Bennett, 2012-12-02 Gene Manipulations in Fungi combines a review of classical fungal genetics contemporary research and responsible speculation about the future This book focuses on yeasts and molds because yeast is the primary model system for eukaryotes and that there is an elegant research on molds The applications of fungi including their economic importance are addressed The book emphasizes the need for improved transformation systems appropriate vectors and broadly applicable selectable markers in this field of interest This book will help stimulate the development of innovative approaches in this subject matter **GTPases Regulating Membrane Targeting and Fusion** W. E. Balch, Channing J. Der, Alan Hall, 2005-12-13 Rab GTPases now comprise a family of 63 members They are emerging as the key hub element controlling the membrane architecture of eukaryotic cells They are intimately involved in vesicle targeting and fusion in both the endocytic and exocytic pathways and direct the assembly and disassembly of protein complexes that include regulators GEFs and GAPs effectors tethers motors and fusion components SNAREs that control membrane targeting and fusion During the last 3 years the field has virtually exploded with the identification and characterization of many new Rab proteins and their effectors Our understanding of how Rab GTPases control membrane function remains at its infancy This volume of Methods in Enzymology GTPases Regulating Membrane Targeting and Fusion provides a wealth of new concepts approaches and tools to study Rab proteins in the test tube and in living cells that will be of strong benefit to both established laboratories and new investigators in the field to elucidate Rab GTPase function in cellular development differentiation and proliferation Comprehensive overview of Rab GTPase phylogeny
