Red Ape Orangutans And Human Origins:

The Red Ape Jeffrey H. Schwartz, 1987 A fascinating tour of evolutionary biology that calls into question our implicit social and political commitment to the current theories offering persuasive evidence that our closest relative is not the gorilla but the orangutan 16 page black and white photo insert Illustrations **Orang-utan Biology** Jeffrey H. Schwartz, 1988 Orangutans are a particularly important and interesting primate group because of their close evolutionary proximity to humans Yet there is no comprehensive single reference source covering the anatomy and morphology of these animals their biology or their evolution In this unique volume a group of internationally recognized experts and researchers review the literature and present new data on the skeletal anatomy reproductive physiology and anatomy neuroanatomy behavior evolutionary genetics and paleontology of orangutans It is the most thorough and comprehensive reference available on the biology and evolution of this fascinating primate group **Apes and Human Evolution** Russell H. Tuttle, 2014-02-17 Russell Tuttle synthesizes a vast literature in primate evolution and behavior to explain how apes and humans evolved in relation to one another and why humans became a bipedal tool making culture inventing species distinct from other hominoids He refutes the theory that we are sophisticated instinctively aggressive and destructive killer apes **Comparative Anatomy and Phylogeny of Primate Muscles and Human Evolution** Rui Diogo, Bernard A. Wood, 2012-01-11 This book challenges the assumption that morphological data are inherently unsuitable for phylogeny reconstruction argues that both molecular and morphological phylogenies should play a major role in systematics and provides the most comprehensive review of the comparative anatomy homologies and evolution of the head neck pectoral and upper limb muscles of primates Chapters 1 and 2 provide an introduction to the main aims and methodology of the book Chapters 3 and 4 and Appendices I and II present the data obtained from dissections of the head neck pectoral and upper limb muscles of representative members of all the major primate groups including modern humans and compare these data with the information available in the literature Appendices I and II provide detailed textual attachments innervation function variations and synonyms and visual high quality photographs information about each muscle for the primate taxa included in the cladistic study of Chapter 3 thus providing the first comprehensive and up to date overview of the comparative anatomy of the head neck pectoral and upper limb muscles of primates The most parsimonious tree obtained from the cladistic analysis of 166 head neck pectoral and upper limb muscle characters in 18 primate genera and in representatives of the Scandentia Dermoptera and Rodentia is fully congruent with the evolutionary molecular tree of Primates thus supporting the idea that muscle characters are particularly useful to infer phylogenies The combined anatomical materials provided in this book point out that modern humans have fewer head neck pectoral and upper limb muscles than most other living primates but are consistent with the proposal that facial and vocal communication and specialized thumb movements have probably played an important role in recent human evolution This book will be of interest to primatologists comparative anatomists functional morphologists

zoologists physical anthropologists and systematians as well as to medical students physicians and researchers interested in understanding the origin evolution homology and variations of the muscles of modern humans Contains 132 color plates

The Jesuit and the Skull Amir Aczel,2008-11-04 From the New York Times bestselling author of Fermat's Last Theorem an extraordinary story Philadelphia Inquirer of discovery evolution science and faith In 1929 French Jesuit priest Pierre Teilhard de Chardin was a part of a group of scientists that uncovered a skull that became known as Peking Man a key evolutionary link that left Teilhard torn between science and his ancient faith and would leave him ostracized by his beloved Catholic Church His struggle is at the heart of The Jesuit and the Skull which takes readers across continents and cultures in a fascinating exploration of one of the twentieth century's most important discoveries and one of the world's most provocative pieces of evidence in the roiling debate between creationism and evolution **Human Origins 101** Holly M.

