Mathematics in Civilization H. L. Resnikoff, Raymond O'Neil Wells (Jr.), 1973 How mathematics shaped and was shaped by human events Trigonometry navigation cartography algebra calculus and related disciplines from ancient Greece through the twentieth century Bibliography 203 figures 7 tables 14 photos **The Art of More** Michael Brooks, 2022-01-18 An illuminating millennia spanning history of the impact mathematics has had on the world and the fascinating people who have mastered its inherent power Counting is not innate to our nature and without education humans can rarely count past three beyond that it's just more But once harnessed by our ancestors the power of numbers allowed humanity to flourish in ways that continue to lead to discoveries and enrich our lives today Ancient tax collectors used basic numeracy to fuel the growth of early civilization navigators used clever geometrical tricks to engage in trade and connect people across vast distances astronomers used logarithms to unlock the secrets of the heavens and their descendants put them to use to land us on the moon In every case mathematics has proved to be a greatly underappreciated engine of human progress In this captivating sweeping history Michael Brooks acts as our guide through the ages He makes the case that mathematics was one of the foundational innovations that catapulted humanity from a nomadic existence to civilization and that it has since then been instrumental in every great leap of humankind Here are ancient Egyptian priests Babylonian bureaucrats medieval architects dueling Swiss brothers renaissance painters and an eccentric professor who invented the infrastructure of the online world Their stories clearly demonstrate that the invention of mathematics was every bit as important to the human species as was the discovery of fire From first page to last *The Art of More* brings mathematics back into the heart of what it means to be human **Mathematics in Civilization, Third Edition** Howard L. Structuralism and Structures Charles Earl Rickart, 1995 This book is devoted to an analysis of the way that structures must enter into a serious study of any subject and the term structuralism refers to the general method of approaching a subject from the viewpoint of structure A proper appreciation of this approach requires a deeper understanding of the concept of structure than is provided by the simple intuitive notion of structures that everyone possesses to some degree Therefore a large part of the discussion is devoted directly or indirectly to a study of the nature of structures themselves A formal definition of a structure plus some basic general properties and examples is given early in the discussion Also in order to clarify the general notions and to see how they are used the later chapters are devoted to an examination of how structures enter into some special fields including linguistics mental phenomena mathematics and its applications and biology especially in the theory of evolution Because the author is a mathematician certain mathematical ideas have influenced greatly the choice and approach to the material covered In general however the mathematical influence is not on a technical level and is often only implicit Even the chapter on mathematical structures is nontechnical and is about rather than on mathematics Only in the last chapter and earlier in three short sections does one find any of the expected formal

Early Chinese Work in Natural Science Joseph C.Y. Chen,1996-03-01 This book re examines the nature of early Chinese work in natural science on the basis of original records analysis and artifacts discovered in recent decades by archaeological explorations of China s past It presents a concise account of early scientific ideas and thoughts of nature and their effect on the development of natural science It is suggested that the traditional characterization of early Chinese work in natural science requires substantial modification The absence of early Chinese participation in the development of modern science is not as commonly assumed a consequence of lacking early scientific tradition in ancient China It is argued that the concept of inhibitive factors is dubious without taking their dynamical relationships into account and that socio economical and political influence has to be considered when seeking answers to the major setbacks in science and technology in China The book also shows that there is no basis for the claims saying that acoustics and astronomy in China have their roots in Babylon
