Proceedings Of The 1975 Predator Symposi:

Carnivore Conservation John L. Gittleman, 2001-06-28 Carnivores are the focus of intense attention and resources in conservation biology. It is often argued that because carnivores are at the top of the food chain if they are protected then other taxa will also be afforded adequate protection. Carnivores are also charismatic and compete with humans for dwindling space and environmental resources. In the past 10 years theoretical and empirical studies on carnivores have developed very quickly. This volume reviews and summarises the current state of the field, describes limitations and opportunities for carnivore conservation and offers a conceptual framework for future research and applied management. As such it will be of interest to students and researchers of conservation biology, mammalogy, animal behaviour, ecology and evolution.

Fisheries and Wildlife Research, 1979 Report on activities in the divisions of research **Animal Dispersal** N.C. Stenseth, W.Z. Lidicker, 2012-12-06 4 1 1 Demographic significance. Confined populations grow more rapidly than populations from which dispersal is permitted. Lidicker 1975, Krebs 1979, Tamarin et al 1984 and demography in island populations where dispersal is restricted differs greatly from nearby mainland populations. Lidicker 1973, Tamarin 1977, 1978, Gliwicz 1980 clearly demonstrating the demographic significance of dispersal. The prevalence of dispersal in rapidly expanding populations is held to be the best evidence for presaturation dispersal. Because dispersal reduces the growth rate of source populations it is generally believed that emigration is not balanced by immigration and that mortality of emigrants occurs as a result of movement into a sink of unfavourable habitat. If such dispersal is age or sex biased the demography of the population is markedly affected as a consequence of differences in mortality in the dispersive sex or age class. Habitat heterogeneity consequently underlies this interpretation of dispersal and its demographic consequences although the spatial variability of environments is rarely assessed in dispersal studies. **Home Ranges of Animals** Roger A. Powell, 2025-10-21 Animals have tremendous agency to understand the world around them and to plan how to take best advantage of that world to meet their requirements. Their perception of the world differs from humans and includes knowledge emphasizing different senses. This book argues that to understand animals home ranges which are integral to the behavior and ecology of animals, biologists must understand their cognition of their environments. Presenting diverse complementary approaches to studying home ranges, this book shows how using multiple approaches sheds a broad light on how and why animals behave as they do. The book also provides many examples showing how hypothesis driven research provides strong insights into animal behavior and ecology. **Recovery of Gray Wolves in the Great Lakes Region of the United States** Adrian P. Wydeven, Timothy R. van Deelen, Edward Heske, 2009-02-27 In this book we document and evaluate the recovery of gray wolves *Canis lupus* in the Great Lakes region of the United States. The Great Lakes region is unique in that it was the only portion of the lower 48 states where wolves were never completely extirpated. This region also contains the area where many of the first modern concepts of wolf conservation and research were developed. Early proponents of wolf conservation such as

Aldo Leopold Sigurd Olson and Durward Allen lived and worked in the region The longest ongoing research on wolf prey relations see Vucetich and Peterson Chap 3 and the first use of radio telemetry for studying wolves see Mech Chap 2 occurred in the Great Lakes region The Great Lakes region is the first place in the United States where Endangered wolf populations recovered All three states Minnesota Wisconsin and Michigan developed ecologically and socially sound wolf conservation plans and the federal government delisted the population of wolves in these states from the United States list of endangered and threatened species on March 12 2007 see Refsnider Chap 21 Wolf management reverted to the individual states at that time Although this delisting has since been challenged we believe that biological recovery of wolves has occurred and anticipate the delisting will be restored This will be the first case of wolf conservation reverting from the federal government to the state conservation agencies in the United States

Wolves on the Hunt L. David Mech, Douglas W. Smith, Daniel R. MacNulty, 2015-05-22 The wolf is an adept killer able to take down prey much larger than itself While adapted to hunt primarily hoofed animals a wolf or especially a pack of wolves can kill individuals of just about any species Combining behavioral data thousands of hours of original field observations research in the literature a wealth of illustrations and in the e book edition and online video segments from cinematographer Robert K Landis the authors create a compelling and complex picture of these hunters

