Advances in Computers Marvin Zelkowitz, 2009-05-11. This is volume 75 of *Advances in Computers*. This series, which began publication in 1960, is the oldest continuously published anthology that chronicles the ever-changing information technology field. In these volumes, we publish from 5 to 7 chapters three times per year that cover the latest changes to the design, development, use, and implications of computer technology on society today. In this present volume, we present five chapters describing new technology affecting users of such machines. In this volume, we continue a theme presented last year in volume 72: High Performance Computing. In volume 72, we described several research projects being conducted in the United States on the development of a new generation of high performance supercomputers.

Dynamic Reconfigurable Architectures and Transparent Optimization Techniques Antonio Carlos Schneider Beck, Fl., Luigi Carro, 2010-03-10. *Dynamic Reconfigurable Architectures and Transparent Optimization Techniques* presents a detailed study on new techniques to cope with the aforementioned limitations. First, characteristics of reconfigurable systems are discussed in detail, and a large number of case studies is shown. Then, a detailed analysis of several benchmarks demonstrates that such architectures need to attack a diverse range of applications with very different behaviours, besides supporting code compatibility. This requires the use of dynamic optimization techniques such as Binary Translation and Trace reuse. Finally, works that combine both reconfigurable systems and dynamic techniques are discussed, and a quantitative analysis of one of them, the DIM architecture, is presented.

Reconfigurable System Design and Verification Pao-Ann Hsiung, Marco D. Santambrogio, Chun-Hsian Huang, 2018-10-08. Reconfigurable systems have pervaded nearly all fields of computation and will continue to do so for the foreseeable future. *Reconfigurable System Design and Verification* provides a compendium of design and verification techniques for reconfigurable systems, allowing you to quickly search for a technique and determine if it is appropriate to the task at hand. It bridges the gap between the need for reconfigurable computing education and the burgeoning development of numerous different techniques in the design and verification of reconfigurable systems in various application domains. The text explains topics in such a way that they can be immediately grasped and put into practice. It starts with an overview of reconfigurable computing architectures and platforms and demonstrates how to

develop reconfigurable systems This sets up the discussion of the hardware software and system techniques that form the core of the text The authors classify design and verification techniques into primary and secondary categories allowing the appropriate ones to be easily located and compared The techniques discussed range from system modeling and system level design to co simulation and formal verification Case studies illustrating real world applications detailed explanations of complex algorithms and self explaining illustrations add depth to the presentation Comprehensively covering all techniques related to the hardware software design and verification of reconfigurable systems this book provides a single source for information that otherwise would have been dispersed among the literature making it very difficult to search compare and select the technique most suitable The authors do it all for you making it easy to find the techniques that fit your system requirements without having to surf the net or digital libraries to find the candidate techniques and compare them yourself
