Perspectives In Ethology Vol 11 Behavioral Design:

Perspectives in Ethology N.S. Thompson, 1995-05-31 A book rich and various in ideas and substance It belongs on the shelf of anyone wanting to keep up with what is happening in ethology Bioscience from a review of an earlier volume Beginning with Volume 11 Nicholas S Thompson takes over the editorship of this remarkable series For this volume contributors bring fresh perspectives to the subject of natural design Perspectives in Ethology Paul Patrick Gordon Bateson, Peter H. Klopfer, 1995 *Experimental Metaphysics* David Rose, 2017-06-29 Metaphysics almost entirely neglected by experimental philosophers is the central focus of *Experimental Metaphysics* The volume brings together a range of views aimed at addressing the question of how cognitive science might be relevant to metaphysics With contributions from cognitive scientists and philosophers chapters focus on theoretical and empirical issues involving the potential role of cognitive science in metaphysics Alongside topics such as free will objects and causation in which relevant empirical evidence is discussed and connected to relevant metaphysical issues more programmatic papers explore theoretical issues centered on the connection between cognitive science and metaphysics This balanced approach exposes metaphysicians to philosophically relevant work in cognitive science while showing cognitive scientists the ways in which their work might be important for philosophers Presenting cutting edge empirical and theoretical research *Experimental Metaphysics* pushes forward the discussion and encourages further engagement with issues at the intersection of cognitive science and metaphysics **The Neurobiology of Parental Behavior** Michael Numan, Thomas R. Insel, 2006-05-17 In addition to filling a need within the field of parental behavior this book contributes importantly to the growing area of emotional and motivational neuroscience A major part of neuroscience research at the whole organism level has been focused on cognitive neuroscience with an emphasis on the neurobiology of learning and memory but there has been a recent upsurge in research which is attempting to define the neural basis of basic motivational and emotional systems which regulate such behaviors as food intake aggression reproduction reward seeking behaviors and anxiety related behaviors In this book the emphasis is on the research findings obtained from rodents sheep and primates The authors goal of course was to provide a foundation that may help us understand the neurobiology of human parental behavior Indeed the last chapter attempts to integrate the non human research data with some human data in order to make some inroads toward an understanding of postpartum depression child abuse and child neglect Clearly motivational and emotional neuroscience has close ties to psychiatry and this connection will be very evident in the final chapter By understanding the neurobiology of parental behavior we are also delving into neurobiological factors which may have an impact on core human characteristics involved in sociality social attachment nurturing behavior and love In this very violent world it is hard to conceive of a group of characteristics that are more worthy of study *Oxford Studies in Experimental Philosophy Volume 4* Tania Lombrozo, Joshua Knobe, Shaun Nichols, 2021-12-30 The new field of experimental philosophy has emerged as the methods of psychological science have

been brought to bear on traditional philosophical issues Oxford Studies in Experimental Philosophy is the place to go to see outstanding new work in the field It features papers by philosophers papers by psychologists and papers co authored by people in both disciplines The series heralds the emergence of a truly interdisciplinary field in which people from different disciplines are working together to address a shared set of questions This fourth volume showcases the growing depth and breadth of the field Epistemology and moral psychology have been important foci of past work in experimental philosophy and the contributions in this volume attest to the ways in which empirical methods are being used to add nuance to previous claims both theoretical and empirical Alongside this progress on familiar topics we see an expansion to new areas in mind and metaphysics with studies exploring how people typically conceptualize different aspects of mind and different kinds of minds including the extension of agentive modes of thinking well beyond the mental The volume concludes where the field began with explicit attention to philosophical methodology and the ways in which empirical results can inform philosophical debates

Play and Exploration in Children and Animals Thomas G. Power, 1999-11-01 Play is a paradox Why would the young of so many species the very animals at greatest risk for injury and predation devote so much time and energy to an activity that by definition has no immediate purpose This question has long puzzled students of animal behavior and has been the focus of considerable empirical investigation and debate In this first comprehensive and state of the art review of what we have learned from decades of research on exploration and play in children and animals Power examines the paradox from all angles Covering solitary activity as well as play with peers siblings and parents he considers the nature development and functions of play as well as the gender differences in early play patterns A major purpose is to explore the relevance of the animal literature for understanding human behavior The nature and amount of children s play varies significantly across cultures so the author makes cross cultural comparisons wherever possible The scope is broad and the range multidisciplinary He draws on studies by developmental researchers in psychology and other fields ethologists anthropologists sociologists sociolinguists early childhood educators and pediatricians And he places research on play in the context of research on such related phenomena as prosocial behavior and aggression Finally Power points out directions for further inquiry and implications for those who work with young children and their parents Researchers and students will find Play and Exploration in Children and Animals an invaluable summary of controversies methods and findings practitioners and educators will find it an invaluable compendium of information relevant to their efforts to enrich play experiences

The Cognitive Underpinnings of Anthropomorphism Gabriella Airenti, Marco Cruciani, Alessio Plebe, 2019-10-04 The attribution of human traits to non humans animals artifacts or even natural events is an attitude deeply grounded in human mind It is frequent to see children addressing dolls and figures as if they were alive Adults often attribute mental states and emotions to animals In everyday life humans speak of events such as fires as if they possessed some form of intentionality a behavior sometimes shared also by scientists Furthermore a systematized form of anthropomorphism underlies most

religions The pervasiveness of this phenomenon makes it a particularly interesting object of psychological enquiry Psychologists have set out to understand which aspects of human mind are involved in this behavior its motivations and the circumstances favoring its enactment Moreover there is an ongoing debate among scientists about the merits or harm of anthropomorphism in the scientific study of animal behavior and in scientific discourse Despite the interest and the specificity of the topic most of the relevant studies are scattered across disciplines and have not built a systematic research framework This observation has motivated the collection of articles presented here under the unifying perspective of the cognitive underpinnings of anthropomorphism Within this general umbrella the authors included in this e book have explored the issues mentioned above from different points of view From their work it emerges that far from being the result of naive beliefs the exercise of anthropomorphism involves a multiplicity of mental abilities including perception and imagination They also show that the context and the interactive situation are crucial to understanding this phenomenon Some authors analyze the relationship between anthropomorphization and theory of mind abilities both in typical and atypical populations Finally others contributions have identified possible benefits deriving from the natural attitude to anthropomorphize as a design philosophy for robots and artifacts in general or as a useful heuristic in the scientific study of animal behavior

Mentalization Fredric N. Busch, 2011-02-25 Mentalization is the capacity to perceive and interpret behavior in terms of intentional mental states to imagine what others are thinking and feeling and is a concept that has taken the psychological and psychoanalytic worlds by storm This collection of papers carefully edited by Fredric Busch clarifies its import as an essential perspective for understanding the human psyche and interpersonal relationships The book is divided into theoretical research and clinical papers reflecting how the investigators thoughtfully and purposefully pursued each of these goals Those involved in identifying mentalization have also made consistent efforts to measure and research the concept Thus in addition to expanding the theoretical bases and implications of mentalization and identifying clinically useful applications the authors describe research that scientifically grounds the concept Mentalization addresses and expands upon a number of implications of mentalization These include What are the broader implications for mentalization with regard to social and evolutionary development How does mentalization interdigitate with other psychoanalytic models How is mentalization systematically assessed What clinical correlates have been found How do we understand variations in the capacity for mentalization even within a given individual What are the applications of mentalization in the clinical arena including specific disorders Readers of this volume will find their clinical work to be more productive and their view of the human psyche broadened Neurolaw: The Call for Adjusting Theory Based on Scientific Results José M.
