IPA – Concepts and Applications in Engineering Jerzy Pokojski, 2003-11-03 In professional practice many designers collect and maintain personal notes as guidelines about experiences and insights for handling technical problems and design situations An intelligent personal assistant IPA can act as a database for these notes making the entire design process more efficient Based on real industrial procedures this book contains practical examples for professionals and students interested in real implementations of knowledge based systems in engineering It integrates two major ideas a computer system integrating computer design tools and a computer system fulfilling the role of an intelligent personal assistant This user friendly approach to the main ideas concepts and techniques shows how an IPA can serve as a significant and fruitful knowledge based technique in engineering design *Proceedings of the ASME International Design Engineering Technical Conferences and Computers and Information in Engineering Conferences--2005* ,2005 [Sixth International Conference on Information Technology](#) , [Global Consistency of Tolerances](#) Fred van Houten, Hubert Kals, 2013-04-17 This book contains selected contributions from the 6th CIRP International Seminar on Computer Aided Tolerancing which was held on 22-24 March 1999 at the University of Twente Enschede The Netherlands This volume presents the theory and application of

consistent tolerancing Until recently CAD/CAM systems did not even address the issue of tolerances and focused purely on nominal geometry Therefore CAD data was only of limited use for the downstream processes The latest generation of CAD/CAM systems incorporates functionality for tolerance specification However the lack of consistency in existing tolerancing standards and everyday tolerancing practice still lead to ill defined products excessive manufacturing costs and unexpected failures Research and improvement of education in tolerancing are hot items today Global Consistency of Tolerances gives an excellent overview of the recent developments in the field of Computer Aided Tolerancing including such topics as tolerance specification tolerance analysis tolerance synthesis tolerance representation geometric product specification functional product analysis statistical tolerancing education of tolerancing computational metrology tolerancing standards and industrial applications and CAT systems This book is well suited to users of new generation CAD/CAM systems who want to use the available tolerancing possibilities properly It can also be used as a starting point for research activities

Integration of Process Knowledge into Design Support Systems Hubert Kals, Fred van Houten, 2013-04-17 Design is a fundamental creative human activity This certainly applies to the design of artefacts the realisation of which has to meet many constraints and ever raising criteria The world in which we live today is enormously influenced by the human race Over the last century these artefacts have dramatically changed the living conditions of humans The present wealth in very large parts of the world depends on it All the ideas for better and new artefacts brought forward by humans have gone through the minds of designers who have turned them into feasible concepts and subsequently transformed them into realistic product models The designers have been still are and will remain the leading change agents in the physical world Manufacturability of artefacts has always played a significant role in design In pre industrial manufacturing the blacksmith held the many design and realisation aspects of a product in one hand The synthesis of the design and manufacturing aspects took almost implicitly place in the head of the man All the knowledge and the skills were stored in one person Education and training took place along the line of many years of apprenticeship When the production volumes increased assembling to measure was no longer tolerated and production efficiency became essential design process planning production planning and fabrication became separated concerns The designers created their own world separated from the production world They argued that restrictions in the freedom of designing would badly influence their creativity in design

Dagli, 2000 Contains the 170 technical presentations from the November 2000 conference The papers focus on building smart components to engineering systems currently available The term smart in this context indicates physical systems that can interact with their environment and adapt to changes in both space and time In addition to the technologies stated in the volume title the papers also discuss adaptive control pattern recognition biology and medicine Topics include a neural network for segmentation of line drawings into lines of different orientations evolutionary synthesis of logic functions using multiplexers visualizing data association using self organizing feature maps a fuzzy knowledge model for estimating the depth of anesthesia prediction of welding droplet release using time series data mining and critical dimension control in semiconductor manufacturing Annotation copyrighted by Book News Inc Portland OR

Product Platform and Product Family Design Timothy W. Simpson, Zahed Siddique, Roger Jianxin Jiao, 2006-03-20 Designing products and product families so they may be customized for the global marketplace and achieving these goals in abbreviated time period while maintaining production efficiencies are the keys to successful manufacturing operations The research on these areas has matured rapidly over the last decade Today's highly competitive and volatile marketplace is reshaping the way many companies do business as rapid innovation and mass customization offer a new form of competitive advantage In response companies like Sony Black and Decker and Kodak have successfully implemented strategies to design and develop an entire family of products to satisfy a wide variety of customer requirements Product Platform and Product Family Design Methods and Applications discusses how product platform and product family design can be used successfully to increase variety within a product line shorten manufacturing lead times reduce overall costs within a product line The material available here will serve as both a reference and a hands on guide for practitioners involved in the design planning and production of
