Thurston, 2012-12-06 Current problems associated with the mycotoxicoses include the recognition of an animal disease as being a mycotoxicosis and confirmation of diagnosis of the mycotoxicosis by satisfactory laboratory methods By gathering a vast amount of scientific literature diagnosticians can provide themselves with suitable information for making such a diagnosis However the increased number of reported intoxications caused by fungi the wide range in diversity of disease conditions and the chemical compounds causing the mycotoxicoses and the ever changing and rapid developments in the technology of mycotoxin analysis has made the gathering and assimilation of sufficient information by the diagnostician an insurmountable task This is the reason for development of the symposium and the publication of this book the first time that the subject of diagnosis of mycotoxicoses has been assembled in a single publication and as a compilation of topic papers by experts in this subject area The UJNR panel on toxic microorganisms is interested in all aspects of intoxications by microorganisms as evidenced by its annual joint meetings in either the United States or Japan and its involvement in sponsoring numerous symposia and several publications in this broad scientific area The overall mission of the National Animal Disease Center includes research efforts in the improvement or establishment of diagnostic methods for animal diseases The UJNR panel and the NADC provided the funds and encouragement for the development of a symposium on the diagnosis of mycotoxicoses in the United States and Tapan

Mycotoxins in Plant Disease A. Logrieco, John A. Bailey, L. Corazza, B.M. Cooke, 2013-12-01 There is an urgent need to expand our knowledge of both the nature of the toxigenic fungi that are widespread on economically important plants and the effect of their toxic secondary metabolites on human health Information about the production of mycotoxins by plant pathogens particularly by species of *Fusarium* *Aspergillus* and *Penicillium* their occurrence in infected plants as well as their role in the plant pathogen interaction for example as virulence

pathogenicity factors is a pre requisite for preventing plant disease and hence for reducing the levels of mycotoxin contamination Fusarium infections in cereals and other crops are a particular problem world wide and recent epidemics on wheat in Europe the USA and Canada have again focused attention on this problem Furthermore species of *Aspergillus* and *Penicillium* and their related mycotoxins particularly Ochratoxin A represent another consistent problem on cereals and grapes especially in Europe where 40% of the global grape crop is grown The aim of this publication is to gather together specialist updated reviews based on papers originally presented during a Workshop of EU Cost Action 835 entitled Agriculturally Important Taxigenic Fungi held in Rome 7-8 October 1999 at the Plant Pathology Research Institute We hope the diversity of the contents will stimulate discussion encourage the sharing of information and result in cross fertilization of ideas needed for the solution of the present problems This special issue will be of particular value to interdisciplinary scientists and especially mycologists mycotoxicologists plant pathologists and those concerned about the quality of food and food products