Dunsworth,2007-08-30 What should the average person know about science Because science is so central to life in the 21st century science educators and other leaders of the scientific community believe that it is essential that everyone understand the basic concepts of the most vital and far reaching disciplines Human Origins 101 does exactly that This accessible volume provides readers whether students new to the field or just interested members of the lay public with the essential ideas of the origins of humans using a minimum of jargon and mathematics Concepts are introduced in a progressive order so that more complicated ideas build on simpler ones and each is discussed in small bite sized segments so that they can be more easily understood Human Origins 101 enables students and the general public to understand the basic concepts underlying our knowledge of our evolution as a species This small volume covers A brief history of paleoanthropology and the discovery of human's place in nature Evolution and the Origin of Life Clues to human origins from genetics The fossil and archaeological records The distinctive traits that makes us human The diversity of modern humans With a bibliography glossary and discussion of hoaxes fringe theories and hot button issues Human Origins 101 provides the perfect starting point for anyone wishing to understand how scientists know how humans evolved Discovery of Bharat Through Hindustan and British

India TRIBHUWAN NATH SINGH,2021-10-25 The book is a synthesis of the ancient Bharatiya texts with the latest scientific findings for their authenticity historicity and relevance to the modern perspective The ancient Bharatiya texts were burnt by external invaders and the retrieved texts were misinterpreted as mythological gossips in the English versions Bharat was said to be in the Dark Age before the entry of the Britishers The book in 14 chapters clarifies the misgivings and proves the Bharatiya civilization over 20 000 years old on the basis of modern research references and latest archaeological findings Computer simulation of celestial configuration proves Ramayan 7000years old historical account of Ram and Mahabharat over 5000 years old historical event In the background of largescale bloodshed and global warming despite all efforts of the UNO a need of Spiritual Weapon Truth and Nonviolence promoted by Mahatma Gandhi as Satyagrah has been projected to save the humanity from the zooming Dooms Day in Discovery of Bharat through Hindustan and British India **The**

Evolution Clare L. Boulanger, 2012-04-23 In a writing style that will captivate those new to the subject Boulanger presents an understanding of human biological and cultural evolution that is both scientific and humanistic in keeping with classic anthropological ideals The aim of this reasonably priced text is to help students think critically about what being human has been what it is at present and what it may be in the future While the book focuses on the anthropological subfields of biological anthropology and archaeology information and insights are also drawn from cultural anthropology and anthropological linguistics Boulanger's absorbing treatment in contrast to other texts on human evolution features an opening chapter that seeks to negotiate fairly without defensiveness or condescension a pathway for creationists to follow into the topic The next three chapters provide background on the history of evolutionary science the biology of inheritance and population change and primatology Chapters 5 through 9 focus on human biocultural evolution from the time of the ancestor we share with chimpanzees through the development of agriculture and the founding of states The last chapter deals with the issue of race how it has affected our interpretation of the past and how it continues to influence the present In addition to an extensive glossary the fully illustrated textbook features numerous topic enhancing sidebars questions for discussion and review and student exercises *Human Origins, Genome and People of India: Genomic, Palaeontological and Archaeological Perspectives*

The Neglected Ape Biruté M.F. Galdikas, R.D. Nadler, N. Rosen, Lori K. Sheeran, 2013-11-11 The orangutan is the most highly endangered species of great ape Orangutans are threatened by deforestation poaching the illegal pet trade and the isolation and fragmentation of dwindling wild populations Their conservation is impeded by certain aspects of their ecology e

g a rain forest habitat and certain features of their life history e g an eight to twelve year interbirth interval Added to the U S Endangered Species List in 1970 the orangutan is now clearly on the road to extinction The number of wild orangutans in Borneo and Sumatra is currently estimated to have decreased to between 12 300 and 20 571 individuals Only 2% of original orangutan habitat is protected and some of these areas are now being destroyed Clearly attention to ecology demography censusing rehabilitation and conservation is essential if the orangutan is to survive in the wild beyond the next century The protection of orangutans is a complex multifaceted problem involving such pressing issues as human poverty overpopulation and the economic development of Southeast Asia Although the orangutan has been placed in Appendix I of the Convention on International Trade in Endangered Species of Wild Fauna and Flora CITES more orangutans were sold illegally in Taiwan between 1990 and 1993 than are housed in all the world s zoos In the past scientific and public attention has centered on the African apes For this reason the sole Asian great ape the orangutan has been called the neglected ape **Neanderthals**

