Privatization And Emerging Equity Markets:

Privatization and Emerging Equity Markets Ira W. Lieberman, Christopher D. Kirkness, 1998-01-01 The text provides an overview of privatization and emerging equity markets describes the role of privatization providing critical mass for new stock markets and examines investment opportunities that deepen existing stock markets Emerging Equity Markets Mr. Robert Alan Feldman, Mr. Manmohan S. Kumar, 1994-03-01 Since the mid 1980s there has been a very substantial increase in stock market activity in many developing countries This paper first examines the main characteristics of the emerging stock markets and illustrates the evolution of equity prices in these markets over the last decade It then discusses the reasons for the markets growth and assesses the extent to which domestic policies as well as external factors have played a role This is followed by a discussion of the likely benefits of these markets the effects which any abrupt correction in stock prices could have for the economy and the ways in which these markets can be made more efficient **The Challenges of Privatization** Bernardo Bortolotti, Domenico Siniscalco, 2004-03-11 From 1997 to 2001 more than 4 000 privatization operations have been carried out in more than 100 countries bringing in government revenues of over 1 362 billion dollars The phenomenon which grew exponentially at the end of the 1990s and then abruptly slowed down had dramatic consequences on the performance of state owned enterprises and a significant impact on industrialized countries as well as emerging and less developed economies Yet there have been surprisingly few attempts to provide a systematic empirical account of the privatization process at the worldwide level Why do governments privatize Why do some countries accomplish large scale privatization programmes and others never privatize at all Is privatization a trend or a cycle Furthermore how do governments privatize Do governments really transfer ownership and control of state owned enterprises or does private ownership tend to coexist with public control This book provides some answers to these important questions trying to test research hypotheses set forth by the recent economic theory of privatization Comprehensive cross country empirical analyses carried out over a period of more than twenty years are used in the book to show that privatization has taken place all over the world sometimes spontaneously more often under the pressure of economic and budgetary constraints Several of the goals of the privatization have been met but despite proclamations and programmes only a small minority of countries has carried out a genuine privatization process completely transferring ownership of state owned enterprises to the private sector A lack of political will is to some extent at the root of this reluctance However this reluctance can be traced back partly to structural factors that would make an orderly privatization difficult such as the absence of developed capital markets appropriate regulation and suitable institutions **Market Revolution in Latin America** Masaaki Kotabe, R.P.C. Leal, 2001-06-20 The ratification in 1994 of the North American Free Trade Agreement among the United States Canada and Mexico awakened them to look to the south of the US border This book offers an analysis of trade and liberalization movements in Latin America and explores macro and micro financial implications of investing in Latin American countries

In Good Times Prepare for Crisis Ira Lieberman, 2018-10-09 Sovereign debt crises are a little like the weather One can get ready to endure them and maybe take some steps to lessen their impact but so far it hasn't been possible to prevent them Like the weather they just keep happening That's the overriding thesis of this book tracing the major debt crises of the past century starting with the Great Depression and running through the recent Great Recession Written by a former World Bank expert on debt crises this book discusses best practices for how such crises can be resolved As the painful experience of the past decade reminded everyone frequent debt crises and defaults do great damage to economies and cause vast personal hardship But resolving them has proven difficult both economically and politically and has taken time almost always requiring a lender of last resort such as a country's central bank or the International Monetary Fund Too often efforts to end debt crises have been little more than a palliative and the debt overhang from one crisis contributes to the next as illustrated by the ongoing saga in Greece Both private and sovereign debts have increased substantially since the 2008 crisis with inadequate deleveraging This debt overhang leaves countries vulnerable and with limited maneuverability to address the next crisis This book does not pretend to describe how debt crises can be prevented But it does draw useful lessons from recent crises that can help economists bankers policymakers and others resolve the inevitable future crises with the least possible damage

The Politics of Equity Finance in Emerging Markets Department of Political Science Case Western Reserve University Kathryn C. Lavelle Professor, 2004-09-24 Emerging market stock issuance relative to GDP rose in the late twentieth century to levels that roughly matched that of advanced industrial markets Nonetheless the connection between owning shares of emerging market stock and the ability to influence the management of these firms remains fundamentally different from the analogous institutional connection that has evolved in industrial markets The reasons for the differences in emerging markets are both historical and political in nature That is local equity markets have had the objective of providing for some degree of local ownership and control of large economic entities since the late nineteenth century However local markets have operated under different global political structures since that time ranging from imperialism to world wars to sovereign developmental states to neo liberal states Shares issued under these different structures have been reconfigured over time resulting in a lack of convergence along either the Anglo American or Continental models of corporate governance The author uses a political science paradigm to explain the growth of emerging equity markets She departs from conventional economic explanations and examines politics at the micro level of large issues of emerging market stock The second half of the book presents case studies dealing with emerging market countries in Latin America Asia Russia and Eastern Europe Africa and the Middle East The case studies connect the regional state and firm levels to detail the multiple ownership and control arrangements and to dispel the notion that mere quantitative growth of these markets will lead to a convergence in financial institutional structures along the lines of the industrial core of the world economy

