<u>Practical Guide to the Assessment of the Useful Life of Plastics</u> R. Brown,John H. Greenwood,2002 After price and delivery time the most frequently asked question about a product is How long will it last Lifetime expectancy is often many years the service conditions may be complex and there is a scarcity of definitive data on durability The situation is complicated by the fact that there are a vast number of degradation agents service conditions properties of importance and different plastics There are many inherent difficulties in designing durability tests In many cases the time scale involved is such that accelerated test conditions are essential Whilst large amounts of durability data are generated by accelerated methods much of it is only useful for quality control purposes and relatively little has been validated as being realistically capable of representing service Most assessments of the lifetime of plastics are made by considering some measure of performance such as impact strength and specifying some lower limit for the property which is taken as the end point Lifetime is not necessarily measured in time For example for some products it will be thought of as the number of cycles of use The object of this publication is to provide practical guidance on assessing the useful service life of plastics It describes test procedures and extrapolation techniques together with the inherent limitations and problems The Guide aims to make available the wealth of information that can be applied to help maximise the effectiveness of a durability testing programme This guide seeks to be comprehensive but concentrates on the most common environmental effects causing degradation The test procedures used are outlined and the relevant textbooks and international standards are well referenced Examples of lifetime testing studies are cited The Practical Guide will be useful for anyone responsible for designing manufacturing or testing plastic components It will also be of benefit to suppliers and users of end products as assessment of useful lifetime is critical to the economics and safety aspects of any component Key features Test methods outlined Accelerated testing discussed Prediction methods described Standards cited Key sources of information listed   **The Directory of Directories** ,1985   **International Fire Safety Conference** Frca,2001-03-02   *Building Reliable Component-based Software Systems* Ivica Crnkovic,2002 Here s a complete guide to building reliable component based software systems Written by world renowned experts in the component based software engineering field this unique resource helps you manage complex software through the development evaluation and integration of software components You quickly develop a keen awareness of the benefits and risks to be considered when developing reliable systems using components A strong software engineering perspective helps you gain a better understanding of software component design to build systems with stronger requirements and avoid typical errors throughout the process leading to improved quality and time to market

Characterization and Failure Analysis of Plastics ASM International,Steve Lampman,2003-01-01 The selection and application of engineered materials is an integrated process that requires an understanding of the interaction between materials properties manufacturing characteristics design considerations and the total life cycle of the product This

reference book on engineering plastics provides practical and comprehensive coverage on how the performance of plastics is characterized during design property testing and failure analysis The fundamental structure and properties of plastics are reviewed for general reference and detailed articles describe the important design factors properties and failure mechanisms of plastics The effects of composition processing and structure are detailed in articles on the physical chemical thermal and mechanical properties Other articles cover failure mechanisms such as crazing and fracture impact loading fatigue failure wear failures moisture related failure organic chemical related failure photolytic degradation and microbial degradation Characterization of plastics in failure analysis is described with additional articles on analysis of structure surface analysis and fractography **Guide to American & International Directories** ,2006 **Engineering Plastics Handbook** James Margolis,2006 Product Developers have found a wide array of application for thermoplastics in the automotive interior and exterior parts business machines medical telecommunications equipment microwaveable packaging appliances and specialty uses However finding a material that can meet consumer demands is no small task While technological information is readily available regarding the general properties of common thermoplastic material there is no single authoritative source for building and evaluating new product lines Written by a top team of international experts this book will focus only on new and emerging engineering resin property requirements instead of properties of conventional engineering thermoplastics which are available from polymer producers and compounders This book will incorporate important chemical physical mechanical and applications for engineering thermoplastic in one place providing clear solutions to evaluate and compare existing product lines and with new and emerging products *Guide to American Directories* ,1960 *Components and Sub-Assemblies* C.G.
