The Art and Science of Making the New Man in Early 20th-Century Russia Yvonne Howell, Nikolai Kremmentsov, 2021-12-02 The idea that morally mentally and physically superior new men might replace the currently existing mankind has periodically seized the imagination of intellectuals leaders and reformers throughout history This volume offers a multidisciplinary investigation into how the new man was made in Russia and the early Soviet Union in the first third of the 20th century The traditional narrative of the Soviet new man as a creature forged by propaganda is challenged by the strikingly new and varied case studies presented here The book focuses on the interplay between the rapidly developing experimental life sciences such as biology medicine and psychology and countless cultural products ranging from film and fiction dolls and museum exhibits to pedagogical projects sculptures and exemplary agricultural fairs With contributions from scholars based in the United States Canada the UK Germany and Russia the picture that emerges is emphatically more complex contradictory and suggestive of strong parallels with other new man visions in Europe and elsewhere In contrast to previous interpretations that focused largely on the apparent disconnect between utopian new man rhetoric and the harsh realities of everyday life in the Soviet Union this volume brings to light the surprising historical trajectories of new man visions their often obscure origins acclaimed and forgotten champions unexpected and complicated results and mutual interrelations In short the volume is a timely examination of a

recurring theme in modern history when dramatic advancements in science and technology conjoin with anxieties about the future to fuel dreams of a new and improved mankind **DHEW Publication** ,1976 **Quadrennial Report of the Division of Biological Effects** United States. Experiments in Democracy Benjamin J. Hurlbut,2017-01-31 Human embryo research touches upon strongly felt moral convictions and it raises such deep questions about the promise and perils of scientific progress that debate over its development has become a moral and political imperative From in vitro fertilization to embryonic stem cell research cloning and gene editing Americans have repeatedly struggled with how to define the moral status of the human embryo whether to limit its experimental uses and how to contend with sharply divided public moral perspectives on governing science Experiments in Democracy presents a history of American debates over human embryo research from the late 1960s to the present exploring their crucial role in shaping norms practices and institutions of deliberation governing the ethical challenges of modern bioscience J Benjamin Hurlbut details how scientists bioethicists policymakers and other public figures have attempted to answer a question of great consequence how should the public reason about aspects of science and technology that effect fundamental dimensions of human life Through a study of one of the most significant science policy controversies in the history of the United States Experiments in Democracy paints a portrait of the complex relationship between science and democracy and of U S society s evolving approaches to evaluating and governing science s most challenging breakthroughs *Quadrennial Report of the Division of Biological Effects 1971-1974* United States. Bureau of Radiological Health. Division of Biological Effects,1976 **Readings in Evolution, Genetics, and Eugenics** Horatio Hackett Newman,1921
