Manifold Origin:

Manifold: Origin Stephen Baxter, 2002-03-19 One of the best SF writers in the business Manifold Origin is filled with marvelous scientific speculations strange events novel concepts and an awe inspiring sense of the wonders of the universe Science Fiction Chronicle In the year 2015 astronaut Reid Malenfant is flying over the African continent intent on examining a mysterious glowing construct in Earth's orbit But when the very fabric of the sky tears open spilling living creatures to the ground and pulling others inside including his wife Emma Malenfant's quest to uncover the unknown becomes personal While desperately searching to discover what happened to the woman he loves Malenfant embarks upon an adventure to the very fount of human development on earth and beyond Process Grammar: The Basis of Morphology Michael

Leyton, 2012-02-02 Leyton's Process Grammar has been applied by scientists and engineers in many disciplines including medical diagnosis geology computer aided design meteorology biological anatomy neuroscience chemical engineering etc This book demonstrates the following The Process Grammar invents several entirely new concepts in biological morphology and manufacturing design and shows that these concepts are fundamentally important The Process Grammar has process inference rules that give to morphological transitions powerful new causal explanations Remarkably the book gives a profound unification of biological morphology and vehicle design The book invents over 30 new CAD operations that realize fundamentally important functions of a product A crucial fact is that the Process Grammar is an example of the laws in Leyton's Generative Theory of Shape which give the ability to recover the design intents for which the shape features of a CAD model were created The book demonstrates that the Process Grammar recovers important design intents in biological morphology and manufacturing design In large scale manufacturing systems the recovery of design intents is important for solving the interoperability problem and product lifecycle management This book is one of a series of books in Springer that elaborates Leyton's Generative Theory of Shape *An Introduction to Ordinary Differential Equations* James C.

Robinson, 2004-01-08 This refreshing introductory textbook covers both standard techniques for solving ordinary differential equations as well as introducing students to qualitative methods such as phase plane analysis The presentation is concise informal yet rigorous it can be used either for 1 term or 1 semester courses Topics such as Euler's method difference equations the dynamics of the logistic map and the Lorenz equations demonstrate the vitality of the subject and provide pointers to further study The author also encourages a graphical approach to the equations and their solutions and to that end the book is profusely illustrated The files to produce the figures using MATLAB are all provided in an accompanying website Numerous worked examples provide motivation for and illustration of key ideas and show how to make the transition from theory to practice Exercises are also provided to test and extend understanding solutions for these are available for teachers *Introduction to the Qualitative Theory of Differential Systems* Jaume Llibre, Antonio E. Teruel, 2013-10-30 The book deals with continuous piecewise linear differential systems in the plane with three pieces separated by a pair of parallel

straight lines Moreover these differential systems are symmetric with respect to the origin of coordinates This class of systems driven by concrete applications is of interest in engineering in particular in control theory and the design of electric circuits By studying these particular differential systems we will introduce the basic tools of the qualitative theory of ordinary differential equations which allow us to describe the global dynamics of these systems including the infinity The behavior of their solutions their parametric stability or instability and their bifurcations are described The book is very appropriate for a first course in the qualitative theory of differential equations or dynamical systems mainly for engineers mathematicians and physicists

Medical Image Computing and Computer-Assisted Intervention - MICCAI 2011 Gabor Fichtinger, Anne Martel, Terry Peters, 2011-09-22 The three volume set LNCS 6891 6892 and 6893 constitutes the refereed proceedings of the 14th International Conference on Medical Image Computing and Computer Assisted Intervention MICCAI 2011 held in Toronto Canada in September 2011 Based on rigorous peer reviews the program committee carefully selected 251 revised papers from 819 submissions for presentation in three volumes The third volume includes 82 papers organized in topical sections on computer aided diagnosis and machine learning and segmentation

Progress and Challenges in Dynamical Systems Santiago Ibáñez, Jesús S. Pérez del Río, Antonio Pumariño, J. Ángel Rodríguez, 2013-09-20 This book contains papers based on talks given at the International Conference Dynamical Systems 100 years after Poincar held at the University of Oviedo Gijón in Spain September 2012 It provides an overview of the state of the art in the study of dynamical systems This book covers a broad range of topics focusing on discrete and continuous dynamical systems bifurcation theory celestial mechanics delay difference and differential equations Hamiltonian systems and also the classic challenges in planar vector fields It also details recent advances and new trends in the field including applications to a wide range of disciplines such as biology chemistry physics and economics The memory of Henri Poincar who laid the foundations of the subject inspired this exploration of dynamical systems In honor of this remarkable mathematician theoretical physicist engineer and philosopher the authors have made a special effort to place the reader at the frontiers of current knowledge in the discipline

Modeling in Fluid Mechanics Igor Gaissinski, Vladimir Rovenski, 2018-06-13 This volume is dedicated to modeling in fluid mechanics and is divided into four chapters which contain a significant number of useful exercises with solutions The authors provide relatively complete references on relevant topics in the bibliography at the end of each chapter

Mathematics and Climate Hans Kaper, Hans Engler, 2013-10-18 Mathematics and Climate is a timely textbook aimed at students and researchers in mathematics and statistics who are interested in current issues of climate science as well as at climate scientists who wish to become familiar with qualitative and quantitative methods of mathematics and statistics The authors emphasize conceptual models that capture important aspects of Earth's climate system and present the mathematical and statistical techniques that can be applied to their analysis Topics from climate science include the Earth's energy balance temperature distribution ocean circulation patterns such as El Niño Southern Oscillation ice caps and

glaciation periods the carbon cycle and the biological pump Among the mathematical and statistical techniques presented in the text are dynamical systems and bifurcation theory Fourier analysis conservation laws regression analysis and extreme value theory The following features make Mathematics and Climate a valuable teaching resource issues of current interest in climate science and sustainability are used to introduce the student to the methods of mathematics and statistics the mathematical sophistication increases as the book progresses and topics can thus be selected according to interest and level of knowledge each chapter ends with a set of exercises that reinforce or enhance the material presented in the chapter and stimulate critical thinking and communication skills and the book contains an extensive list of references to the literature a glossary of terms for the nontechnical reader and a detailed index

Nonlinear Dynamics and Chaos J Hogan,A.R Krauskopf,Mario di Bernado,R. Eddie Wilson,Hinke. M Osinga,Martin. E Homer,Alan. R Champneys,2002-08-01 Nonlinear dynamics has been successful in explaining complicated phenomena in well defined low dimensional systems Now it is time to focus on real life problems that are high dimensional or ill defined for example due to delay spatial extent stochasticity or the limited nature of available data How can one understand the dynamics of such sys