The Scientific Basis for Conserving Forest Carnivores Leonard F. Ruggiero, 1994 This cooperative effort by USDA Forest Service Research and the National Forest System assesses the state of knowledge related to the conservation status of four forest carnivores in the western United States American marten fisher lynx and wolverine The conservation assessment reviews the biology and ecology of these species It also discusses management considerations stemming from what is known and identifies information needed Overall we found huge knowledge gaps that make it difficult to evaluate the species conservation status

The Return of the Wolf to Yellowstone Thomas McNamee, 1998-05-15 Is easy to see why this saga has stirred the imagination of a nation for it is indeed the environmental story of the decade

Wild Carnivores of New Mexico Jean-Luc E. Cartron, Jennifer K. Frey, 2024-02-15 Winner of the 2024 New Mexico Arizona Book Award for Reference In this first ever landmark study of New Mexico's wild carnivores Jean Luc E Cartron and Jennifer K Frey have assembled a team of leading southwestern biologists to explore the animals and the major issues that shape their continued presence in the state and region The book includes discussions on habitat evolving or altered ecosystems and new discoveries about animal behavior and range and it also provides details on the distribution habitat associations life history population status management and conservation needs of individual carnivore species in New Mexico Like Cartron's award winning *Raptors of New Mexico* *Wild Carnivores of New Mexico* shares the same emphasis on scientific rigor and thoroughness high readability and visual appeal Each chapter is illustrated with numerous color photographs to help readers visualize unique morphological or life history traits habitat research techniques and management and conservation issues Contributors Scott C Bender David L Bergman Stewart Breck

Barrett, 2012-12-06 In 1984 a conference called Wildlife 2000 Modeling habitat relationships of terrestrial vertebrates was held at Stanford Sierra Camp at Fallen Leaf Lake in the Sierra Nevada Mountains of California The conference was well received and the published volume Verner J M L Morrison and C J Ralph editors 1986 Wildlife 2000 modeling habitat relationships of terrestrial vertebrates University of Wisconsin Press Madison Wisconsin USA proved to be a landmark publication that received a book award by The Wildlife Society Wildlife 2001 populations was a followup conference with emphasis on the other major biological field of wildlife conservation and management populations It was

held on July 29 31 1991 at the Oakland Airport Hilton Hotel in Oakland California in accordance with our intent that this conference have a much stronger international representation than did Wildlife 2000 The goal of the conference was to bring together an international group of specialists to address the state of the art in wildlife population dynamics and set the agenda for future research and management on the threshold of the 21st century The mix of specialists included workers in theoretical as well as practical aspects of wildlife conservation and management Three general sessions covered methods modelling and conservation of threatened species *Report on Predator Damage Management in the West* U.S. Fish and Wildlife Service,1978 **Federal Register** ,1990-11-23 **Cougar** Maurice Hornocker,Sharon Negri,2009-12-15 The cougar is one of the most beautiful enigmatic and majestic animals in the Americas Eliciting reverence for its grace and independent nature it also triggers fear when it comes into contact with people pets and livestock or competes for hunters game Mystery myth and misunderstanding surround this remarkable creature The cougar s range once extended from northern Canada to the tip of South America and from the Pacific to the Atlantic making it the most widespread animal in the western hemisphere But overhunting and loss of habitat vastly reduced cougar numbers by the early twentieth century across much of its historical range and today the cougar faces numerous threats as burgeoning human development encroaches on its remaining habitat When Maurice Hornocker began the first long term study of cougars in the Idaho wilderness in 1964 little was known about this large cat Its secretive nature and rarity in the landscape made it difficult to study But his groundbreaking research yielded major insights and was the prelude to further research on this controversial species The capstone to Hornocker s long career studying big cats Cougar is a powerful and practical resource for scientists conservationists and anyone with an interest in large carnivores He and conservationist Sharon Negri bring together the diverse perspectives of twenty two distinguished scientists to provide the fullest account of the cougar s ecology behavior and genetics its role as a top predator and its conservation needs This compilation of recent findings stunning photographs and firsthand accounts of field research unravels the mysteries of this magnificent animal and emphasizes its importance in healthy ecosystem processes and in our lives **Wild Mammals of North America** George A.
