Proceedings Of The Genetic And Evolutionary Computation Conference 99 01 Gecco:

Data Mining and Knowledge Discovery with Evolutionary Algorithms Alex A. Freitas, 2013-11-11 This book addresses the integration of two areas of computer science namely data mining and evolutionary algorithms Both these areas have become increasingly popular in the last few years and their integration is currently an area of active research In essence data mining consists of extracting valid comprehensible and interesting knowledge from data Data mining is actually an interdisciplinary field since there are many kinds of methods that can be used to extract knowledge from data Arguably data mining mainly uses methods from machine learning a branch of artificial intelligence and statistics including statistical pattern recognition Our discussion of data mining and evolutionary algorithms is primarily based on machine learning concepts and principles In particular in this book we emphasize the importance of discovering comprehensible interesting knowledge which the user can potentially use to make intelligent decisions In a nutshell the motivation for applying evolutionary algorithms to data mining is that evolutionary algorithms are robust search methods which perform a global search in the space of candidate solutions rules or another form of knowledge representation In contrast most rule induction methods perform a local greedy search in the space of candidate rules Intuitively the global search of evolutionary algorithms can discover interesting rules and patterns that would be missed by the greedy search

Genetic and Evolutionary Computation for Image Processing and Analysis Stefano Cagnoni, 2008 **Multiobjective Evolutionary Algorithms and Applications** Kay

Chen Tan, Eik Fun Khor, Tong Heng Lee, 2005-11-28 Multiobjective Evolutionary Algorithms and Applications provides comprehensive treatment on the design of multiobjective evolutionary algorithms and their applications in domains covering areas such as control and scheduling Emphasizing both the theoretical developments and the practical implementation of multiobjective evolutionary algorithms a profound mathematical knowledge is not required Written for a wide readership engineers researchers senior undergraduates and graduate students interested in the field of evolutionary algorithms and multiobjective optimization with some basic knowledge of evolutionary computation will find this book a useful addition to their book case Multi-objective Swarm Intelligence Satchidananda Dehuri, Alok Kumar Jagadev, Mrutyunjaya

Panda, 2015-03-10 The aim of this book is to understand the state of the art theoretical and practical advances of swarm intelligence It comprises seven contemporary relevant chapters In chapter 1 a review of Bacteria Foraging Optimization BFO techniques for both single and multiple criteria problem is presented A survey on swarm intelligence for multiple and many objectives optimization is presented in chapter 2 along with a topical study on EEG signal analysis Without compromising the extensive simulation study a comparative study of variants of MOPSO is provided in chapter 3 Intractable problems like subset and job scheduling problems are discussed in chapters 4 and 7 by different hybrid swarm intelligence techniques An attempt to study image enhancement by ant colony optimization is made in chapter 5 Finally chapter 7 covers the aspect of uncertainty in data by hybrid PSO *Metaheuristics for Dynamic Optimization* Enrique Alba, Amir Nakib, Patrick

Siarry,2012-08-11 This book is an updated effort in summarizing the trending topics and new hot research lines in solving dynamic problems using metaheuristics An analysis of the present state in solving complex problems quickly draws a clear picture problems that change in time having noise and uncertainties in their definition are becoming very important The tools to face these problems are still to be built since existing techniques are either slow or inefficient in tracking the many global optima that those problems are presenting to the solver technique Thus this book is devoted to include several of the most important advances in solving dynamic problems Metaheuristics are the more popular tools to this end and then we can find in the book how to best use genetic algorithms particle swarm ant colonies immune systems variable neighborhood search and many other bioinspired techniques Also neural network solutions are considered in this book Both theory and practice have been addressed in the chapters of the book Mathematical background and methodological tools in solving this new class of problems and applications are included From the applications point of view not just academic benchmarks are dealt with but also real world applications in logistics and bioinformatics are discussed here The book then covers theory and practice as well as discrete versus continuous dynamic optimization in the aim of creating a fresh and comprehensive volume This book is targeted to either beginners and experienced practitioners in dynamic optimization since we took care of devising the chapters in a way that a wide audience could profit from its contents We hope to offer a single source for up to date information in dynamic optimization an inspiring and attractive new research domain that appeared in these last years and is here to stay