Emerging Equity Markets in Middle Eastern Countries Mr. Manmohan S. Kumar, Mr. Mohamed A. El-Erian, 1994-09-01 Within a

broad framework for analyzing portfolio capital flows to developing countries the paper undertakes a comparative analysis of equity markets in six Middle Eastern countries The analysis based primarily on a range of quantitative indicators identifies the principal characteristics of these markets including relative to international comparators and examines associated structural features This along with an analysis of the informational efficiency of selected markets in the region provides a basis for the subsequent review of policies for enhancing the role of equity markets in the macroeconomy of Middle Eastern countries

Privatization in Transition Economies Ira W. Lieberman, Daniel J. Kopf, 2008 Annotation **Investment Prospects in a Sample of Arab Stock Exchanges** Kamal Naser, 1998-11-18 In the last few years policy makers in most Arab countries have recognized the role of the private sector in shaping their economies Furthermore as long term economic growth is dependent on the provision of funds to finance domestic capital formation these countries are undergoing a process of economic reform to diversify their economies and to privatize public assets As effective privatization programs should be met by well prepared and fully equipped stock markets governments in the Arab countries are paying attention to domestic capital markets as a way of enhancing the supply of money This study assesses the changes in the economic conditions in Bahrain Egypt Jordan Kuwait Morocco Oman Qatar Saudi Arabia Tunisia and the United Arab Emirates and the performance of their stock markets over the past eight years

The Crisis of Caregiving B. Mandell, 2013-05-14 This book discusses the crisis of caregiving as it affects parents seeking to provide good care for their children and people who care for their aged or disabled relatives Discussed are alternatives to the present welfare system a description of the current safety net programs and an analysis of the privatization of social services

Frontier Emerging Equity Markets Securities Price Behavior and Valuation Oliver S. Kratz, 2007-08-28 Frontier Emerging Equity Markets Securities Price Behavior and Valuation uses the Russian example to illustrate the intricate mechanics of frontier emerging equity market analysis Frontier markets are those equity markets that do not benefit from the same degree of securities transparency and information dissemination as future emerging markets In many cases frontier equity markets are those which have been created almost literally overnight without the infrastructure and institutional readiness of the nations in which they are located During the 1990s frontier emerging markets have formed a new investment asset class which requires a very different set of valuation metrics from mature emerging markets In developing a multi stage approach to the understanding and valuing of such markets this book uses the case of the Russian frontier equity market to illustrate topics such as the relationship between equity market infrastructure and valuation during the genesis period of an emerging financial market evolving market efficiency and the crucial role of depository receipt programs in the development of these markets Further this book develops the first comprehensive framework for valuing a frontier equity market The role of equity risk premium as it affects early dynamic equity valuation is also covered in order to illuminate important drivers of securities price performance The book closes by discussing the philology of the frontier market valuation debate in which every market participant is an important

purveyor of information and a contributor to the final valuation dimension of equities The main asset used to present the empirical concepts is a complete research database drawn from actual frontier market investing which previously had been unavailable to academic researchers As an active institutional asset management professional at a major Wall Street investment firm the author marries academic theories such as market efficiency and market segmentation to the real world of high stakes and high risk frontier market investing This book illustrates the applicability and in some cases the uselessness of financial theory when applied to this new and rising asset class It opens the discussion of equity valuation theory for an environment where many conventional rules of asset price determination need to be rewritten As the first research level monograph exclusively dedicated to frontier emerging equity market analysis it offers a unique dual perspective on how academic financial research finds it a complementary and sometimes antagonistic counterpart of real life investment decision making This book can help both professional investors and students of finance to understand frontier equity market valuation and development

Human Rights Standards and the Responsibility of Transnational Corporations Michael K. Addo,1999-09-01 What is the nature and scope of corporate responsibility with regard to human rights Should companies themselves be responsible for human rights violations involving themselves or their subsidiaries What principles should guide business in countries known to violate human rights Is self regulation sufficient or are corporations best regulated by national or international codes and on what should these codes be based These are some of the many questions

which this ground breaking collection of essays seeks to address as it assesses the value of applying human rights standards to transnational corporations The increasing involvement of corporations in the public domain and the steady reduction of governmental involvement in commercial and social undertakings has created a desperate need to rethink the nature and role of the private corporation and its regulation This volume which contains a balanced collection of analyses from all interested sources in the corporate responsibility debate is the result of a three day conference during which government officials corporate executives NGOs and representatives of inter governmental organisations as well as academic researchers came together for the first time to discuss the emerging issues The essays have been arranged under six broad themes policy issues regulation issues of application matters of doctrine globalisation and case studies In addition each section contains the opinion not simply a summary of proceedings of a nominated rapporteur who draws together the strands of each theme and where necessary broadens the analysis to cover important issues which may not have been addressed At the heart of this volume is the attempt to define an effective framework for transnational corporate responsibility through international human rights standards It will be of vital interest to corporate legal advisers human rights practitioners NGOs government law offices and academics as well as to all those concerned with human rights and their place in the modern world
