Nature and Culture in the Northern Forest Pavel Cenkl, 2010-03-15 Nearly 30 million acres of the Northern Forest stretch across New York Vermont New Hampshire and Maine Within this broad area live roughly a million residents whose lives are intimately associated with the forest ecosystem and whose individual stories are closely linked to the region's cultural and environmental history The fourteen engaging essays in *Nature and Culture in the Northern Forest* effectively explore the relationships among place work and community in this complex landscape Together they serve as a stimulating introduction to the interdisciplinary study of this unique region Each of the four sections views through a different lens the interconnections between place and people The essayists in *Encounters* have their hiking boots on as they focus on personal encounters with flora and fauna of the region The energizing accounts in *Teaching and Learning* question our assumptions about education and scholarship by proposing invigorating collaborations between teachers and students in ways determined by the land itself not by the abstractions of pedagogy With the freshness of Thoreau's irreverence the authors in *Rethinking Place* look at key figures in the forest's literary and cultural development to help us think about the

affiliations between place and citizenship In *Nature as Commodity* three essayists consider the ways that writers from the nineteenth and early twentieth centuries thought about nature as a product and thus how their conclusions bear on the contemporary retailing of place The writers in *Nature and Culture in the Northern Forest* reveal the rich affinities between a specific place and the literature thought and other cultural expressions it has nurtured Their insightful and stimulating connections exemplify adventurous bioregional thinking that encompasses both natural and cultural realities while staying rooted in the particular landscape of some of the Northeast's wildest forests and oldest settlements *Tourism Crises* Eric Laws, Bruce Richard Prideaux, 2017-02-10 Don't wait until it's too late to learn how to manage a crisis situation The impact of crises on tourism has increased in the last ten years in response to terrorism war health emergencies and natural disasters *Tourism Crises* presents the latest research on crisis management with in depth analysis of tourism flows and the Lairds, Land and Sustainability Jayne Glass, 2013-07-22 Scotland is at the heart of modern sustainable upland management Large estates cover vast areas of the uplands with a long complex and emotive history of ownership and use In recent decades the Scottish uplands have increasingly been the arena for passionate debates over large scale land management issues Crucially what kinds of ownership and management will best deliver sustainable futures for upland environments and communities Although the globally unique dominance of private ownership remains a distinctive characteristic of Scotland's uplands increasing numbers of estates are now owned by environmental NGOs and local communities especially since the Land Reform Scotland Act of 2003 A decade after the passage of this landmark Act this book synthesises research carried out on a diverse range of upland estates by the Centre for Mountain Studies at Perth College University of the Highlands and Islands The findings from privately owned estates as well as those owned by communities charities and conservation groups will prove enlightening and relevant to upland managers policy makers and researchers across Britain and Europe With the Scottish Government promoting a vision of environmental sustainability and with the new diversity of ownerships and management now appearing this timely and topical book investigates the implications of these different types of land ownership for sustainable upland management Economy and Ecology of Heathlands W. Herbert Diemont, Wim J.M. Heijman, Henk Siepel, Nigel R. Webb, 2014-12-22 Heathlands in Europe reflect a long history of human activity and use Through the ages heathlands have been of importance as semi agricultural areas hunting territories and various other uses of mankind This diversity of use has created a cultural diversity over the whole Atlantic area of Europe from Portugal and Spain in the south to Norway in the north and from Germany in the east to Ireland in the west *Economy and Ecology of Heathlands* shows us both the diversity in use all over Europe and combines this information with the newest insights in ecology and the Natura 2000 status most of these heathlands have got nowadays Central theme is how to cover the costs of maintenance of these heathlands Is their future in new types of commons or do other types of land ownership using the revenues of heathland ecosystem services give better opportunities The editors combine a broad variance in knowledge of heathlands

varying from all aspects of ecology land use as well as economy

The Dynamics of Heritage Laurence

Gouriévidis, 2016-03-23 There has been much academic interest in the role of museums as places where understanding of the past is shaped and legitimised for a wide and increasingly diverse public This book focuses on the museum representations of the Highland Clearances a much neglected aspect of one of the most disputed and politically charged issues in modern Scottish history Drawing together a range of inter disciplinary themes and notions it considers the cultural legacy of the period brings to light the socially and historically conditioned meanings and values encapsulated in museum narratives of the Clearances and shows the significance of collective memory in the negotiations inherent in heritage work Examining both national and local museums in Scotland and concluding with comparisons with Australian museums of migration Dynamics of Heritage contributes to our understanding of the processes of heritage construction and its relationship to issues of memory and other modes of engagement with the past

Invasive and Introduced Plants and Animals Ian D. Rotherham, Robert

A. Lambert, 2012-12-06 There have been many well publicized cases of invasive species of plants and animals often introduced unintentionally but sometimes on purpose causing widespread ecological havoc Examples of such alien invasions include pernicious weeds such as Japanese knotweed an introduced garden ornamental which can grow through concrete the water hyacinth which has choked tropical waterways and many introduced animals which have out competed and displaced local fauna This book addresses the broader context of invasive and exotic species in terms of the perceived threats and environmental concerns which surround alien species and ecological invasions As a result of unprecedented scales of environmental change combined with rapid globalisation the mixing of cultures and diversity and fears over biosecurity and bioterrorism the known impacts of particular invasions have been catastrophic However as several chapters show reactions to some exotic species and the justifications for interventions in certain situations including biological control by introduced natural enemies rest uncomfortably with social reactions to ethnic cleansing and persecution perpetrated across the globe The role of democracy in deciding and determining environmental policy is another emerging issue In an increasingly multicultural society this raises huge questions of ethics and choice At the same time in order to redress major ecological losses the science of reintroduction of native species has also come to the fore and is widely accepted by many in nature conservation However with questions of where and when and with what species or even species analogues reintroductions are acceptable the topic is hotly debated Again it is shown that many decisions are based on values and perceptions rather than objective science Including a wide range of case studies from around the world his book raises critical issues to stimulate a much wider debate
