Operations Research and Decision Aid Methodologies in Traffic and Transportation Management Martine Labbe, Gilbert Laporte, Katalin Tanczos, Philippe Toint, 2013-06-29 Every one relies on some kind of transportation system nearly every day Going to work shopping dropping children at school and many other cultural or social activities imply leaving home and using some form of transportation which we expect to be efficient and reliable Of course efficiency and reliability do not occur by chance but require careful and often relatively complex planning by transportation system managers both in the public and private sectors It has long been recognized that mathematics and more specifically operations research is an important tool of this planning process However the range of skills required to cover both fields even partially is very large and the opportunities to gather people with this very diverse expertise are too few The organization of the NATO Advanced Studies Institute on Operations Research and Decision Aid Methodologies in Traffic and Transportation Management in March 1997 in Balatonfured Hungary was therefore more than welcome and the group of people that gathered for a very studious two weeks on the shores of the beautiful lake Balaton did really enjoy the truly multidisciplinary and high scientific level of the meeting The purpose of the present volume is to report in a chronological order the various questions that were considered by the lecturers and the students at the institute After a general introduction to the topic the first week focused on issues related to traffic modeling mostly in an urban context **Entrepreneurship in Power**
