Recursive Model Theory, 1998-11-30 **Recursive Model Theory** **Handbook of Computability Theory** E.R. Griffor, 1999-10-01 The chapters of this volume all have their own level of presentation The topics have been chosen based on the active research interest associated with them Since the interest in some topics is older than that in others some presentations contain fundamental definitions and basic results while others relate very little of the elementary theory behind them and aim directly toward an exposition of advanced results Presentations of the latter sort are in some cases restricted to a short survey of recent results due to the complexity of the methods and proofs themselves Hence the variation in level of presentation from chapter to chapter only reflects the conceptual situation itself One example of this is the collective efforts to develop an acceptable theory of computation on the real numbers The last two decades has seen at least two new definitions of effective operations on the real numbers **Recursion Theory Week** Klaus Ambos-Spies, Gert H. Müller, Gerald E. Sacks, 2006-11-14 These proceedings contain research and survey papers from many subfields of recursion theory with emphasis on degree theory in particular the development of frameworks for current techniques in this field Other topics covered include computational complexity theory generalized recursion theory proof theoretic questions in recursion theory and recursive mathematics Classical Descriptive Set Theory Alexander Kechris, 2012-12-06 Descriptive set theory has been one of the main areas of research in set theory for almost a century This text attempts to present a largely balanced approach which combines many elements of the different traditions of the subject It includes a wide variety of examples exercises over 400 and applications in order to illustrate the general concepts and results of the theory This text provides a first basic course in classical descriptive set theory and covers material with which mathematicians interested in the subject for its own sake or those that wish to use it in their field should be familiar Over the years researchers in diverse areas of mathematics such as logic and set theory analysis topology probability theory etc have brought to the subject of descriptive set theory their own intuitions concepts terminology and notation **Recursive Algebra, Analysis and Combinatorics**, 1998-11-30 **Recursive Algebra Analysis and Combinatorics** *Computability Theory and Its Applications* Peter Cholak, 2000 This collection of articles presents a snapshot of the status of computability theory at the end of the millennium and a list of fruitful directions for future research The papers represent the works of experts in the field who were invited speakers at the AMS IMS SIAM 1999 Summer Conference on Computability Theory and Applications which focused on open problems in computability theory and on some related areas in which the ideas methods and or results of computability theory play a role Some presentations are narrowly focused others cover a wider area Topics included from pure computability theory are the computably enumerable degrees M Lerman the computably enumerable sets P Cholak R Soare definability issues in the c_e and Turing degrees A Nies R Shore and other degree structures M Arslanov S Badaev and S Goncharov P Odifreddi A Sorbi The topics involving relations between computability and other areas of logic and mathematics are reverse mathematics and

L. Bryant, 2006-11-15 The DD6 Symposium was like its predecessors DD1 to DD5 both a research symposium and a summer seminar and concentrated on differential geometry This volume contains a selection of the invited papers and some additional contributions They cover recent advances and principal trends in current research in differential geometry

Logic and Combinatorics Stephen George Simpson, 1987 *Stochastic Analysis and Related Topics* Hayri

Korezlioglu, Ali S. Ustunel, 2006-11-14 The Silvri Workshop was divided into a short summer school and a working conference producing lectures and research papers on recent developments in stochastic analysis on Wiener space The topics treated in the lectures relate to the Malliavin calculus the Skorohod integral and nonlinear functionals of white noise Most of the research papers are applications of these subjects This volume addresses researchers and graduate students in stochastic processes and theoretical physics **Around Classification Theory of Models** Saharon Shelah, 2006-12-08 **Logical**
