Restoration and Management of Lakes and Reservoirs G. Dennis Cooke, Eugene B. Welch, Spencer Peterson, Stanley A. Nichols, 2016-04-19 It has been more than ten years since the last edition of the bestselling *Restoration and Management of Lakes and Reservoirs*. Reservoir Fish Habitat Management L.E. Miranda, 2017-03-01 This document is organized into an introduction and 13 sections. Section 1 is based on a nationwide survey of reservoir habitats completed by the Reservoir Fisheries Habitat Partnership (RFHP). The RFHP canvassed agency professionals about various aspects of reservoir fish habitat degradation and identified 12 comprehensive factors that captured most degradation. The sections developed in this document parallel these 12 factors to identify management practices that address the perceived degradation. Most sections are organized similarly: background information about the degradation factor is followed by a listing of alternative management practices. Deciding on appropriate management action can be complex because there are often several options for addressing degradation problems. Different options may have different cost effectiveness and consequences. A simplified decision model to choose among management options is suggested in section 12. Habitat management often goes far beyond the manpower available to agencies involved in reservoir habitat management, so suggestions on working with stakeholders are included in section 13. Ballpark costs of reservoir fish habitat management practices are given in the Appendix.

Lake Functioning Gertrud K. Nürnberg, 2024-10-10 This book explores the interconnections of internal phosphorus loading, cyanobacteria, and climate change and their role in determining water quality in freshwater. It explains the sometimes elusive process of internal phosphorus loading with its chemical and biological roots. A primer in cyanobacteria (blue greens) provides the background to investigate connections and causal relationships. Reviewing recent observations on present and future climate change, the book explores its effects on lake functioning. Quantitative and theoretical evidence support the hypothesis that a major contributing factor to the recent increase in cyanobacteria bloom expansion and frequency is the initiation and persistence of internal phosphorus loading as intensified by climate change. The abatement and prevention of cyanobacteria proliferation thus include techniques that deal with internal P loading as offered in the final chapter. Some key topics covered are: In depth exploration of internal phosphorus loading and its quantification in
