**Dynamical Systems** Anatole Katok, A. B. Katok, Boris Hasselblatt, 1995 This book provided the first self contained comprehensive exposition of the theory of dynamical systems as a core mathematical discipline closely intertwined with most of the main areas of mathematics The authors introduce and rigorously develop the theory while providing researchers interested in applications with fundamental tools and paradigms The book begins with a discussion of several elementary but fundamental examples These are used to formulate a program for the general study of asymptotic properties and to introduce the principal theoretical concepts and methods The main theme of the second part of the book is the interplay between local analysis near individual orbits and the global complexity of the orbit structure The third and fourth parts develop the theories of low dimensional dynamical systems and hyperbolic dynamical systems in depth Over 400 systematic exercises are included

in the text The book is aimed at students and researchers in mathematics at all levels from advanced undergraduate up
