Recovery from Natural Disasters; Insurance Or Federal Aid? Howard Kunreuther,1973 **Recovery from Natural Disasters** Howard Kunreuther,1973 *Legislation on Interest Rates for Disaster Assistance* United States. Congress. Senate. Select Committee on Small Business,1979 Can Financial Markets be Tapped to Help Poor People Cope with Weather Risks? Donald Larson,Paul Siegel,Panos Varangis,2002 *Managing Environmental Risk Through Insurance* Paul K. Freeman,Howard Kunreuther,1997-06-30 Can insurance be used as a means to obtain compliance with environmental policy Answering this question requires examination of a broad mosaic of academic issues including current systems available for providing compensation and deterrence use of contracts including insurance as substitutes for tort law limitations of regulatory policy making by government agencies pre conditions for creation of insurance products and market mechanisms necessary for insurance to be purchased or sold The purpose of *Managing Environmental Risk Through Insurance* is to highlight the potential role that insurance and performance standards can play in managing environmental risk Insurance can play a significant role in dealing with one of the most problematic issues facing society today how to compensate for environmental exposures This book analyzes the ability of insurance to play a role in managing environmental risk It begins by outlining the role insurance plays in society in contrast to other societal tools for addressing risk government benefit programs and imposition of involuntary liability using the court system By so doing the book describes the comparative advantages of insurance The book then analyzes the insurability of the risks Finally the book applies the insurability analysis to three concrete environmental examples **The Financing of Catastrophe Risk** Kenneth A. Froot,2007-12-01 Is it possible that the insurance and reinsurance industries cannot handle a major catastrophe Ten years ago the notion that the overall cost of a single catastrophic event might exceed 10 billion was unthinkable With ever increasing property casualty risks and unabated growth in hazard prone areas insurers and reinsurers now envision the possibility of disaster losses of 50 to 100 billion in the United States Against this backdrop the capitalization of the insurance and reinsurance industries has become a crucial concern While it remains unlikely that a single event might entirely bankrupt these industries a big catastrophe could place firms under severe stress jeopardizing both policy holders and investors and causing profound ripple effects throughout the U S economy *The Financing of Catastrophe Risk* assembles an impressive roster of experts from academia and industry to explore the disturbing yet realistic assumption that a large catastrophic event is inevitable The essays offer tangible means of both reassessing and raising the level of preparedness throughout the insurance and reinsurance industries **Natural Hazards and Public Choice** Peter H. Rossi,James D Wright,Eleanor Weber-Burdin,2013-09-03 *Natural Hazards and Public Choice* The State and Local Politics of Hazard Mitigation presents a research project that emerged from a concern for estimating the balance of support versus opposition to prospective social policies that aim to reduce the risks of damage or injuries from major natural hazard events via the

regulation of land use and establishment of building and occupancy standards in high risk areas The volume begins with an overview of the research project and the main findings Separate chapters describe the study design assess the views of politically influential people regarding the seriousness of natural hazards measure the support for federal disaster policies and consider public opinion on hazards mitigation issues in California Subsequent chapters cover the National Flood Insurance Program NFIP patterns of activity influence and power among key positions and groups in local communities with respect to issues involving disasters and hazard mitigation activities at the state level

Fiscal Resilience to Natural Disasters Lessons from Country Experiences OECD,The World Bank,2019-05-20 This report presents the results of a study that compares country practices in the management of the financial implications of disasters

on government finances for a set of OECD member countries and partner economies particularly exposed to natural hazards

Disasters and the American State Patrick S. Roberts, 2013-10-28 Politicians and bureaucrats claim credit for the federal government's successes in preparing for and responding to disaster and they are also blamed for failures outside of government's control. New interventions have created precedents and established organizations and administrative cultures that accumulated over time and produced a trend in which citizens, politicians and bureaucrats expect the government to provide more security from more kinds of disasters. Despite the rhetoric, however, the federal government's increasingly bold claims and heightened public expectations are disproportionate to the ability of the federal government to prevent or reduce the damage caused by disaster. *Compensating Catastrophe Victims* Véronique Bruggeman, 2010-01-01 This book shows that amelioration of the current compensation solutions for disaster victims is indeed a possibility. In a heated yet often poorly informed debate, it offers clarity and insights regarding the financial compensation for victims of catastrophes which, in addition to raising academic interest, are certain to help build a framework for future policymakers and lawmakers faced with shaping compensation programmes for catastrophe victims. *Insurance Against Poverty* World Institute for Development Economics Research, 2005 Poor people in developing countries are often affected by droughts, floods, illness, crop failure, job loss and economic downturns. Much of their energy goes into coping with these shocks and into day to day survival. While insurance and credit markets combined with widespread social security provide an important cushion against poverty in rich countries, the need for immediate survival may lock the poor into persistent poverty in developing countries. The poor in developing countries do have informal mechanisms to cope with risk and misfortune. These are based on income diversification, risk avoidance, self insurance by saving together with family and community based mutual assistance. Nevertheless, the scope of these mechanisms remains limited. Repeated individual specific shocks such as illness or pests or covariate risks associated with drought, flood or recession undermine the ability of individuals and their families to cope with risk. We now know much more about vulnerability to risk and how poor people cope. Even more importantly, we have learned much about the large long term consequences of these risks which condemn many to persistent poverty and excludes them from economic growth. But there is much that can be done. The micro level studies that underpin this book offer new insights on how effective public action could be more effective in protecting the vulnerable against persistent poverty. Policy should focus on providing a comprehensive menu of ex ante and post crisis protection mechanisms including new forms of insurance, savings, safety nets and the means to strengthen the poor's asset base. Local communities have a big role to play; public funds should not be used to replace indigenous community based support networks; rather they should be used to build on the strengths of these networks to ensure broader and more effective protection. With numerous thematic chapters and case studies of both best practice and of failure from a mix of low income and middle income countries across the developing world, this book evaluates alternatives in widening insurance and protection provision and makes an

important contribution to the topical field of insurance and risk **To Investigate the Adequacy and Effectiveness of Federal Disaster Relief Legislation** United States. Congress. Senate. Committee on Public Works. Subcommittee on Disaster Relief,1973 Helping Communities Recover from Natural Disasters ,2012 *S. 1043, the Natural Disaster Protection and Insurance Act of 1995* United States. Congress. Senate. Committee on Commerce, Science, and Transportation,1996 **The Federal Cost of Disaster Assistance** United States. Congress. House. Committee on Transportation and Infrastructure. Subcommittee on Water Resources and Environment,1998 **H.R. 1856, Natural Disaster Protection Partnership Act of 1995** United States. Congress. House. Committee on Transportation and Infrastructure. Subcommittee on Water Resources and Environment,1996 Recovering From Catastrophes Peter May,1985-06-07 This book examines the evolution of federal disaster relief policy assesses problems with current policy and provides an understanding of the issues likely to be involved in future deliberations about federal policy While examining its formulation May describes this policy making in two different political environments the charged atmosphere immediately following the catastrophe and secondly the calm between catastrophes Local state and federal government conflicts are illustrated in a case study of Mount St Helens intergovernmental partnerships in this arena are discussed in relation to other relief efforts May stresses the political implications of disaster relief in his analysis of the electoral benefits and influence politicians derive from their attempts to influence federal disaster relief efforts Finally he addresses the economic considerations and future directions for federal disaster relief policy Three distinct policy approaches and their tradeoffs provide an overview of the options for future policy making
