Wijffels, 1999-11-19 This book contains full papers of both oral and poster presentations of the international symposium Marine Bioprocess Engineering which was held in Noordwijkerhout The Netherlands 1998 The symposium focused on the bioprocessing of marine natural products Bioprocess engineering has been the key to success in the commercialization of biotechnology especially with respect to biopharmaceuticals In marine biotechnology both new and existing biotechnological techniques are developed and applied to organisms from marine sources For marine biotechnology bioprocess engineering represents the link between discovery and commercialization The diversity of marine life points to a myriad of new bioproducts waiting to be discovered and developed commercially The volume begins to bridge the gap between the isolation of products from marine organisms in the laboratory and industrial applications by focusing on the bioprocess engineering aspects Reviews and recent developments in product discovery bio energy production cultivation of marine organisms scale up and product recovery are presented This publication should ensure that the engineering aspects of marine biotechnology will receive further attention in the future Exploration of new bioproducts from the ocean should be followed up by a sustainable exploitation of these valuable resources *International Symposium on Marine Biotechnology (ISMB 2000)* ,2000 **International Marine Biotechnology Conference** ,2005 *Grand Challenges in Marine Biotechnology* Pabulo H. Rampelotto, Antonio Trincone, 2018-05-15 This book serves as essential reading for research scientists and biotechnologists from both academia and industry working in marine biotechnology and related disciplines The book discusses recent advances and challenges in terms of science technology innovation and policy for the development of the field and how marine biotechnology may provide new solutions to some of the grand challenges faced by our society Written in an accessible language the book is also recommended as a reference text for decision makers in government and non governmental organizations in their efforts to foster the development of a global blue economy With less than 5 % of the vast and rich marine environment explored our seas and oceans represent a virtually unexplored resource for the discovery of novel product processes and development of bio inspired synthetic drugs with biotechnological potential As such the marine environment has been considered Earth's last frontier of exploration Recent advances in molecular techniques are providing the necessary tools to access on a larger scale the still untapped ocean resources and consequently unveil the promise of the blue biotechnology Governments are recognizing the potential of marine biotechnology to provide solutions to some of the Grand Challenges of the 21st Century such as sustainable energy and food sources identification of novel drugs for improved health treatments and providing new industrial materials and processes For this reason advances in marine biotechnology may foster the much needed source of innovation and economic growth in many countries and pave the way towards the development of a global blue economy i.e. a new economic model based on the sustainable exploration of our ocean ecosystems Proceedings of the 2nd Asia-Pacific Marine Biotechnology Conference and 3rd Asia-Pacific Conference
