**Managing Strategic Airline Alliances** Birgit Kleymann, Hannu Seristö, 2017-03-02 Strategic airline alliances are an important topic in airline management today stimulated by poor access of international airlines to large domestic markets such as the USA and EU and the increasing importance of network scope Outright mergers of international airlines have proved to be difficult for political cultural and legal reasons making alliances the best available form to strengthen strategic positions and streamline networks However there are a number of difficulties associated with an alliance such as long term stability political climate cultural conflict and how much capital alliance partners should sink into the integration The main purpose of the book is to convey in an accessible form to a wide audience the results of recent academic research on strategic airline alliances The authors systematically cover policy regulation and consumer issues management marketing and strategic issues the mechanics of airline alliances the airline alliance group as an organisation in its own right different forms of alliances and clusters success and failure factors of airline alliances The book successfully provides an analytical framework for understanding the dynamics of airline alliance groups examines both the level of the individual airline and the alliance group itself applies recent insights from organisation theory The readership includes airline managers policy makers academic researchers and others interested in evolving multilateral alliances It can also be used as a course book both in aviation management training and in more general modules on alliances for advanced students in air transport management

Competition and Regulation in the Airline Industry Steven Truxal, 2013-01-04 An examination of the relationship between competition and the deregulation and liberalisation of the US and European air transport sectors reveals that the structure of the air transport sector has undergone a number of significant changes A growing number of airlines are entering into horizontal and vertical cooperative arrangements and integration including franchising codeshare agreements alliances virtual mergers and in some cases mergers with other airlines groups of airlines or other complementary lines of business such as airports This book considers the current legal issues affecting the air transport sector incorporating recent developments in the industry including the end of certain exemptions from EU competition rules the effect of the EU US Open Skies Agreement the accession of new EU Member States and the Lisbon Treaty The book explores the differing European and US regulatory approaches to the changes in the industry and examines how airlines have remained economically efficient in what is perceived as a complex and confused regulatory environment *Competition and Regulation in the Airline Industry* will be of particular interest to academics and students of competition law as well as EU law **WOW** *and SkyTeam Cargo: An In-depth Analysis of Strategic Alliances for Air Cargo Carriers and The Impact on Cargo Airlines' Operations and Success* Florian Smeritschnig, 2013-08 In the airline industry the formation of highly integrated strategic alliances started during the 1990 s Thereby Star Alliance became the first global player when passenger airlines faced deregulation and wanted to support their growth and expansion in international markets For cargo companies this type of

integration came around later namely in the beginning of 2000 As a result of the increased co operation major alliances were formed with the launch of SkyTeam Cargo and WOW In the dawn of the new century these alliances should lay the cornerstone for the achievement of a long term success through synergy effects and higher competitiveness in terms of the individual and the group A decade later WOW and SkyTeam Cargo have evolved in different directions but not all members or ex members are pleased about the results Strategic alliances in air transport have been studied widely but most of the recent publications only cover the passenger side in this business There are a lot of information and statements about the benefits that alliances can bring to its members But the review of the literature shows that research is very sparse when it comes down to the evaluation of the actual impact of alliance integration on air cargo carriers standing The objective of this book is to analyze and interpret the impact of a strategic alliance on cargo airlines revenue tonne kilometres key figures provided by Airline Business 1998 2010 and market share developments The author's aim is on the one hand to answer the question if air cargo operators did profit from alliance integration and on the other hand to give the reasons for this development Besides the book gives an overview about the market's environment the characteristics of air freight and the history of WOW and SkyTeam Cargo Further the additional questions are discussed in detail How did carriers react to the challenges and opportunities in the market What are the main benefits or disadvantages for alliance members What major challenges do prospective members face in an alliance What are the core arrangements and prerequisites for alliance integration Is there a common success are there stability factors and why do alliances fail What alternatives are there to alliance formation

**Regional Airports** M. N. Postorino, 2011 Regional Airports have become increasingly important elements of the air network system both as feeders of hub and spoke services and as origins or destination of point to point services Congestion at the main hubs and increasing demand for air transportation both for passengers and freight services necessitates revaluation of the overall air systems with regional airports taking an ever expanding role Optimisation of air transportation systems within the framework of other forms of transport plays an important part in the present quest for sustainability Congestion nowadays is not only associated with countries such as the USA and those in the EU but also a variety of other countries with fast developing economies where there is a strong increase in air transportation demand The revolution of the existing airport system including regional airports requires the developing of new optimisation tools which can simulate the whole process and produce optimal solutions These models are also essential to predict future demands and in particular the role that regional airports will play The siting of new airports involves taking into consideration a variety of

environmental ecological social and economic factors which transcend the problem of transportation resources optimisation itself Regional Airports can be a powerful driving force behind the development of an area and conversely can result in major problems if they are wrongly sited

*Straight and Level* Stephen Holloway, 2017-11-01 This title was first published in 2003 Airline operating profits are well known to be volatile and the global industry aggregate figures conceal wide differences in performance between carriers The fundamental reasons for the poor performance of the industry as a whole were in the early 1990's that output ran too far ahead of demand and the yield earned on output sold was insufficient to cover costs In strategic context this second edition uses a simple yet powerful model to explore linkages between the fundamentals of airline economics and the volatility of industry results at the operating level Its five parts look in turn at strategic context supply side demand side network
