Whitcomb, 2012-12-02 The Mycoplasmas Volume III Plant and Insect Mycoplasmas is a volume of a comprehensive three volume series encompassing various facets of mycoplasmaology It attempts not only to present an extensive and critical review of the rapidly expanding field of plant and insect mycoplasmas

but also to integrate these important subdisciplines into the total field of mycoplasmaology This volume in particular shows relevant information on a group of helical mycoplasmas spiroplasmas stressing their part in plant and insect diseases It discusses the tick borne spiroplasmas and their possible role in vertebrate disease Other suspected mycoplasmal plant diseases vector transmission of mycoplasmas and spiroplasmas and the chemotherapy of mycoplasmal plant diseases are also described This book will serve as a standard reference work for mycoplasmaologists as well as for other interested microbiologists cellular and molecular biologists membrane biochemists clinicians veterinarians plant pathologists and entomologists

Serological Diagnosis of Certain Human, Animal and Plant Diseases Moslih Al-Moslih, 2012-03-21 This book explains the concept of serological methods used in laboratory diagnoses of certain bacteria mycoplasmas viruses in humans animals and plants certain parasitic agents as well as autoimmune disease The authors present up to date information concerning the serological methods in laboratory diagnosis of such infectious diseases Section one deals with the serological methods for bacteria Section 2 deals with serological methods in human animal and plant viruses Section 3 is concerned with the serological laboratory diagnosis of echinococcus and human toxocariasis agents The last section deals with serological laboratory methods in the diagnosis of coeliac disease

Plant and Insect Mycoplasma Techniques M. J. Daniels, 2012-12-06 Only 14 years have passed since the first publication appeared which implicated mycoplasmas as agents of plant disease The diseases themselves have been known for much longer indeed clover phyllody a typical example was described in the seventeenth century well before any animal mycoplasma diseases had been documented The early history of plant mycoplasmas is described in Chapter 2 and one obvious conclusion to be drawn from the frustrating experiences of the earlier workers is that the experimental methods at their disposal were simply inadequate for the task Progress in science depends critically upon the development of new methods Although important advances have been made in plant and insect mycoplasmaology notably in the discovery of spiroplasmas many intractable problems remain Most plant mycoplasmas cannot yet be cultured in vitro and their natural plant habitat the phloem is one of the most difficult plant tissues for the experimenter to handle placing severe restrictions on the type of experiments which can be performed in vivo It is clear that radically new methods may be required to solve these problems A survey of the progress which has been made shows that

application of techniques from a wide range of disciplines has been necessary A successful individual or group of workers must possess the skills of a plant pathologist a plantsman a plant physiologist a light and electron microscopist a bacteriologist a biochemist an immunologist an ento mologist a virologist and a molecular geneticist

Methods in Mycoplasmaology V2 Joseph Tully,2012-12-02 Methods in Mycoplasmaology Volume II Diagnostic Mycoplasmaology is the second of a two volume series that resulted from cumulative efforts to meet the need for standardized techniques in mycoplasmaology The book is organized into five sections Section A discusses techniques for isolating mycoplasmas from humans These include the recovery of mycoplasmas from the respiratory and genitourinary tracts from blood and special tissues and serological Identification of mycoplasmas from humans Section B focuses on techniques for isolating mycoplasmas from animals including the recovery and identification of avian bovine caprine ovine canine and feline mycoplasmas Section C presents techniques for isolating mycoplasmas from cell cultures These include agar and broth techniques the use of indicator cell lines and DNA fluorochrome staining Section D discusses techniques for isolating mycoplasmas from plants and insects Section E describes some of the techniques that are useful in evaluating the pathogenicity of mycoplasmas ureaplasmas and spiroplasmas Section F defines some of the techniques useful in virus detection by electron microscopy and presents methods for isolating and characterizing viruses from both mycoplasmas and spiroplasmas
