An Anatomy of Thought Ian Glynn, 2003-04-10 Drawing on a dazzlingly wide array of disciplines physiology neurology psychology anthropology linguistics and philosophy Ian Glynn explains virtually every aspect of the workings of the brain unlocking the mysteries of the mind Here are the mechanics of nerve messages the functioning of sensory receptors the processes by which the brain sees tastes and smells the seats of language memory and emotions Glynn writes with exceptional clarity and offers telling examples to help explain vision for instance he discusses optical illusions as well as cases of patients who suffer disordered seeing through healthy eyes such as the loss of the ability to recognize familiar faces The breadth of Glynn s erudition is astonishing as he ranges from parallel processing in computers to the specialization of different regions of the brain illustrated with fascinating instances of the bizarre effects of localized brain damage He explains the different types of memory episodic and semantic as well as short term and implicit memory traces the path through the brain of information leading to emotional responses and engages in a discussion of language that takes in Noam Chomsky and Hawaiian pidgin Moreover for every subject Glynn addresses he offers a thorough going scientific history For example before discussing the evolution of the brain he provides an account of the theory of evolution itself from the writing and success of *The Origin of Species* to recent work on the fossil record DNA and RNA No other single volume has captured the full expanse of our knowledge of consciousness and the brain A work of unequalled authority and eloquence *An Anatomy of Thought* promises to be a new landmark of scientific writing

The Development of Face Processing in Infancy and Early Childhood Olivier Pascalis, Alan Slater, 2003 This book on face perception is one of the most researched areas in infancy and early childhood because of the enormous information that the face conveys to its viewer both in terms of the recognition of individuals and in the expressive information that faces convey It remains a complex area but a number of theoretical issues have emerged which motivate much of the current research This book describes many of these issues and

also presents some empirical research findings to illustrate the ways in which researchers carry out their investigations

Handbook of Research on Face Processing A.W. Young, H.D. Ellis, 2013-10-22 The high degree of scientific interest in face processing is readily understandable since people's faces provide such a wealth of social information. Moreover, investigations have produced evidence of highly precocious face processing abilities in infants and of neural mechanisms in adults that seem to be differentially involved in face perception. Such findings demonstrate that as one might expect, the psychological importance of the face has clear biological underpinnings. There are also urgent practical reasons for wanting to understand face processing. The most extensively investigated of these involve forensic issues. Other applications include the development of automated recognition systems for security and other purposes and understanding and rehabilitating disorders and impairments linked to brain injuries and psychiatric conditions. Current studies of face processing are grouped in the volume into eleven topic areas. For each area, the editors approached an acknowledged authority and commissioned a review chapter summarising the findings that have been made. These chapters were then circulated to other experts who were asked to write brief commentaries that developed theoretical or empirical points of importance to each area. In this way, a balanced coverage of each topic is achieved. The book begins with a section examining the evidence suggesting that there may be something special about face processing. This is followed by consideration of the face as a visual pattern. Then there are four sections dealing with major uses of facial information, followed by sections discussing the development of face processing abilities and the neural mechanisms involved. The last three sections of the book deal with topics for which there are important practical applications for the studies reported.

Staring Rosemarie Garland-Thomson, 2009-04-17 Drawing on examples from art, media, fashion, history, and memoir, cultural critic Rosemarie Garland-Thomson tackles a basic human interaction which has remained curiously unexplored: the human stare. In the first book of its kind, Garland-Thomson defines staring, explores the factors that motivate it, and considers the targets and the effects of the stare. While borrowing from psychology and biology to help explain why the impulse to stare is so powerful, she also enlarges and complicates these formulations with examples from the realm of imaginative culture. Featuring over forty illustrations, *Staring* captures the stimulating combination of symbolic material and emotional factors that make staring so irresistible while endeavoring to shift the usual response to staring—shame—into an engaged self-consideration. Elegant and provocative, this unique study advances new ways of thinking about visibility and the body that will appeal to readers who are interested in the overlap between the humanities and human behaviors.

Memory Bennett L. Schwartz, 2010-08-12 Covering cognitive experiments, patients with memory disorders, the areas of the brain involved in memory, and the cognitive theory that links this research together, *Memory: Foundations and Applications* offers a unique emphasis on how an understanding of the science of memory can be applied to education, police investigations, courtrooms, memory clinics, and everyday life. In addition, this innovative book shows students how to use these principles to improve their own ability to learn and remember.
