galaxies We know that the Universe itself came into existence with the Big Bang some 13.7 billion years ago and even now galaxies are receding from each other with ever increasing speed This book takes you through the intellectual journey of mankind unraveling the mysteries of the Cosmos Starting from Aristotle's Earth centered Universe it will take you step by step to the Copernican Sun centered Universe to Hubble's expanding Universe to the Big Bang to the currently accepted accelerating Universe In the process the book explores the origin of space time black hole black hole radiation dark matter dark energy quantum gravity string theory all in terms comprehensible to general audiences

Mysteries of the Universe-Unveiled Satya Prakash Verma,2015-03-21 In spite of the fact that the story of Blind Students and the Elephant is merely a story the same has been repeated several times in the history of the mankind right from the primordial times till to date in fact this is the way science has gradually grown on its journey of evolution Scientists have to face similar situations on many occasions they never get full information before devising any theory instead they discover part truths in several steps each of which is discovered after long periods of time This is analogous to concept developed by a blind man who forms an idea about the elephant by touches only one of its body part Scientists can therefore consider only one aspect of a problem at a time they encounter with other aspects of the same problem at a much later point of time At times such a situation might lead to misconceptions Sometimes such misconceptions conceived by some renowned personalities are even considered to be very brilliant ideas and valuable achievements As a result heritage of falsified knowledge had been transferred several times in the past to at least next 3-4 generations This becomes possible because common man blindly follows renowned persons who are considered to be wise normally no one even bothers to verify the truth this is the greatest misfortune of the human kind Misjudging or regarding such misconceptions as valuable discoveries might cause science to divagate from its path to find out absolute truth a very long and valuable time might also be lost in elimination of such misconceptions

New Eyes on the Universe Stephen Webb,2012-05-19 New Eyes on the Universe Twelve Cosmic Mysteries and the Tools We Need to Solve Them gives an up to date broad overview of some of the key issues in modern astronomy and cosmology It describes the vast amount of observational data that the new generation of observatories and telescopes are currently producing and how that data might solve some of the outstanding puzzles inherent in our emerging world view Included are questions such as What is causing the Universe to blow itself apart What could be powering the luminous gamma ray bursters Where is all the matter in the Universe Do other Earths exist Is there intelligent life out there The renowned author explains clearly without recourse to mathematics why each question is puzzling and worthy of research Included in the study of the wide range of sensitive and powerful instruments used by scientists to try and solve these problems are ones which capture electromagnetic radiation and telescopes for cosmic rays neutrinos gravitational waves and dark matter This book discusses twelve areas of active astronomical research ranging from the nature of dark energy to the existence or otherwise of extraterrestrial civilizations and devotes one chapter to each topic Although astronomers tackle each of these questions using

information gleaned from all possible wavelengths and sources and this is emphasized throughout the book in this work the author dedicates each chapter to a particular observational method One chapter covers X ray telescopes for investigating black holes while another uses infrared telescopes to learn more about planetary information **Mysteries of the Universe** Lela Nargi,2021 Has the universe always existed Scientists have looked further into space and discovered the galaxies moving Were they once closer together If scientists look far enough can they discover where our universe started Budding astronomers will learn all about the universe in this in depth look at space science Mysteries of the Universe J. C. Vintner,2012-07-16 Imagine what an epic impact this would have if mankind discovered not only that we re not alone but also that aliens are actually humans living in the distant reaches of the universe who seeded Earth to ensure survival of the species outside of more dangerous areas In the probability of quantum mechanics this is one possible outcome Creative alternative and esoteric philosophical concepts of existence How did the universe really begin Can we fluidly access our subconscious and communicate with each other Did the Egyptians build pyramids differently than previously conceived These questions along with many more are addressed in Mysteries of the Universe J C Vintner s second volume of the Ancient Earth Mysteries series Volume II Philosophy covers selected topics examining ancient cultures and their philosophical influence on the world while touching upon mankind s position in the universe Explore new avenues of thinking through the mind s eye and find out how we can change our future for the better Mysteries of the Universe provides food for new thought as compelling inspiration for understanding our quantum purpose in the cosmos
