ABSTRACT

In this paper we report findings of a multidisciplinary study of online participation by culturally diverse participants in a distance adult education course offered in Canada and examine in detail three of the study's findings. First, we explore both the historical and cultural origins of "cyberculture values" as manifested in our findings, using the notions of explicit and implicit enforcement of those values and challenging the assumption that cyberspace is a culture free zone. Second, we examine the notion of cultural gaps between participants in the course and the potential consequences for online communication successes and difficulties. Third, the analysis describes variations in participation frequency as a function of broad cultural groupings in our data. We identify the need for additional research, primarily in the form of larger scale comparisons across cultural groups of patterns of participation and interaction, but also in the form of case studies that can be submitted to microanalyses of the form as well as the content of communicator's participation and interaction online.

INTRODUCTION AND BACKGROUND

The preconditions of cyberculture usually involve the linguistic and communication norms of Anglo-American societies in which the aggressive, competitive individual is enshrined. (Jordan, 2001, p. 13)

Intercultural communication is always a challenge, but even more so when it happens online in the absence of visual and oral cues or well-developed relationships. In computer-mediated courses, participants are involved in building learning communities. Culturally diverse individuals may hold widely different expectations of how to establish credibility, exchange information, motivate others, give and receive feedback, or critique or evaluate information.

In our recent study (Chase, Macfadyen, Reeder, & Roche, 2002), we began to explore the impact of cultural differences upon participation in a computer-mediated course offered by the University of British Columbia to a culturally diverse group of learners across Canada. The overall goal of the study was to test critically the widely held assumption that the use of standardized communications technology, implemented with competent professional pedagogy, will constitute sufficient conditions for successful communications and learning for culturally diverse cohorts participating in a distance learning program. Ascertaining the preconditions for successful online learning has potential significance for both policy and practice in distance learning. Recent studies of second language learning have begun to delineate in some detail the critical role of intercultural variables in mediated learning exchanges. Thorne (2003) for example develops the notions of *medium as cultural artifact* and *electronic cultures-of-use*, both of which we make extensive use of in our problematization of ostensibly culturally neutral e-learning tools in this study.

The Cyber Deterrence Problem Aaron F.

Brantly, 2020-06-15 The national security of the United States depends on a secure reliable and resilient cyberspace The inclusion of digital systems into every aspect of US national security has been underway since World War II and has increased with the proliferation of Internet enabled devices There is an increasing need to develop a robust deterrence framework within which the United States and its allies can dissuade would be adversaries from engaging in various cyber activities Yet despite a desire to deter adversaries the problems associated with dissuasion remain complex multifaceted poorly understood and imprecisely specified Challenges including credibility attribution escalation and conflict management remain ever present and challenge the United States in its efforts to foster security in cyberspace These challenges need to be addressed in a deliberate and multidisciplinary approach that combines political and technical realities to provide a robust set of policy options to decision makers The Cyber Deterrence Problem brings together a multidisciplinary team of scholars with expertise in computer science deterrence theory cognitive psychology intelligence studies and conflict management to analyze and develop a robust assessment of the necessary requirements and attributes for achieving deterrence in cyberspace Beyond simply addressing the base challenges associated with deterrence many of the chapters also propose

strategies and tactics to enhance deterrence in cyberspace and emphasize conceptualizing how the United States deters adversaries

Terrorist Use of Cyberspace and Cyber Terrorism: New Challenges and Responses Mehmet Nesip Ogun, 2015-10-08 ICT plays a crucial role in the pursuit of modernization in the countries of Slovenia Croatia Albania and Bulgaria which form the South Eastern European SEE region The quest for Euro Atlantic integration and the undeniable necessity for direct foreign investment have encouraged the SEE countries to invest in the development of cyber technology and it has become the dominant area for social economic and political interaction within the region This has had both positive and negative consequences This book presents the proceedings of the NATO Advanced Training Course ATC held in Ohrid former Yugoslav Republic of Macedonia in December 2014 The ATC addressed serious concerns about terrorist use of cyber technology in South Eastern Europe which not only has the potential to destabilize regional efforts to create a platform for increased development by creating a breeding ground for the training of extremists and the launching of cyber attacks but also represents a direct and indirect threat to the security and stability of other NATO partner countries The book will be of interest to all those involved in countering the threat posed by terrorist use of the Internet worldwide

Towards a Peaceful Development of Cyberspace Thomas Reinhold, 2024-04-01 The cyberspace and its global infrastructures are essential for our civilizations the economy and administration However cyberspace is also increasingly developing into an intelligence and military operational area visible in the creation of military cyber departments and the integration of cyberspace into states security and defense strategies Unfortunately many of the established toolset of transparency de escalation and arms control measures do not work for cyberspace due to its specific technical characteristics But how de escalation of state led conflicts in cyberspace can be achieved and how arms control of cyber weapons can be developed Based on a technical perspective with regard to the underlying political challenges the book follows an approach of adopting already existing technical measures from other fields of the computer science It presents a classification system for cyberweapons an approach for the mutual reduction of vulnerability stockpiles and provides an approach to prove the non involvement in a cyber conflict Beyond this it aims to provide some impulses regarding the responsibility and creative options of the computer science with a view to the peaceful development and use of cyberspace