Advances in Metaheuristics for Hard Optimization Patrick Siarry,Zbigniew Michalewicz,2007-12-06

Many advances have recently been made in metaheuristic methods from theory to applications The editors both leading experts in this field have assembled a team of researchers to contribute 21 chapters organized into parts on simulated annealing tabu search ant colony algorithms general purpose studies of evolutionary algorithms applications of evolutionary algorithms and metaheuristics

Artificial Intelligence in Design '00 John S. Gero,2012-12-06 Designing is one of the foundations for change in our society It is a fundamental precursor to manufacturing fabrication and construction Design research aims to develop an understanding of designing and to produce models of designing that can be used to aid designing The papers in this volume are from the Sixth International Conference on Artificial Intelligence in Design AID 00 held in June 2000 in Worcester Massachusetts USA They represent the state of the art and the cutting edge of research and development in this field and demonstrate both the depth and breadth of the artificial intelligence paradigm in design They point the way for the development of advanced computer based tools to aid designers and describe advances in both theory and application This volume will be of particular interest to researchers developers and users of advanced computer systems in design

Advances in Computational Intelligence Hans-Paul Schwefel,Ingo Wegener,K.D. Weinert,2013-03-09 The 30 coherently written chapters by leading researchers presented in this anthology are devoted to basic results achieved in computational intelligence since 1997 The book provides complete coverage of the core issues in the field especially in fuzzy

logic and control as well as for evolutionary optimization algorithms including genetic programming in a comprehensive and systematic way Theoretical and methodological investigations are complemented by prototypic applications for design and management tasks in electrical engineering mechanical engineering and chemical engineering This book will become a valuable source of reference for researchers active in computational intelligence Advanced students and professionals interested in learning about and applying advanced techniques of computational intelligence will appreciate the book as a useful guide enhanced by numerous examples and applications in a variety of fields

Nature Inspired Cooperative Strategies for Optimization (NICSO 2008) Natalio Krasnogor, Belén Melián-Batista, José Andrés Moreno-Pérez, J. Marcos Moreno-Vega, David Alejandro Pelta, 2009-09-14 The inspiration from Biology and the Natural Evolution process has become a research area within computer science For instance the description of the artificial neuron given by McCulloch and Pitts was inspired from biological observations of neural mechanisms the power of evolution in nature in the diverse species that make up our world has been related to a particular form of problem solving based on the idea of survival of the fittest similarly artificial immune systems ant colony optimisation automated self assembling programming membrane computing etc also have their roots in natural phenomena The first and second editions of the International Workshop on Nature Inspired Cooperative Strategies for Optimization NICSO were held in Granada Spain 2006 and in Acireale Italy 2007 respectively As in these two previous editions the aim of NICSO 2008 held in Tenerife Spain was to provide a forum where the latest ideas and state of the art research related to nature inspired cooperative strategies for problem solving were discussed The contributions collected in this book were strictly peer reviewed by at least three members of the international programme committee to whom we are indebted for their support and assistance The topics covered by the contributions include nature inspired techniques like Genetic Algorithms Ant Colonies Amorphous Computing Artificial Immune Systems Evolutionary Robotics Evolvable Systems Membrane Computing Quantum Computing Software Self Assembly Swarm Intelligence etc

Natural Computing Algorithms Anthony Brabazon, Michael O'Neill, Seán McGarraghy, 2015-10-08 The field of natural computing has been the focus of a substantial research effort in recent decades One particular strand of this research concerns the development of computational algorithms using metaphorical inspiration from systems and phenomena that occur in the natural world These naturally inspired computing algorithms have proven to be successful problem solvers across domains as diverse as management science bioinformatics finance marketing engineering architecture and design This book is a comprehensive introduction to natural computing algorithms suitable for academic and industrial researchers and for undergraduate and graduate courses on natural computing in computer science engineering and management science
