Manifolds Paul Bracken, 2017-01-18 Differential geometry is a very active field of research and has many applications to areas such as physics and gravity for example The papers in this book cover a number of subjects which will be of interest to workers in these areas It is hoped that the papers here will be able to provide a useful resource for researchers with regard to current fields of research in this important area

The Parameterization Method for Invariant Manifolds Àlex Haro, Marta Canadell, Jordi-Lluís Figueras, Alejandro Luque, Josep Maria Mondelo, 2016-04-18 This monograph presents some theoretical and computational aspects of the parameterization method for invariant manifolds focusing on the following contexts invariant manifolds associated with fixed points invariant tori in quasi periodically forced systems invariant tori in Hamiltonian systems and normally hyperbolic invariant manifolds This book provides algorithms of computation and some practical details of their implementation The methodology is illustrated with 12 detailed examples many of them well known in the literature of numerical computation in dynamical systems A public version of the software used for some of the examples is available online The book is aimed at mathematicians scientists and engineers interested in the theory and applications of computational dynamical systems

An Introduction to Dynamical Systems and Chaos G. C. Layek, 2024-02-23 This book discusses continuous and discrete nonlinear systems in systematic and sequential approaches

The unique feature of the book is its mathematical theories on flow bifurcations nonlinear oscillations Lie symmetry analysis of nonlinear systems chaos theory routes to chaos and multistable coexisting attractors The logically structured content and sequential orientation provide readers with a global overview of the topic A systematic mathematical approach has been adopted featuring a multitude of detailed worked out examples alongside comprehensive exercises The book is useful for courses in dynamical systems and chaos and nonlinear dynamics for advanced undergraduate graduate and research students in mathematics physics and engineering The second edition of the book is thoroughly revised and includes several new topics center manifold reduction quasi periodic oscillations Bogdanov Takens periodbubbling and Neimark Sacker bifurcations and dynamics on circle The organized structures in bi parameter plane for transitional and chaotic regimes are new active research interest and explored thoroughly The connections of complex chaotic attractors with fractals cascades are explored in many physical systems Chaotic attractors may attain multiple scaling factors and show scale invariance property Finally the ideas of multifractals and global spectrum for quantifying inhomogeneous chaotic attractors are discussed

Encyclopedia of Nonlinear Science Alwyn Scott, 2006-05-17 In 438 alphabetically arranged essays this work provides a useful overview of the core mathematical background for nonlinear science as well as its applications to key problems in ecology and biological systems chemical reaction diffusion problems geophysics economics electrical and mechanical oscillations in engineering systems lasers and nonlinear optics fluid mechanics and turbulence and condensed matter physics among others

Singularities of Differentiable Maps V.I. Arnold, Alexander Varchenko, S.M. Gusein-Zade, 1985-01-01 there is nothing so enthralling so grandiose nothing that stuns or captivates the human soul quite so much as a first course in a science After the first five or six lectures one already holds the brightest hopes already sees oneself as a seeker after truth I too have wholeheartedly pursued science passionately as one would a beloved woman I was a slave and sought no other sun in my life Day and night I crammed myself bending my back ruining myself over my books I wept when I beheld others exploiting science for personal gain But I was not long enthralled The truth is every science has a beginning but never an end they go on for ever like periodic fractions Zoology for example has discovered thirty five thousand forms of life A P Chekhov On the road In this book a start is made to the zoology of the singularities of differentiable maps This theory is a young branch of analysis which currently occupies a central place in mathematics it is the crossroads of paths leading from very abstract corners of mathematics such as algebraic and differential geometry and topology Lie groups and algebras complex manifolds commutative algebra and the like to the most applied areas such as differential equations and dynamical systems optimal control the theory of bifurcations and catastrophes short wave and saddle point asymptotics and geometrical and wave optics
