Mycotoxins in Food and Beverages Didier Montet, Catherine Brabet, Sabine Schorr-Galindo, Ramesh C. Ray, 2021-06-02

Mycotoxins are secondary metabolites produced by fungi in a wide range of foods cereals peanut tree nuts dried fruits coffee cocoa grapes spices both in the field and after harvest particularly during storage They can also be found in processed foods of plant origin or by transfer in food products of animal milk eggs meat and offal Mycotoxins are of major concern since they can cause acute or chronic intoxications in both humans and animals which are sometimes fatal Many countries particularly in Europe have set maximum acceptable levels for mycotoxins in food and feed The book reviews the latest literature and innovations on important aspects of mycotoxins e g mycotoxin producing fungi and the related ecosystems mycotoxin occurrence toxicity analysis and management Quantitative estimation of impacts of climate change on mycotoxin occurrence have been made recently using predictive modelling There is also a growing interest in studying the occurrence and toxicity of multiple mycotoxins in food and feed including emerging or modified forms of mycotoxins Innovative tools have also developed to detect and quantify toxinogenic fungi and their toxins In order to reduce the use of chemicals that are harmful to the environment and health of consumers alternative methods of prevention and decontamination of mycotoxins were tested in pre and post harvest using microorganisms natural substances or radiation treatments

*Microbial Toxins in Food Systems: Causes, Mechanisms, Complications, and Metabolism* Abdel Moneim Elhadi Sulieman, Nawaf Ibrahim

Alshammari, 2024-08-22 When our food items become contaminated with pathogenic microorganisms these microorganisms secrete microbial toxins which promote infection by attacking the host tissue s immune system thereby leading to foodborne intoxication or poisoning in consumers Because these toxic microorganisms are not typically identifiable by taste smell or sight it is crucial to the safety of our food systems that they be detected through microbial testing As the title suggests *Microbial Toxins Causes Mechanisms Complications and Metabolism* is a comprehensive overview of the life of these toxins from their pathogenesis through to their implications for human and environmental health Including examples of salmonella botulism listeria and more as well as various mycotoxins this text will appeal to both microbiology researchers as well as food industry professionals Beyond foodborne illness this text also unpacks environmental toxicology and the role of microbial toxins in the development of novel anti cancer drugs Emerging techniques in the detection of microbial toxins will be discussed setting this text apart from existing books on the subject The use of proteomics in toxin identification for example allows for the determination of metabolic pathways and biomarkers of pathogenicity and resistance of biotoxins This text furthers the study of foodborne hazards and has important implications for the improvement of safety in the food industry

**Aflatoxin and Food Safety** Hamed K. Abbas, 2005-11-01 Aflatoxins are responsible for damaging up to 25% of the world's food crops resulting in large economic losses in developed countries and human and animal disease in under developed ones In addition to aflatoxins the presence of other mycotoxins particularly fumonisins brings additional concerns about the safety of food and field supplies The **Handbook of Food Analysis** Leo M.L.
