

Transport Deregulation and Privatization

Knowles and Hall

DEFINITION

- Revision, reduction, or elimination of laws and regulations that hinder free competition in supply of goods and services, thus allowing market forces to drive the economy. **Deregulation**, however, doesn't mean no control or laissez faire.
- **Privatization** is the process of transferring an enterprise or industry from the public sector to the private sector. The public sector is the part of the economic system that is run by government agencies.

Argentina's Transport Privatization and Re-Regulation

Antonio Estache,2016 Argentina s policy for reform of the transport sector has been a mix of competition in the market and through concessions for the market Capacity has increased demand has grown and prices and services have improved Public financing has not been eliminated but it has been drastically reduced When Argentina initiated reform of its transport sector in 1989 it had few models to follow It was the first Latin American country to privatize its intercity railroad to explicitly organize intraport competition and to grant a private concession to operate its subway It was second after Japan to privatize its urban commuter railways and one of the first in the developing world to grant road concessions to private operators Argentina s experience shows that transport privatization and deregulation provide efficiency gains that can be delivered to users Despite unexpectedly high residual subsidy requirements fiscal costs are lower services have improved and new investment is taking place Argentina s decade long experience shows that the reform process involves learning by doing Inexperienced new regulators quickly face the challenges in controlling monopoly power and providing long run incentives for private investment Designing sustainable reform requires a commitment by government to minimize its role in the sector and to respect its original promises to both users and concessionaires Argentina has learned the importance of building up the regulatory capacity needed to monitor contracts especially when initial uncertainty about demand and cost conditions is strong and renegotiation is the probable outcome of daring reform The government s main challenge in monitoring contracts is to get enough information to reach a balance in its decisions about distributing efficiency gains fairly between consumers and private investors This is one area in which Argentina may not yet have met the challenge As the last wave of contract extensions in rail and roads comes to an end one issue is likely to be the need for better targeting of subsidies for the poor
