unique row identifiers Create database events that execute according to a schedule And a lot more MySQL Cookbook doesn't attempt to develop full fledged complex applications Instead it's intended to assist you in developing applications yourself by helping you get past problems that have you stumped [Beginning Database-Driven Application Development in Java EE](#) Yuli Vasiliev, 2009-04-21 Beginning Database Driven Application Development in Java™ EE Using GlassFish™ focuses on the open source GlassFish persistence engine This book shows Java programmers how to develop applications utilizing relational database technologies with examples using Oracle and MySQL and the GlassFish application development framework and deployment platform all based on Java EE The book explains in detail how you can organize your Java EE solution into a multilayer architecture placing most emphasis on how to implement the persistence and database tiers of an application Through many examples this book shows how you can efficiently use the Java Persistence features available in the Java EE platform Find out how you can greatly simplify the task of building the persistence layer of your Java EE application by moving some application logic into the underlying database utilizing database views stored programs and triggers The book also explains how to deploy Java EE applications to GlassFish a free open source Java EE 5 compliant application server **MySQL High Availability** Charles Bell, Sir Charles Bell, Mats Kindahl, Lars Thalmann, 2014-04-10 Server bottlenecks and failures are a fact of life in any database deployment but they don't have to bring everything to a halt This practical book explains replication cluster and monitoring features that can help protect your MySQL system from outages whether it's running on hardware virtual machines or in the cloud Written by engineers who designed many of the tools covered this book reveals undocumented or hard to find aspects of MySQL reliability and high availability knowledge that's essential for any organization using this database system This second edition describes extensive changes to MySQL tools Versions up to 5.5 are covered along with several 5.6 features Learn replication fundamentals including use of the binary log and MySQL Replicant Library Handle failing components through redundancy Scale out to manage read load increases and use data sharding to handle large databases and write load increases Store and replicate data on individual nodes with MySQL Cluster Monitor database activity and performance and major operating system parameters Keep track of masters and slaves and deal with failures and restarts corruption and other incidents Examine tools including MySQL Enterprise Monitor MySQL Utilities and GTIDs **Development of an illumination simulation software for the Moon's surface** René Schwarz, 2016-12-27 The German Aerospace Center DLR is developing a new holistic optical navigation system for all stages of spacecraft planetary approach and landing procedures The central feature of this new navigation system is its landmark based navigation Commonly craters are used as landmarks as they exhibit very characteristic shapes and they are stable over the long term with respect to shape structure and positioning However the flawless perception of these surface features by computers is a non trivial task A possibility of generating realistic surface images of celestial bodies with a significant number of craters and with well known local illumination conditions is essential for the development of new

navigation algorithms as well as a technique for estimating the local illumination direction on these images To date no software exists to generate artificial renderings of realistically illuminated planetary surfaces while determining the local solar illumination direction Having said this a surface illumination simulation software for solid planetary surfaces with a significant number of craters has been developed within a master's thesis at the Merseburg University of Applied Sciences and the German Aerospace Center DLR whereas all work has been done in the context of the Moon This software the Moon Surface Illumination Simulation Framework MSISF is the first software known to produce realistic renderings of the entire Moon's surface from virtually every viewpoint while simultaneously generating machine readable information regarding the exactly known parameters for the environmental conditions such as the local solar illumination angle for every pixel of a rendering showing a point on the Moon's surface To produce its renderings the MSISF maintains a global digital elevation model of the Moon using the latest data sets from the ongoing NASA Lunar Reconnaissance Orbiter mission The MSISF has also demonstrated its ability to not only produce single renderings but also whole series of renderings corresponding to a virtual flight trajectory or landing on the Moon The MSISF can also be modified for the rendering of other celestial bodies This book shows how these renderings will be produced and how they will be suitable for the development and testing of new optical navigation algorithms it is based upon the examination version of the original master's thesis
