Rudge, 2022-09-08 One of many natural sign languages in use around the world British Sign Language BSL operates as a fully fledged semiotic system in the visual spatial modality through the simultaneous use of embodied articulators Filling a gap in current research this book investigates visual spatial communications from a functional perspective Presenting a description and analysis of BSL from the perspective of Hallidayan Systemic Functional Linguistics Luke A Rudge explores how BSL users make meaning from three different yet interrelated perspectives How exchanges of information are managed at a social level the interpersonal metafunction How experience is encoded in the language the experiential metafunction How communications are organised into coherent parts and wholes the textual metafunction Examining these perspectives both separately and together

Exploring British Sign Language via Systemic Functional Linguistics places them within the context of current observations in sign linguistics providing a complementary viewpoint on how visual spatial communications may be understood as social semiosis

Phonological Parsing in Speech Recognition K. Church, 2012-12-06 It is well known that phonemes have different acoustic realizations depending on the context Thus for example the phoneme t is typically realized with a heavily aspirated strong burst at the beginning of a syllable as in the word Tom but without a burst at the end of a syllable in a word like cat Variation such as this is often considered to be problematic for speech recognition 1 In most systems for sentence recognition such modifications must be viewed as a kind of noise that makes it more difficult to hypothesize lexical candidates given an input phonetic transcription To see that this must be the case we note that each phonological rule in a certain example results in irreversible ambiguity the phonological rule does not have a unique inverse that could be used to recover the underlying phonemic representation for a lexical item For example schwa vowels could be the first vowel in a word like about or the surface realization of almost any English vowel appearing in a sufficiently destressed word The tongue flap could have come from a t or a d 65 pp 548 549 This view of allophonic variation is representative of much of the speech recognition literature especially during the late 1970 s One can find similar statements by Cole and Jakimik 22 and by Jelinek 50
