wolf and Stanley on Environmental Law is a valuable guide to this wide ranging subject

Adapting Institutions to Climate Change Great Britain. Royal Commission on Environmental Pollution, 2010 The overwhelming scientific consensus is that the earth is warming because of human activities Adaptation will be necessary even if mitigation efforts are markedly increased because we are already locked in to climate change as a result of historic greenhouse gas emissions Projections show that it is likely that global average temperatures will rise by 2 degrees C and there is the potential for a 4 degree C rise by the end of the century UK projections suggest warmer drier summers and warmer wetter winters The consequences are likely to be profound even devastating with more extreme events floods drought and heat waves coupled with sea level rises Policies and practice on water management coast protection and nature conservation will need to change This report explores how institutions should adapt their policies to a changing climate and offers a ten point check list to be followed by all organisations The Commission found many institutions are poorly prepared to adapt to climate change and many have simply not started to consider it The Commission makes recommendations designed to help institutions develop their capacity to respond to this challenge In contrast to climate change mitigation where local actions have global benefits adaptation is primarily about local action with local consequences that may differ markedly in different parts of the UK

Managing and Minimizing Construction Waste J. Ferguson, Institution of Civil Engineers (Great Britain), 1995 Over two billion tonnes of waste are generated in the European Union every year approximately half of which comes from the construction industry Increasing pressure on landfill sites accompanied by escalating prices and a growing awareness of environmental concerns has made the minimization of this waste and its responsible disposal an absolute necessity The Environment Protection Act 1990 placed a Duty of Care on every individual involved in the creation storage transportation or disposal of waste This practical guide for everyone involved with the construction industry outlines how to manage waste from construction economically and in accordance with the legal requirements of the Duty of Care It explains in detail all actions required of the responsible person and offers extremely practical advice on how to minimize the amount of waste produced thus saving costs and reducing the environmental impact

Histories 12 The All Powerful NIMBY 13 A New Approach 14 Garbology A Vision for the Future *Town and Country Planning in the UK* J. B. Cullingworth, Vincent Nadin, 2002 This thirteenth edition has been completely revised to take into account all the changes that have occurred in British planning including the policies introduced by the Labour government devolution innovations and the European Union *Sustainable Solid Waste Management* Ni-Bin Chang, Ana Pires, 2015-02-18 This book presents the application of system analysis techniques with case studies to help readers learn how the techniques can be applied how the problems are solved and which sustainable management strategies can be reached **Integrated Solid Waste Management: A Lifecycle Inventory** P.R. White, M. Franke, P. Hindle, 2012-12-06 Life is often considered to be a journey The lifecycle of waste can similarly be considered to be a journey from the cradle when an item becomes valueless and usually is placed in the dustbin to the grave when value is restored by creating usable material or energy or the waste is transformed into emissions to water or air or into inert material placed in a landfill This preface provides a route map for the journey the reader of this book will undertake Who Who are the intended readers of this book Waste managers whether in public service or private companies will find a holistic approach for improving the environmental quality and the economic cost of managing waste The book contains general principles based on cutting edge experience being developed across Europe Detailed data and a computer model will enable operations managers to develop data based improvements to their systems Producers of waste will be better able to understand how their actions can influence the operation of environmentally improved waste management systems Designers of products and packages will be better able to understand how their design criteria can improve the compatibility of their product or package with developing environmentally improved waste management systems Waste data specialists whether in laboratories consultancies or environmental managers of waste facilities will see how the scope quantity and quality of their data can be improved to help their colleagues design more effective waste management systems *Sourcebook on Environmental Law* Maurice Sunkin, 2001-11-30 The second edition of this sourcebook brings together a comprehensive selection of the principal international European and domestic sources of environmental law together with commentary and extensive references to secondary sources including relevant websites The new edition has been fully revised and extended to include the major developments in this rapidly evolving area of law In particular at the international level there is now consideration of the Kyoto Protocol 1997 the Aarhus Convention 1998 the Basel Protocol 1999 and the Biosafety Protocol 2000 At the European level there is coverage of the changes introduced by the Amsterdam Treaty the 2000 Water Framework Directive the new Air Quality Directives and the EC White Paper on Environmental Liability There is also discussion of the proposed Sixth Environmental Action Programme The domestic coverage includes consideration of the Pollution Prevention and Control Act 1999 the Countryside and Rights of Way Act 2000 the implementation of the contaminated land regime together with coverage of the new UK waste strategy The book now also includes extensive consideration of the impact of the Human

Rights Act 1998 on environmental law Recent case law is included throughout This unique work will provide an extremely valuable resource for all those studying teaching and working in the field of environmental law
