"Quantas idéias existiram na história, as quais eram inconcebíveis dez anos antes de aparecerem?" (Pyotr Dostoyevsky).

O crescente número de abordagens baseadas em genômica e o avanço tecnológico proporcionado pelo Projeto Genoma estão gerando uma revolução histórica na sociedade, em especial na área de saúde, levando à redefinição na patofisiologia, prevenção e terapêutica de diversas condições. Embora a enfermagem seja a maior força de trabalho ministrando cuidados de saúde em todo o mundo, a maioria dos enfermeiros ainda não teve a iniciativa de confrontar-se com esses desafios, muitas vezes por falta de fontes de informação atualizadas e contextualizadas à sua prática cotidiana, outras vezes por limitações pessoais como, por exemplo, o domínio de línguas estrangeiras, fundamental nessa era da globalização. Portanto, os profissionais de enfermagem necessitam de literatura qualificada na área de genética, que enfoque questões específicas do cuidar e das funções de liderança que podem exercer junto à equipe de saúde, pois esse profissional terá papel central no planejamento e na execução do cuidado de saúde baseado em genômica. Assim, acredita-se na possibilidade do desenvolvimento de uma visão abrangente e da elaboração de modelos humanistas para compreender o impacto da genética sobre as famílias e populações em diferentes cenários sociais e culturais.
