mobile systems services and devices have become functional design objects that we care deeply about. Although their look, feel, and features impact our everyday lives as we orchestrate them in concert with a plethora of other computing technologies, these artifacts are not well understood or created through traditional methods of user-centered design and usability engineering. Contrary to more traditional IT artifacts, they constitute holistic user experiences of value and pleasure that require careful attention to the variety, complexity, and dynamics of their usage. Hence, the design of mobile interactions proposed in this book transcends existing approaches by using the ensemble of form and context as its central unit of analysis. As such, it promotes a designerly way of achieving convergence between form and context through a contextually grounded wholeness-sensitive and continually unfolding process of design.

Enterprise Information Systems V Olivier Camp, Joaquim Filipe, Slimane Hammoudi, Mario G. Piattini, 2006-02-27. This book comprises a set of papers selected from those presented at the fifth International Conference on Enterprise Information Systems (ICEIS 2003) held in Angers, France, from 23 to 26 April 2003. The conference was organized by the Supérieure d'Électronique de l'Ouest (ESEO) of Angers, France, and the Escola Superior de Tecnologia de Setúbal, Portugal. Since its first edition in 1999, ICEIS focuses on real-world applications and aims at bringing together researchers, engineers, and practitioners interested in the advances and business applications of information systems. As in previous years, ICEIS 2003 held four simultaneous tracks covering different aspects of enterprise computing: Databases and Information Systems, Integration, Artificial Intelligence, and Decision Support Systems; Information Systems Analysis and Specification; and Software Agents and Internet Computing. Although ICEIS 2003 received 546 paper submissions from over 50 countries, only 80 were accepted as full papers and presented in 30-minute oral presentations. With an acceptance rate of 15%, these numbers demonstrate the intention of preserving a high-quality forum for future editions of this conference. From the articles accepted as long papers for the conference, only 32 were selected for inclusion in this book. Additional keynote lectures, tutorials, and industrial sessions were also held during ICEIS 2003, and for the first time this year, the 1st Doctoral Consortium on Enterprise Information Systems gave PhD students an opportunity to present their work to an international audience of experts in the field of information

Fair, 2018-10-08 Composite systems that integrate microelectromechanical and microelectrofluidic MEF components with electronics are emerging as the next generation of system on a chip SOC designs However there remains a pressing need for a structured methodology for MEFS design automation including modeling techniques and simulation and optimization tools Integrating top down and bottom up design philosophies Microelectrofluidic Systems presents the first comprehensive design strategy for MEFS This strategy supports hierarchical modeling and simulation from the component level to the system level It leads to multi objective optimization tools valuable in all phases of the design process from conceptualization to final manufacturing The authors begin by defining the basic variables and elements needed to describe MEFS behavior then model that behavior across three layers of abstraction the low level component high level reconfigurable architecture and bio chemical application layers They have developed a hierarchical integrated design environment with SystemC and present its architecture and associated functional packages Microelectrofluidic Systems is visionary in its leverage of electronic design principles for microsystem design and heralds a new era of automated SOC design The strategy it presents holds the potential for significant reductions in design time and life cycle maintenance costs and its techniques and tools for robust design and application flexibility can lead to the high volume production needed for the inevitably growing product market
