Next Generation Environmental Models and Computational Methods George Delic, Mary Fanett Wheeler, 1997-01-01 Large scale changes are taking place in the way modelling is performed within the US

EPA and a new generation of environmental models is currently under construction The US EPA is engaging in several modelling efforts in response to Congressional mandates such as the Clean Air Act and the Clean Water Act These mandates require the scientific modelling of the impact of pollutants on human health and the environment The complexity of scale in environmental models has increased by several orders of magnitude with a simultaneous demand for increased stability accuracy and efficiency in the computed model solution This book showcases numerical algorithms appropriate to the subject areas listed below and explores how new algorithmic methods would benefit the US EPA s environmental models and other environmental studies

Proceedings of the 1995 ACM/IEEE Supercomputing Conference ;

Supercomputing '95, 1995 **Grid Computing** Fran Berman, Geoffrey Fox, Anthony J. G. Hey, 2003-04-18 Grid computing is applying the resources of many computers in a network to a single problem at the same time Grid computing appears to be a promising trend for three reasons 1 Its ability to make more cost effective use of a given amount of computer resources 2 As a way to solve problems that can't be approached without an enormous amount of computing power 3 Because it suggests that the resources of many computers can be cooperatively and perhaps synergistically harnessed and managed as a collaboration toward a common objective A number of corporations professional groups university consortiums and other groups have developed or are developing frameworks and software for managing grid computing projects The European Community EU is sponsoring a project for a grid for high energy physics earth observation and biology applications In the United States the National Technology Grid is prototyping a computational grid for infrastructure and an access grid for people Sun Microsystems offers Grid Engine software Described as a distributed resource management tool Grid Engine allows engineers at companies like Sony and Synopsys to pool the computer cycles on up to 80 workstations at a time the Grid is a very hot topic generating broad interest from research and industry e.g. IBM Platform Avaki Entropia Sun HP Grid architecture enables very popular e-Science projects like the Genome project which demand global interaction and networking In recent surveys over 50% of Chief Information Officers are expected to use Grid technology this year Grid Computing Features contributions from the major players in the field Covers all aspects of grid technology from motivation to applications Provides an extensive state of the art guide in grid computing This is essential reading for researchers in Computing and Engineering physicists statisticians engineers and mathematicians and IT policy makers *Recent Advances in Total Least Squares Techniques and Errors-in-variables Modeling* Sabine van Huffel, 1997-01-01 An overview of the computational issues statistical numerical and algebraic properties and new generalizations and applications of advances on TLS and EIV models Experts from several disciplines prepared overview papers which were presented at the conference and are included in this book **Linear and Nonlinear Conjugate Gradient-related Methods** Loyce M. Adams, John Lawrence Nazareth, 1996-01-01 Proceedings of the AMS IMS SIAM Summer Research Conference held at the University of Washington July 1995 Proceedings of the ... SIAM International Conference on Data Mining, 2005 Supercomputing Research Advances Yongge Huáng, 2008 Supercomputers are used for highly calculation intensive tasks such as problems involving quantum mechanical physics weather forecasting climate research including research into global warming molecular modelling computing the structures and properties of chemical compounds biological macromolecules polymers and crystals physical simulations such as simulation of aeroplanes in wind tunnels simulation of the detonation of nuclear weapons and research into nuclear fusion cryptanalysis and the like Major universities military agencies and scientific research laboratories are heavy users This book presents the latest research in the field from around the world
