Recombinant Dna And Cell Proliferation:

Recombinant DNA And Cell Proliferation Gary Stein, 2012-12-02 Recombinant DNA and Cell Proliferation focuses on the use of recombinant DNA technology in investigating the regulation of cell proliferation Topics include gene transfer for assessing the role of defined DNA sequences in triggering DNA replication nucleic acid hybridization probes for analyzing the regulation of specific genes during the cell cycle and cloned DNAs for studying genes expressed with proliferation and differentiation This book is organized into three sections encompassing 13 chapters and begins with a discussion on the expression of specific genes during the cell cycle This text also deals with topics such as the use of cloned SV40 DNA fragments to examine signals for cell proliferation expression of dihydrofolate reductase and thymidylate synthase genes in mammalian cells and gene expression during the cell cycle of Chlamydomonas reinhardtii The following chapters explore the expression of histone genes during the cell cycle in human cells organization and expression of eukaryotic ribosomal protein genes and expression of the alpha fetoprotein gene during development regeneration and carcinogenesis This book also introduces the reader to the role of the cell division cycle in induced differentiation gene regulation in muscle cells regulation of nonmuscle actin gene expression during early development and sequences at ends of cellular DNA molecules in relation to telomere replication and function An overview of the biochemical aspects of cell proliferation and the genes and gene products that are necessary and specific for cell proliferation concludes the book This book will be of value both to advanced students and to research scientists Current Catalog National Library of Medicine (U.S.), 1985 First multi year cumulation covers six years 1965 70 National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1985

Genetic Expression in the Cell Cycle G.M. Padilla, 2012-12-02 Genetic Expression in the Cell Cycle provides an understanding of the molecular mechanisms that govern the expression of genetic information during the cell cycle The initial five chapters describe the intimate relationships between the supramolecular complexes that form the basic structure of chromatin Emphasis is placed on the dynamics of cycle dependent changes in the structural organization of some of these components Subsequent chapters demonstrate that small nuclear RNAs SnRNA are actively involved in gene regulation in eukaryotic cells discuss the relationship between cell cycle regulation in the yeast Saccharomyces cerevisiae and transcription of ribosomal RNA genes and describe the use of conditional lethal mutants to study the regulation of the cell cycle of eukaryotic cells The remaining chapters discuss the concepts and methodologies employed to isolate and study specific cell cycle mutants of S cerevisiae the antiproliferative effect of interferon on cultured human fibroblasts and the role of cell membrane and related subcellular elements in the control of proliferation differentiation and cell cycle kinetics
