From Mythic to Linear Maria Nikolajeva,1991-01-01 Now available in paperback In this radically new approach to text typology Maria Nikolajeva examines the depiction of time in literature for children Nikolajeva identifies a continuum of texts ranging from those that depict non linear time typical of archaic or mythical thought to those that express linearity typical of contemporary mainstream literature The author argues that literature is a deconstruction a displacement of myth and that it

depicts a symbolic coming of age process rather than a strictly representational reflection of a concrete reality The texts are categorized by the degree to which the coming of age process is accomplished the movement is from an initial condition of primary harmony Arcadia Paradise Utopia through different stages toward either a successful or a failed passage From Mythic to Linear is a broad study encompassing a number of children s novels from different epochs and countries Scandinavian British American Canadian Australian South African and East European The international character contributes a better knowledge of children s literature from different parts of the world widening the horizons of children s literature research too often confined to one particular country Nikolajeva s unique approach allows her to disregard the traditional and some would argue obsolete division of children s novels into realism and fantasy With its unique approach and broad international scope From Mythic to Linear will be of interest to all those interested in children s literature and in comparative literature in general Includes bibliography and footnotes

All the Colors of Quantum Entanglement Bruno Del Medico, 2022-05-18 Pages 330 58 illustrations The book is divided into three parts In the first part The intuitions the author deals with the most relevant hypotheses on the illusory reality of the perceptible world The existence of a level of consciousness that transcends matter has been envisaged by the great thinkers We find this idea in Plato s Myth of the Cave in Berkeley s Immaterialistic Theory in the Psychology of Form The most authoritative source lies in the works on the collective unconscious and on the theory of synchronicity by Carl Jung In the second part Confirmations the author describes in an elementary but detailed way the path of quantum physics from Thomas Young s double slit experiment to the phenomena of the superposition of states and quantum correlation Through these privileged keys it is possible to understand quantum entanglement In the third part Perspectives the author describes the theories developed by David Bohm on the quantum potential on the implicated universe and on the holographic vision of the cosmos Everything is explained with absolute simplicity without the use of mathematical formulas and with the help of many illustrations Humanity from its very beginnings wanted to investigate the origin and composition of things to discover their functioning and their intimate purpose The universally used method is to break down objects into smaller and smaller parts then analyzing them with every possible technique from visual investigation to chemical reactions This still happens today For example if a scientist wants to discover the chemical and physical structure of a cube of granite he will break it into smaller and smaller pieces until it is divided into individual atoms However if the scientist himself wants to investigate the individual particles that make up the atom he receives an incredible surprise The granite cube behaves like an ice cube would The scientist sees the matter that becomes fog evaporates disappears between his fingers Solid matter becomes energy that vibrates The single particles are transformed into fluctuating waves without any solid corporeality At the subatomic level matter is no longer solid matter it becomes something different Elementary particles deceive us They look like solid specks if someone observes them but they behave like vibrating waves when they are not observed Atoms practically only contain vacuum On the surface we believe we

can touch weigh manipulate and measure matter But in its most intimate composition matter becomes a ripple of emptiness energy information wave or vibration What seems to us solid material in its most intimate essence is no longer solid material At this point it is clear that we can no longer speak of a single reality Depending on the levels of observation from the extremely small to the infinitely large there are many realities all different but all absolutely true Or perhaps there are many aspects of a higher reality still unknown All philosophies and religions have always hypothesized a zone of the spirit transcending matter no one however has ever been able to provide proof of its existence Today quantum physics is opening a huge window on horizons that until the last century we could not have imagined The confirmations come from the experiments carried out successfully especially those relating to the phenomenon of quantum entanglement