Revisited Katerina Harvati, Terry Harrison, 2007-03-14 This volume presents the cutting edge research of leading scientists re examining the major debates in Neanderthal research with the use of innovative methods and exciting new theoretical approaches Coverage includes the re evaluation of Neanderthal anatomy inferred adaptations and habitual activities developmental patterns phylogenetic relationships and the Neanderthal extinction new methods include computer tomography 3D geometric morphometrics ancient DNA and bioenergetics The book offers fresh insight into both Neanderthals and modern humans Encyclopedia of Anthropology H. James Bix, 2006 Focuses on physical social and applied anthropology archaeology linguistics and symbolic communication Topics include hominid evolution primate behaviour genetics ancient civilizations cross cultural studies and social theories The World from Beginnings to 4000 BCE Ian Tattersall, 2008-02-01 To be human is to be curious And one of the things we are most curious about is how we came to be who we are how we evolved over millions of years to become creatures capable of inquiring into our own evolution In this lively and readable introduction renowned anthropologist Ian Tattersall thoroughly examines both fossil and archaeological records to trace human evolution from the earliest beginnings of our zoological family Hominidae through the appearance of Homo sapiens to the Agricultural Revolution He begins with an accessible overview of evolutionary theory and then explores the major turning points in human evolution the emergence of the genus Homo the advantages of bipedalism the birth of the big brain and symbolic thinking Paleolithic and Neolithic tool making and finally the enormously consequential shift from hunter gatherer to agricultural societies 10 000 years ago Focusing particularly on the pattern of events and innovations in human biological and cultural evolution Tattersall offers illuminating commentary on a wide range of topics including the earliest known artistic expressions ancient burial rites the beginnings of language the likely causes of Neanderthal extinction the relationship between agriculture and Christianity and the still unsolved mysteries of human consciousness Complemented by a wealth of illustrations and written with the grace and accessibility for which Tattersall is widely admire

The World from Beginnings to 4000 BCE invites us to take a closer look at the strange and distant beings who over the course of millions of years would become us **Asian Paleoanthropology** Christopher J. Norton, David R.

Braun, 2010-08-26 This volume brings together a group of authors that address the question of the first out of Africa into Asia c 2 Ma The scope of the book is comprehensive as it covers almost every major region of Asia The primary goal of this volume is to provide an updated synthesis of the current state of the Asian paleoanthropological and paleoenvironmental records Papers include detailed studies of the theoretical constructs underlying the move out of Africa including detailed reconstructions of the paleoenvironment and possible migration routes Other papers detail the Plio Pleistocene archaeological and hominin fossil records of particular regions *The Palaeolithic Settlement of Asia* Robin

Dennell, 2008-12-15 This book provides the first analysis and synthesis of the evidence of the earliest inhabitants of Asia before the appearance of modern humans 100 000 years ago Asia has received far less attention than Africa and Europe in the search for human origins but is no longer considered of marginal importance Indeed a global understanding of human origins cannot be properly understood without a detailed consideration of the largest continent In this study Robin Dennell examines a variety of sources including the archaeological evidence the fossil hominin record and the environmental and climatic background from Southwest Central South and Southeast Asia as well as China He presents an authoritative and comprehensive framework for investigations of Asia s oldest societies challenges many long standing assumptions about its earliest inhabitants and places Asia centrally in the discussions of human evolution in the past two million years

