Comparative Risk Assessment and Environmental Decision Making Igor Linkov, Abou Bakr Ramadan, 2006-03-02 Decision making in environmental projects is typically a complex and confusing process characterized by trade offs between socio political environmental and economic impacts Comparative Risk Assessment CRA is a methodology applied to facilitate decision making when various activities compete for limited resources CRA has become an increasingly accepted research tool and has helped to characterize environmental profiles and priorities on the regional and national level CRA may be considered as part of the more general but as yet quite academic field of multi criteria decision analysis MCDA Considerable research in the area of MCDA has made available methods for applying scientific decision theoretical approaches to multi criteria problems but its applications especially in environmental areas are still limited The papers show that the use of comparative risk assessment can provide the scientific basis for environmentally sound and cost efficient policies strategies and solutions to our environmental challenges

The Metabolism of Islands Simron Singh, Marina Fischer-Kowalski, Marian Chertow, 2021 This book makes the case for why we should care about islands and their sustainability Islands are hotspots of biocultural diversity and home to 600 million people that depend on one sixth of the earth's total area including the surrounding oceans for their subsistence Today they are at the frontlines of climate change and face an existential crisis Islands are however potential hubs of innovation that are uniquely positioned to be leaders in sustainability and climate action This volume argues that a full fledged program on island industrial ecology is urgently needed with the aim of offering policy relevant insights and strategies to sustain small islands in an era of global environmental change The nine contributions in this volume cover a wide range of applications of socio metabolic research from flow accounts to stock analysis and their relationship to services in space and time They offer insights into how reconfiguring patterns of resource use will allow island governments to build resilience and adapt to the challenges of climate change

Asphalt Pavements Patrick Lavin, 2003-09-02 Asphalt Pavements provides the know how behind the design production and maintenance of asphalt pavements and parking lots Incorporating the latest technology this book is the first to focus primarily on the design production and maintenance of low volume roads and parking areas Special attention is given to determining the traffic capacity required thickness and asphalt mixture type for parking applications Topics covered include material information such as binder properties testing grading and selection construction information such as mixing plant operation proportioning mixture placement and compaction and design information such as thickness

and mixture design methods and guidelines on applying these to highways city streets and parking Areas It is an essential practical guide aimed at those engineers and architects who are not directly involved in the asphalt industry but who nonetheless need to have a good general knowledge of the subject Asphalt Pavements provides a novice with enough information to completely design construct and specify an asphalt pavement The Utilization of Slag in Civil Infrastructure Construction George C. Wang, 2016-06-24 The Utilization of Slag in Civil Infrastructure Construction strives to integrate the theory research and practice of slag utilization including the production and processing of slags The topics covered include production and smelting processes for metals chemical and physical properties of slags pretreatment and post treatment technology to enhance slag properties potential environmental impact mechanisms of potential expansion special testing methods and characteristics slag processing for aggregate and cementitious applications suitability of slags for use in specific applications overall properties of materials containing slags and commercialization and economics The focus of the book is on slag utilization technology with a review of the basic properties and an exploration of how its use in the end product will be technically sound environment friendly and economic Covers the production processing and utilization of a broad range of ferrous non ferrous and non metallurgical slags Provides information on applicable methods for a particular slag and its utilization to reduce potential environmental impacts and promote natural resource sustainability Presents the overall technology of transferring a slag from the waste stream into a useful materials resource Provides a detailed review of the appropriate utilization of each slag from processing right through to aggregate and cementitious use requirements

Construction, Demolition and Disaster Waste Management Erik K.

Lauritzen, 2018-09-03 Construction and Demolition Waste CDW from the construction maintenance renovation and demolition of buildings and structures represents a large proportion of the waste in industrialized societies Compared to other forms such as household waste more than 90% of CDW can be used as a resource and a substitute for construction materials especially for primary natural raw materials Reuse recovery and recycling depends on the quality and market for the materials and the environmental impact of the processes for conversion of CDW from old structures to its use in new structures However the utilization today of CDW products as secondary resources is marginal Most CDW is deposited or used as fill material and the opportunities of high quality recycling are generally neglected This book presents the opportunities for the sustainable and resource efficient utilisation of CDW focusing on recycling of concrete and masonry as the major forms of CDW The recycling of gypsum timber mineral wool asphalt and other types are also described Its aim is to present a chain of value and material streams in the transformation of obsolete buildings and structures into new buildings and structures It takes a holistic view focusing on the lifecycle economy the circular economy and integrated management aspects of various scenarios ranging from high industrial urban renewal to debris removal and management after disasters and conflicts It is based on the author s 35 years of research and development combined with practical international experience within the demolition and recycling area It addresses students architects civil engineers building owners public authorities and others working in urban planning demolition and resource management in the building and construction sector and in the reconstruction of damaged buildings after disasters and wars
