Red Sea Safety Guide To Dangerous Marine Animals:

Red Sea Safety Peter Vine, 1986 Medical Emergencies Caused by Aquatic Animals Vidal Haddad Jr, 2016-09-08 The present book is intended as a reference guide for emergency and ambulatory care medicine providing essential information on the most important problems and incidents caused by venomous poisoning and traumatic marine and freshwater animals. Indeed though emergencies caused by aquatic animals are becoming increasingly common there are few reference books devoted to providing medical guidance on them. The book includes a wealth of original images of injuries caused by aquatic animals while the text covers the current state knowledge on the subject including the identification of the animals, the clinical aspects of the envenomation poisonings, injuries, first aid and emergency care, main treatment alternatives and a typical case representing each group of animals. Chapters are organized according to zoological groups: Marine and Freshwater Invertebrates (Porifera, Cnidarians, Annelida, Mollusks, Echinodermata) and Marine and Freshwater Vertebrates (Fish and Reptiles). Medical Emergencies Caused By Aquatic Animals: A Zoological and Clinical Guide is intended for students and professionals in Medicine, Dermatology, Tropical Medicine, Infectious Diseases and Emergency Medicine and the Biological Sciences, Zoology and Ecology as well as to practicing professionals working in coastal or freshwater areas.

Invasive Species and Human Health Giuseppe Mazza, Elena Tricarico, 2018-07-13 Invasive alien plants and animals are known for their disruption of ecosystems and threat to biodiversity. This book highlights their major impact on human health. This includes not only direct effects through contact with the species via bites, wounds and disease but also indirect effects caused by changes induced in ecosystems by invasive species such as more water hyacinth, increasing mosquito levels and thereby the potential for malaria. Covering a wide range of case studies from different taxa (animals and plants) and giving an overview of the diverse impacts of invasive species on health in developed and developing countries, the book is a significant contribution that will help in prioritizing approaches to controlling invasive species and mitigating their health effects. It covers invasive plants, marine species, spiders and other arachnids, ticks and dust mites, insects, mosquitos and other diptera, freshwater species, invertebrates and fishes, amphibians and reptiles, birds and mammals. The broad spectrum of the analyzed case studies will ensure the appeal of the book to a wide public including researchers of biological invasions, doctors, policy makers and managers and students of invasive species in ecology, animal and plant biology and public health medicine.

Marine Coastal Eutrophication R.A. Vollenweider, R. Marchetti, R. Viviani, 2016-04-06 Eutrophication in the transitional marine coastal waters has increased dramatically in many parts of the world and this evolution has shifted attention to the anthropogenic factor. The problem has become the theme of many conferences and workshops as well as being given priority in international organizations. This volume has been brought about by the desire to assess both our scientific understanding as well as the means and technologies available to combat the problem of marine coastal eutrophication. It discusses the results of research and surveillance programmes carried out in the last decades confronting these results with experience.