Genomes and What to Make of Them Barry Barnes, John Dupre, 2011-02 The announcement in 2003 that the Human Genome Project had completed its map of the entire human genome was heralded as a stunning scientific breakthrough our first full picture of the basic building blocks of human life Since then boasts about the benefits and warnings of the dangers of genomics have remained front page news with everyo **Natural Selection** Richard G. Delisle, 2021-02-27 This book contests the general view that natural selection constitutes the explanatory core of evolutionary biology It invites the reader to consider an alternative view which favors a more complete and multidimensional interpretation It is common to present the 1930 1960 period as characterized by the rise of the Modern Synthesis an event structured around two main explanatory commitments 1 Gradual evolution is explained by small genetic changes variations oriented by natural selection a process leading to adaptation 2 Evolutionary trends and speciation events are macroevolutionary phenomena that can be accounted for solely in terms of the extension of processes and mechanisms occurring at the previous microevolutionary level On this view natural selection holds a central explanatory role in evolutionary theory one that presumably reaches back to Charles Darwin s *Origin of Species* a view also accompanied by the belief that the field of evolutionary biology is organized around a profound divide theories relying on strong selective factors and those appealing only to weak ones If one reads the new analyses presented in this volume by biologists historians and philosophers this divide seems to be collapsing at a rapid pace

opening an era dedicated to the search for a new paradigm for the development of evolutionary biology. Contrary to popular belief, scholars' position on natural selection is not in itself a significant discriminatory factor between most evolutionists. In fact, the intellectual space is quite limited if not nonexistent between on the one hand Darwinists who play down the central role of natural selection in evolutionary explanations and on the other hand non-Darwinists who use it in a list of other evolutionary mechanisms. The mechanism-centered approach to evolutionary biology is too incomplete to fully make sense of its development. In this book, the labels created under the traditional historiography—Darwinian Revolution, Eclipse of Darwinism, Modern Synthesis, Post-Synthetic Developments—are thus re-evaluated. This book will not only appeal to researchers working in evolutionary biology but also to historians and philosophers.

21st Century Anthropology: A Reference Handbook H. James Birx, 2010-06-10. *21st Century Anthropology: A Reference Handbook* highlights the most important topics, issues, questions, and debates any student obtaining a degree in the field of anthropology ought to have mastered for effectiveness in the 21st century. This two-volume set provides undergraduate majors with an authoritative reference source that serves their research needs with more detailed information than encyclopedia entries but in a clear, accessible style devoid of jargon, unnecessary detail, or density. **Key Features:** Emphasizes key curricular topics, making it useful for students researching for term papers, preparing for GREs, or considering topics for a senior thesis, graduate degree, or career. Comprehensive, providing full coverage of key subthemes and subfields within the discipline, such as applied anthropology, archaeology, and paleontology, sociocultural anthropology, evolution, linguistics, physical and biological anthropology, primate studies, and more. Offers uniform chapter structure so students can easily locate key information within these sections: Introduction, Theory, Methods, Applications, Comparison, Future Directions, Summary, Bibliography, Suggestions for Further Reading, and Cross-References. Available in print or electronically at SAGE Reference Online, providing students with convenient, easy access to its contents.

Wild Man from Borneo Robert Cribb, Helen Gilbert, Helen Tiffin, 2014-01-31. *Wild Man from Borneo* offers the first comprehensive history of the human orangutan encounter. Arguably the most humanlike of all the great apes, particularly in intelligence and behavior, the orangutan has been cherished, used, and abused ever since it was first brought to the attention of Europeans in the seventeenth century. The red ape has engaged the interest of scientists, philosophers, artists, and the public at large in a bewildering array of guises that have by no means been exclusively zoological or ecological. One reason for such a long-term engagement with a being found only on the islands of Borneo and Sumatra is that like its fellow great apes, the orangutan stands on that most uncomfortable dividing line between human and animal, existing for us on what has been called the dangerous edge of the garden of nature. Beginning with the scientific discovery of the red ape more than three hundred years ago, this work goes on to examine the ways in which its human attributes have been both recognized and denied in science, philosophy, travel literature, popular science literature, theatre, museums, and film. The authors offer a provocative analysis of the origin of the name orangutan, trace how the ape has

been recruited to arguments on topics as diverse as slavery and rape and outline the history of attempts to save the animal from extinction Today while human populations increase exponentially that of the orangutan is in dangerous decline The remaining wild men of Borneo are under increasing threat from mining interests logging human population expansion and the widespread destruction of forests The authors hope that this history will by adding to our knowledge of this fascinating being assist in some small way in their preservation
